**FORTINET**

Which value would you expect the FortiSIEM parser to use to populate the Application Name field?

- A. wan1
- **B. SSL**
- C. applist
- D. Network.Service

**Answer: B**

Explanation:

The Application Name field in FortiSIEM is typically populated using the value of the app field in the raw log. In this event, app="SSL", so "SSL" is the expected application name parsed by FortiSIEM.

#### NEW QUESTION # 36

You need a model that predicts a target field based on other fields in a dataset and then triggers an anomaly if the value does not match the prediction. Which machine learning (ML) algorithm will you use to build this type of model?

- A. Classification
- B. Anomaly detection
- C. Forecasting
- **D. Regression**

**Answer: D**

Explanation:

Regression models predict the value of a target field using other fields as predictors. FortiSIEM can then generate anomalies when the observed value significantly deviates from the predicted value.

#### NEW QUESTION # 37

Which data collection method generates the most comprehensive information for FortiSIEM user entity and behavior analytics (UEBA) models?

- **A. Windows UEBA agent**
- B. Windows Sysmon
- C. Linux log
- D. FortiSIEM Linux agent

**Answer: A**

Explanation:

The Windows UEBA agent collects detailed user activity and endpoint behavior data specifically designed for FortiSIEM UEBA analytics. It provides richer telemetry for behavioral modeling, anomaly detection, and user activity correlation than standard logs or general-purpose agents.

#### NEW QUESTION # 38

An analyst wants the rule shown in the exhibit to trigger when three failed login attempts occur within three minutes. What should the values be for the condition time window and aggregate count?

- A. Time window 90 seconds, aggregate count 3
- B. Time window 180 seconds, aggregate count 2
- C. Time window 90 seconds, aggregate count 2
- D. Time window 180 seconds, aggregate count 3

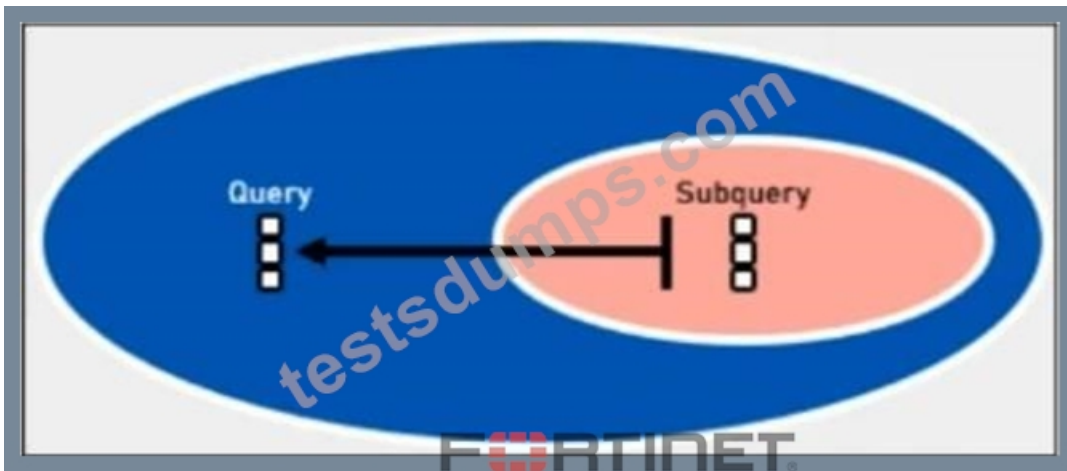

**Answer: D**

Explanation:

To detect three failed login attempts within three minutes, you must set the aggregate count to 3 in the subpattern and the time window to 180 seconds in the rule condition. This ensures the rule triggers only if three or more failed logins occur in that timeframe.

**NEW QUESTION # 39**

Refer to the exhibit. Which two lookup types can you reference as the subquery in a nested analytics query? (Choose two.)

- A. LDAP query
- B. API query
- C. CMDB query
- D. Event query

**Answer: C,D**

Explanation:

FortiSIEM nested analytics queries support CMDB queries and Event queries as subqueries.

These lookup types allow the main query to reference results returned from event data or CMDB- based datasets.
