

# C1000-189덤프IBM인증시험

참고: Fast2test에서 Google Drive로 공유하는 무료 2026 IBM C1000-189 시험 문제집이 있습니다:  
<https://drive.google.com/open?id=1B8WwqfiLAAP1lkDQaltZbWN4nJ6xAYWn>

IBM인증C1000-189시험은 IT인증시험과목중 가장 인기있는 시험입니다. Fast2test에서는IBM인증C1000-189시험에 대비한 공부가이드를 발췌하여 IT인사들의 시험공부 고민을 덜어드립니다. Fast2test에서 발췌한 IBM인증C1000-189덤프는 실제시험의 모든 범위를 커버하고 있고 모든 시험유형이 포함되어 있어 시험준비 공부의 완벽한 선택입니다.

## IBM C1000-189 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> <li>• Security and Compliance: This section of the exam measures the skills of IT Security Analysts and focuses on the data protection and compliance aspects of Instana deployment. Candidates must describe and implement data retention policies, plan for regulatory compliance, secure APIs, manage user access, and interpret audit logs. The goal is to ensure secure system configurations that align with organizational and regulatory standards.</li> </ul>
주제 2	<ul style="list-style-type: none"> <li>• Operations: This section of the exam measures the skills of Application Monitoring Specialists and covers daily operational tasks for managing Instana environments. It includes configuring website and application monitoring, handling synthetic monitoring, and creating incidents, issues, and alerts. Candidates will analyze infrastructure performance, set maintenance windows, and design custom dashboards. They are also expected to interpret golden signals, evaluate alerts, use analytics, and perform backup or restore operations to maintain optimal system performance.</li> </ul>
주제 3	<ul style="list-style-type: none"> <li>• Troubleshooting: This section of the exam measures the skills of System Support Engineers and focuses on resolving technical and operational issues in Instana. It includes configuring log levels, collecting logs for debugging, and identifying connectivity issues between agents and the backend. Candidates will troubleshoot installation failures, diagnose communication problems, and apply corrective measures to ensure consistent Instana performance and stability across environments.</li> </ul>
주제 4	<ul style="list-style-type: none"> <li>• Integration: This section of the exam measures the skills of Integration Engineers and assesses their proficiency in connecting Instana with external monitoring and automation tools. Candidates must demonstrate knowledge of integrating agent-based systems such as Omegamon, ITM, and ITCAM, as well as external platforms like Prometheus and Grafana. The section also includes configuring alert channels, automation actions, and utilizing the Instana REST API to support customized workflows and data visibility.</li> </ul>

주제 5	<ul style="list-style-type: none"> <li>• Configuration: This section of the exam measures the skills of DevOps Administrators and evaluates their ability to configure and optimize Instana operational settings. It involves setting up business process monitoring, configuring both cloud and serverless agents, and defining agent proxy parameters. Candidates will learn to implement various technologies and sensors, manage OpenTelemetry integrations, set up smart alerts, create service naming rules, and define custom SLIs and payloads for alert channels. Managing licenses and ensuring proper configuration of alerts and notifications are also key components of this domain.</li> </ul>

## C1000-189퍼펙트 최신버전 자료 - C1000-189퍼펙트 덤프문제

IBM C1000-189인증시험은 현재IT인사들 중 아주 인기 있는 인증시험입니다. IBM C1000-189시험패스는 여러분의 하시는 일과 생활에서 많은 도움을 줄뿐만 아니라 중요한 건 여러분의IT업계에서의 자기만의 자리를 지키실 수 있습니다. 이렇게 좋은 시험이니 많은 분들이 응시하려고 합니다, 하지만 패스율은 아주 낮습니다.

### 최신 IBM Instana Observability C1000-189 무료샘플문제 (Q52-Q57):

#### 질문 # 52

Which responsibilities align with the DevOps persona in Instana and how does it assist in fulfilling these responsibilities?

- A. Managing on-premises IT infrastructure performance and optimization
- B. Configuring infrastructure dependencies to ensure smooth application deployment
- C. Developing new microservices and applications without worrying about infrastructure provisioning
- D. Ensuring application stability and security by automating alerting, incident mitigation, and monitoring configuration data updates

정답: D

#### 설명:

Instana documentation differentiates user personas, with the DevOps role centered on continuous improvement, automation, and reliability engineering. The IBM guide specifies: "DevOps roles use Instana to ensure application stability and security through automated alerting, incident management workflows, and adaptive configuration updates." Instana assists DevOps teams by detecting anomalies immediately through Smart Alerts, contextual health signatures, and automated remediation routines (via actions or webhooks). These functions align with Site Reliability Engineering practices, aiming to ensure service quality while enforcing rapid feedback loops. Automated configuration data updates synchronize agent sensors and dependencies without manual intervention, supporting faster CI/CD cycles. This differs from infrastructure or developer-focused responsibilities-here, emphasis is on achieving observability at scale for system operations. The integration of performance metrics, distributed tracing, and intelligent alerting allows DevOps teams to iterate on monitoring configurations alongside continuous deployment, keeping microservice systems stable under constant change.

#### 질문 # 53

In context of Golden Signals in Instana monitoring, what is the true definition of latency?

- A. How long does it take to open a webpage
- B. How long does it take to login to mobile application
- C. How many errors are there in one HTTP request
- D. How long it takes to handle or service a particular request

정답: D

#### 설명:

Latency is one of the four principal Golden Signals monitored in Instana and critical for measuring system performance and user experience. According to IBM Instana Observability documentation: "Latency is the time it takes to handle or service a request, measured as the duration between request start and response end." This applies regardless of protocol (HTTP, RPC, messaging, etc.) and is used to evaluate whether services are fast or slow under real load. Instana automatically tracks latency for every transaction, as shown in traces and metrics: this enables teams to identify slow services, resource contention, and downstream

delays. Golden Signals (latency, error rate, traffic, saturation) provide a universal framework recognized in both SRE and performance engineering disciplines. The actual duration a user spends logging in or opening a webpage may be an instance of latency, but Instana's definition is generalized to any service request (API, DB, etc.), not just interactive browser events. Error count is monitored separately (error signal).

#### 질문 # 54

Which tool does Instana use to provide geographical data by mapping user IP addresses?

- A. Google Maps API
- B. Universal Geo database
- C. Geo Application Service
- D. **GeoLite2 database**

정답: D

#### 설명:

IBM Instana leverages the open-source and widely recognized GeoLite2 database for mapping user IP addresses to their approximate physical locations in synthetic and real user monitoring scenarios. The documentation details: "Instana provides geographical and location metadata based on the GeoLite2 database, which is regularly updated for improved accuracy and privacy compliance." GeoLite2 is a MaxMind-developed database providing country, city, region, and sometimes ISP-level information from IP addresses. Using an on-premise and regularly-curated geo database ensures no end-user data is ever transmitted to external or third-party web mapping services (such as Google Maps), maintaining strong data privacy and compliance for enterprise customers. Other listed tools are not native to Instana's geo lookup implementation.

#### 질문 # 55

What prevents Ansible actions from manual deletion within Instana?

- A. **Default Actions cannot be deleted.**
- B. There is no name specified on the action.
- C. The action is active.
- D. Actions have been imported.

정답: A

#### 설명:

IBM Instana documentation is explicit: some action definitions, including default and built-in (such as Ansible) actions supplied by the platform, cannot be manually deleted by users or admins. It states: "Default Actions-including Ansible integration actions pre-defined by Instana-are protected from manual deletion to ensure availability and platform integrity." This ensures that core automation integrations remain functional and the baseline for remediations, regardless of user error or misconfiguration. Custom or imported actions can be removed, but defaults-tagged as such in the UI-are non-removable, safeguarding operational continuity and maintaining standardized integrations across manual and automated workflows. Active status or name presence does not impact deletion ability; it is the default/built-in status (D) that enforces this lock.

#### 질문 # 56

Which action is required to enable features in the Instana Self-Hosted Custom Edition?

- A. Add feature flags in the configuration file for the units.
- B. Restart the backend.
- C. Modify the deployment settings.
- D. **Add feature flags in the configuration file for the core.**

정답: D

#### 설명:

Enabling advanced features in Instana Self-Hosted Custom Edition requires administrators to add or adjust feature flags in the core configuration file, as per IBM's setup documentation. Specifically: "Feature enablement in Instana Self-Hosted Custom Edition is controlled via feature flags set in the core configuration file, allowing platform-wide updates at startup." Modifying deployment settings may affect resources or endpoints but does not toggle internal features. Unit-level configuration affects only specific

microservices, not centralized capabilities. Restarting the backend is necessary after changing configuration but is not itself a feature-enabling action. The central core configuration file, located under the main configuration directory, contains comprehensive toggles for features spanning UI, backend, and data processing pipelines. Only changes made here and saved with appropriate syntax will activate platform features on next start or reload.

## 질문 # 57

.....

Fast2test 의 IT전문가들이 자신만의 경험과 끊임없는 노력으로 최고의 IBM C1000-189학습자료를 작성해 여러분들이 IBM C1000-189시험에서 패스하도록 최선을 다하고 있습니다. 덤프는 최신 시험문제를 커버하고 있어 시험패스율이 높습니다. IBM C1000-189시험을 보기로 결심한 분은 가장 안전하고 가장 최신인 적응율 100%에 달하는 IBM C1000-189시험대비덤프를 Fast2test에서 받을 수 있습니다.
