Microsoft Power Platform Functional Consultant Sample Questions (Q292-Q297):

NEW QUESTION # 292

You create several recordings of the actions you perform on your computer and group these recordings into activities by using Process Advisor. You complete the analysis of the recordings and want to know insights about the specific path. What are two visuals on the Process Analytics screen that can help you achieve your goal?

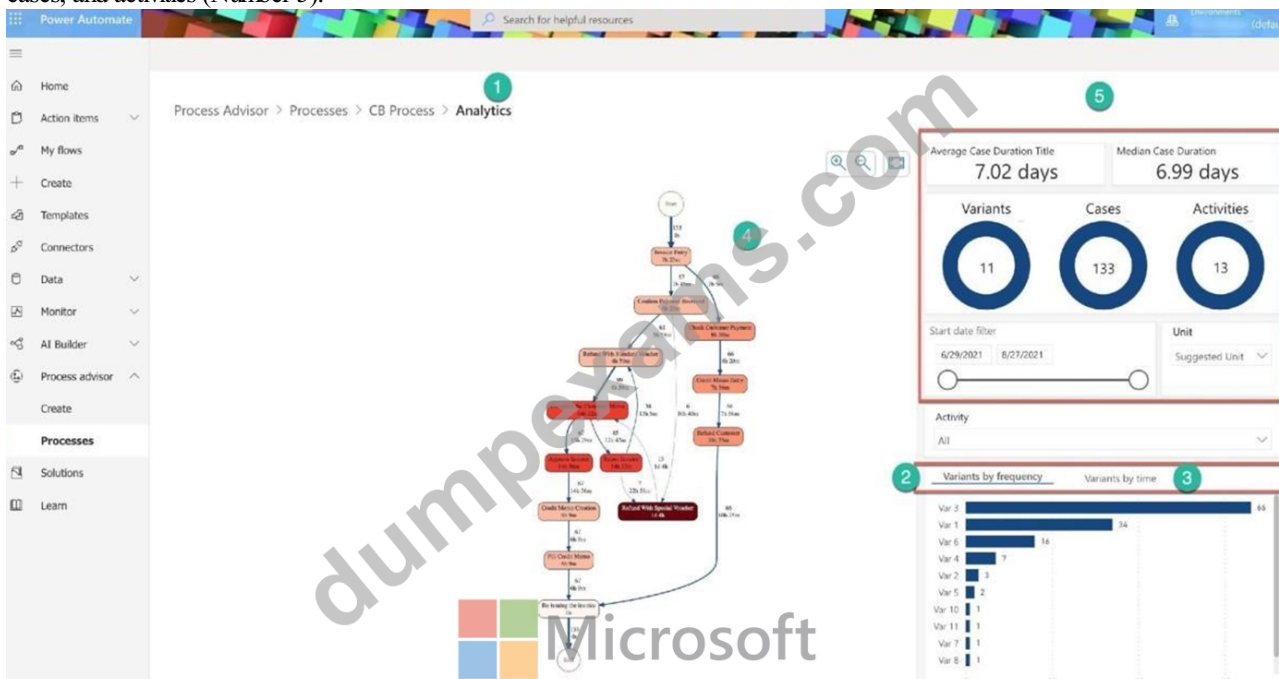

- A. Variants by time
- B. Average time
- C. Variants by frequency
- D. Recordings by time in min
- E. Number of recordings

Answer: A,C

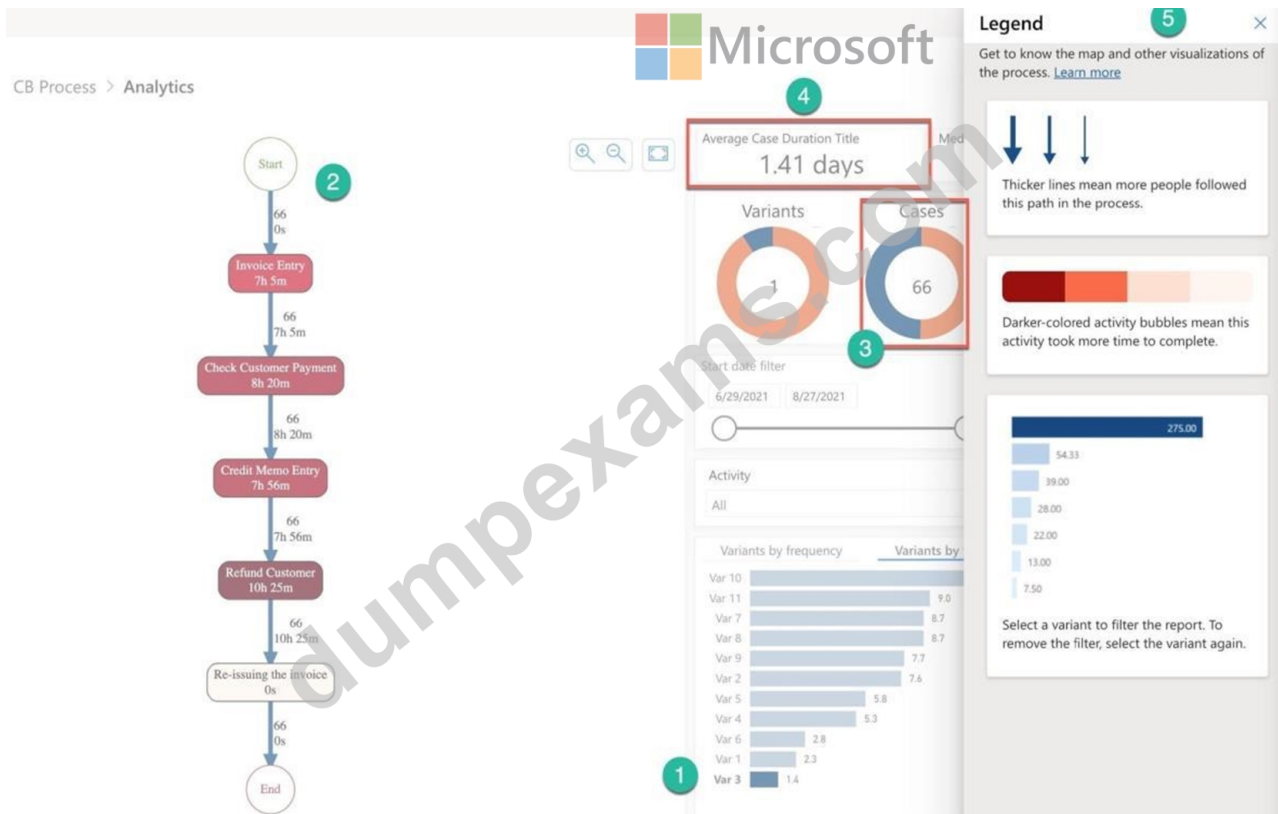

Explanation:

To investigate the specific path or variant on the Process Analytics screen (Number 1), you need to compare data on two visuals: Variants by frequency (Number 2) and Variants by time (Number

3). The Variants by frequency presents the number of cases for a specific path, e.g., Variant 3 occurred in 66 cases. The process map outlines all the paths for the process (Number 4). The screen presents additional process information as the number of variants, cases, and activities (Number 5).

If you click on the variant bar in the "Variants by ..." visuals (Number 1), the map will be updated and show the path for the selected variant, e.g., variant 3 (Number 2). As you can see from the "Variants by frequency" visual (or on the number of cases card when you selected the variant (Number 3)) the variant 3 has the most cases - 66 and took the less average throughput time per average case - 1.41 days to execute (Number 1 and Number 4). You can always invoke the Legend panel (Number 5) by clicking on the Legend button in the right upper corner of the Analytics screen. The panel explains the visualizations' markings and colors.

NEW QUESTION # 293

On a Contact record, a user creates a Note record that contains the word running. One week later, the user reports that they cannot find the Contact record associated with the Note record. You need to find the Note record.

Solution: Use Relevance Search to search for the word run.

Does the solution meet the goal?

- A. No
- B. Yes

Answer: B

NEW QUESTION # 294

A company uses Common Data Service to store sales data.

For the past few quarters, the company has experienced a decrease in sales revenue. The company wants to improve sales forecasting.

The company plans to use AI Builder to implement the solution. You select fields that will be used for prediction.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Answer Area

Export data from Common Data Service into Microsoft Excel

Train the category classification AI model by using Common Data Service data

Train the AI model by using data exported to Microsoft Excel

Publish the AI model

Use the model with Power Apps

Import the AI model analysis into Common Data Service

Train the prediction AI model by using Common Data Service data

Answer:

Explanation:

Actions

Answer Area

Export data from Common Data Service into Microsoft Excel

Train the category classification AI model by using Common Data Service data

Train the AI model by using data exported to Microsoft Excel

Publish the AI model

Use the model with Power Apps

Import the AI model analysis into Common Data Service

Train the prediction AI model by using Common Data Service data

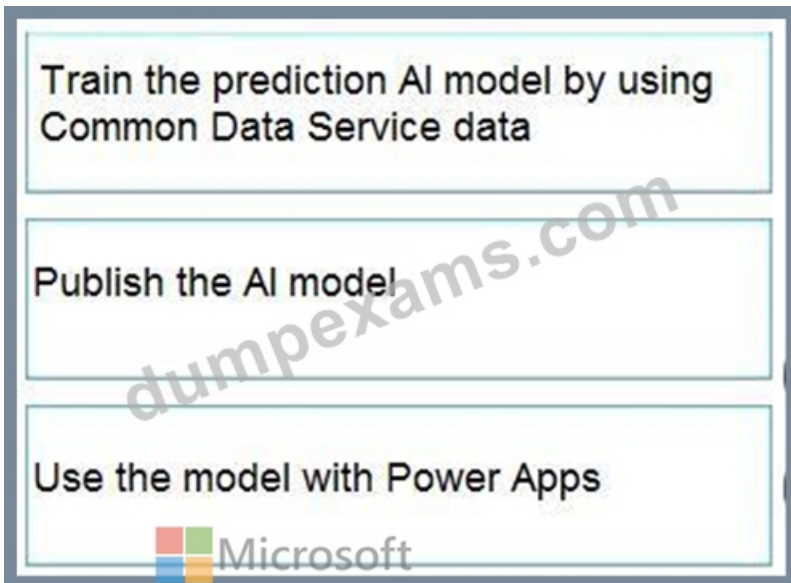

Train the prediction AI model by using Common Data Service data

Publish the AI model

Use the model with Power Apps

Explanation:

Step 1:

Before you can use your prediction model, you have to train it to perform the way you want.

Step 2:

After you train your model, publish it to make it available.

Publish your model when you want to make it available to users in your Power Apps environment.

Step 3: Use the model with Power Apps
