

# Use Actual Microsoft SC-100 to Prevent Mental Hassle

BONUS!!! Download part of PrepAwayExam SC-100 dumps for free: <https://drive.google.com/open?id=1xnRgMDpEYyotoVI7SXkHRCG5MeOO1x1X>

Passing the SC-100 exam with least time while achieving aims effortlessly is like a huge dream for some exam candidates. Actually, it is possible with our proper SC-100 learning materials. To discern what ways are favorable for you to practice and what is essential for exam syllabus, our experts made great contributions to them. All SC-100 Practice Engine is highly interrelated with the exam. You will figure out this is great opportunity for you. Furthermore, our SC-100 training quiz is compiled by professional team with positive influence and reasonable price

## What is the salary of the Microsoft SC-100 Certification Exam

The Average salary of different countries of Microsoft SC-100 Certified Expert

- India: INR 776,970 per year
- United States: USD 116,178 per year
- UK: Pounds 45,280 per year

## Exam SC-100 Study Guide - Exam SC-100 Fees

PrepAwayExam provides latest SC-100 practice exam questions and SC-100 certifications training material products for all those customers who are looking to pass SC-100 exams. There is no doubt that the SC-100 exams can be tough and challenging without valid SC-100 brain dumps. We offer the guaranteed success with high marks in all SC-100 exams. Our multiple SC-100 certifications products let customers prepare and assess in the best way possible. We provide in-depth SC-100 Study Material in the form of SC-100 PDF dumps questions answers that will allow you to prepare yourself for the exam. SC-100 exams PDF question answers also come with one year free update. We also provide live support chat to all our customers who have concerns about SC-100 exams.

The SC-100 certification exam covers a wide range of topics related to cybersecurity, such as threat management, identity and access management, security operations, and data and application protection. SC-100 exam includes multiple-choice questions and performance-based tasks that require you to demonstrate your ability to solve real-world cybersecurity problems. SC-100 Exam is designed to test your knowledge and skills in Microsoft technologies, including Azure, Microsoft 365, and Windows 10.

## Microsoft Cybersecurity Architect Sample Questions (Q14-Q19):

### NEW QUESTION # 14

You have an Azure DevOps organization that is used to manage the development and deployment of internal apps to multiple Azure subscriptions.

You need to implement a DevSecOps strategy based on Microsoft Cloud Adoption Framework for Azure principles. The solution must meet the following requirements:

- \* All pull requests must be enforced.
- \* All deployments to production must be approved.

What should you include in the solution for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

All pull requests must be enforced: Protected branches  
Environments  
Protected branches  
Resource locks

All deployments to production must be approved: Environments  
Environments  
Resource locks  
Triggers

**Answer:**

**Explanation:**

Answer Area

All pull requests must be enforced: Protected branches  
Environments  
Protected branches  
Resource locks

All deployments to production must be approved: Environments  
Environments  
Resource locks  
Triggers

**Explanation:**

Answer Area

All pull requests must be enforced: Protected branches

All deployments to production must be approved: Environments

### NEW QUESTION # 15

Your company has an Azure subscription that has enhanced security enabled for Microsoft Defender for Cloud.

The company signs a contract with the United States government.

You need to review the current subscription for NIST 800-53 compliance.

What should you do first?

- A. From Defender for Cloud, enable Defender for Cloud plans.
- B. From Defender for Cloud, review the secure score recommendations.
- C. From Defender for Cloud, review the Azure security baseline for audit report.
- **D. From Defender for Cloud, add a regulatory compliance standard.**

**Answer: D**

Explanation:

Add a regulatory standard to your dashboard

The following steps explain how to add a package to monitor your compliance with one of the supported regulatory standards.

Add a standard to your Azure resources

1. From Defender for Cloud's menu, select Regulatory compliance to open the regulatory compliance dashboard. Here you can see the compliance standards currently assigned to the currently selected subscriptions.
2. From the top of the page, select Manage compliance policies. The Policy Management page appears.
3. Select the subscription or management group for which you want to manage the regulatory compliance posture.
4. To add the standards relevant to your organization, expand the Industry & regulatory standards section and select Add more standards.
5. From the Add regulatory compliance standards page, you can search for any of the available standards:

6. Select Add and enter all the necessary details for the specific initiative such as scope, parameters, and remediation.

7. From Defender for Cloud's menu, select Regulatory compliance again to go back to the regulatory compliance dashboard.

Your new standard appears in your list of Industry & regulatory standards.

Note: Customize the set of standards in your regulatory compliance dashboard.

Microsoft Defender for Cloud continually compares the configuration of your resources with requirements in industry standards, regulations, and benchmarks. The regulatory compliance dashboard provides insights into your compliance posture based on how you're meeting specific compliance requirements.

<https://docs.microsoft.com/en-us/azure/defender-for-cloud/update-regulatory-compliance-packages>

## NEW QUESTION # 16

You need to recommend a solution to meet the requirements for connections to ClaimsDB.

What should you recommend using for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

The screenshot shows the 'Answer Area' for a question. The question text is: 'ClaimsDB must be accessible only from Azure virtual networks:'. Below this, there are two requirements and their corresponding options. The first requirement is 'ClaimsDB must be accessible only from Azure virtual networks:'. The options for this requirement are: 'A NAT gateway', 'A network security group', 'A private endpoint', and 'A service endpoint'. The second requirement is 'The app services permission for ClaimsApp must be assigned to ClaimsDB:'. The options for this requirement are: 'A custom role-based access control (RBAC) role', 'A managed identity', 'An access package', and 'Azure AD Privileged Identity Management (PIM)'. The Microsoft logo is visible in the top right corner of the answer area.

Answer:

Explanation:

Answer Area

Microsoft

ClaimsDB must be accessible only from Azure virtual networks:

- A NAT gateway
- A network security group
- A private endpoint
- A service endpoint

The app services permission for ClaimsApp must be assigned to ClaimsDB:

- A custom role-based access control (RBAC) role
- A managed identity
- An access package
- Azure AD Privileged Identity Management (PIM)

## Topic 1, Fabrikam, Inc Case Study 1

### Overview

Fabrikam, Inc. is an insurance company that has a main office in New York and a branch office in Paris.

### On-premises Environment

The on-premises network contains a single Active Directory Domain Services (AD DS) domain named corp.fabrikam.com.

### Azure Environment

Fabrikam has the following Azure resources:

- \* An Azure Active Directory (Azure AD) tenant named fabrikam.onmicrosoft.com that syncs with corp.fabrikam.com
- \* A single Azure subscription named Sub1
- \* A virtual network named Vnet1 in the East US Azure region
- \* A virtual network named Vnet2 in the West Europe Azure region
- \* An instance of Azure Front Door named FD1 that has Azure Web Application Firewall (WAR) enabled
- \* A Microsoft Sentinel workspace
- \* An Azure SQL database named ClaimsDB that contains a table named ClaimDetails
- \* 20 virtual machines that are configured as application servers and are NOT onboarded to Microsoft Defender for Cloud
- \* A resource group named TestRG that is used for testing purposes only
- \* An Azure Virtual Desktop host pool that contains personal assigned session hosts. All the resources in Sub1 are in either the East US or the West Europe region.

### Partners

Fabrikam has contracted a company named Contoso, Ltd. to develop applications. Contoso has the following infrastructure-

- \* An Azure AD tenant named contoso.onmicrosoft.com
- \* An Amazon Web Services (AWS) implementation named ContosoAWS1 that contains AWS EC2 instances used to host test workloads for the applications of Fabrikam. Developers at Contoso will connect to the resources of Fabrikam to test or update applications. The developers will be added to a security group named Contoso Developers in fabrikam.onmicrosoft.com that will be assigned to roles in Sub1.

The ContosoDevelopers group is assigned the db.owner role for the ClaimsDB database.

### Compliance Event

Fabrikam deploys the following compliance environment:

- \* Defender for Cloud is configured to assess all the resources in Sub1 for compliance to the HIPAA HITRUST standard.
- \* Currently, resources that are noncompliant with the HIPAA HITRUST standard are remediated manually.
- \* Qualys is used as the standard vulnerability assessment tool for servers.

### Problem Statements

The secure score in Defender for Cloud shows that all the virtual machines generate the following recommendation-. Machines should have a vulnerability assessment solution.

All the virtual machines must be compliant in Defender for Cloud.

### ClaimsApp Deployment

Fabrikam plans to implement an internet-accessible application named ClaimsApp that will have the following specification

- \* ClaimsApp will be deployed to Azure App Service instances that connect to Vnet1 and Vnet2.
- \* Users will connect to ClaimsApp by using a URL of https://claims.fabrikam.com.
- \* ClaimsApp will access data in ClaimsDB.
- \* ClaimsDB must be accessible only from Azure virtual networks.
- \* The app services permission for ClaimsApp must be assigned to ClaimsDB.

### Application Development Requirements

Fabrikam identifies the following requirements for application development:

- \* Azure DevTest labs will be used by developers for testing.
- \* All the application code must be stored in GitHub Enterprise.

\* Azure Pipelines will be used to manage application deployments.

\* All application code changes must be scanned for security vulnerabilities, including application code or configuration files that contain secrets in clear text. Scanning must be done at the time the code is pushed to a repository.

#### Security Requirement

Fabrikam identifies the following security requirements:

\* Internet-accessible applications must prevent connections that originate in North Korea.

\* Only members of a group named InfraSec must be allowed to configure network security groups (NSGs) and instances of Azure Firewall, VJM, and Front Door in Sub1.

\* Administrators must connect to a secure host to perform any remote administration of the virtual machines.

The secure host must be provisioned from a custom operating system image.

#### AWS Requirements

Fabrikam identifies the following security requirements for the data hosted in ContosoAWSV.

\* Notify security administrators at Fabrikam if any AWS EC2 instances are noncompliant with secure score recommendations.

\* Ensure that the security administrators can query AWS service logs directly from the Azure environment.

#### Contoso Developer Requirements

Fabrikam identifies the following requirements for the Contoso developers:

\* Every month, the membership of the ContosoDevelopers group must be verified.

\* The Contoso developers must use their existing contoso.onmicrosoft.com credentials to access the resources in Sub1.

\* The Comoro developers must be prevented from viewing the data in a column named MedicalHistory in the ClaimDetails table.

#### Compliance Requirement

Fabrikam wants to automatically remediate the virtual machines in Sub1 to be compliant with the HIPAA HITRUST standard. The virtual machines in TestRG must be excluded from the compliance assessment.

### NEW QUESTION # 17

You have a Microsoft 365 E5 subscription.

You are designing a solution to protect confidential data in Microsoft SharePoint Online sites that contain more than one million documents.

You need to recommend a solution to prevent Personally Identifiable Information (PII) from being shared.

Which two components should you include in the recommendation? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. retention label policies
- B. eDiscovery cases
- C. data loss prevention (DLP) policies
- D. sensitivity label policies

**Answer: B,C**

### NEW QUESTION # 18

Your company has a Microsoft 365 E5 subscription. The company wants to identify and classify data in Microsoft Teams, SharePoint Online, and Exchange Online. You need to recommend a solution to identify documents that contain sensitive information. What should you include in the recommendation?

- A. data loss prevention (DLP)
- B. Information Governance
- C. eDiscovery
- D. data classification content explorer

**Answer: A**

#### Explanation:

Topic 1, Litware, inc.

Existing Environment

Litware has an Azure Active Directory (Azure AD) tenant that syncs with an Active Directory Domain Services (AD DS) forest named Utvare.com and is linked to 20 Azure subscriptions. Azure AD Connect is used to implement pass-through authentication. Password hash synchronization is disabled, and password writeback is enabled. All Litware users have Microsoft 365 E5 licenses. The environment also includes several AD DS forests, Azure AD tenants, and hundreds of Azure subscriptions that belong to the subsidiaries of Litware.

Planned Changes

Litware plans to implement the following changes:

- \* Create a management group hierarchy for each Azure AD tenant.
- \* Design a landing zone strategy to refactor the existing Azure environment of Litware and deploy all future Azure workloads.
- \* Implement Azure AD Application Proxy to provide secure access to internal applications that are currently accessed by using the VPN.

#### Business Requirements

Litware identifies the following business requirements:

- \* Minimize any additional on-premises infrastructure.
- \* Minimize the operational costs associated with administrative overhead.

#### Hybrid Requirements

Litware identifies the following hybrid cloud requirements:

- \* Enable the management of on-premises resources from Azure, including the following:
  - \* Use Azure Policy for enforcement and compliance evaluation.
  - \* Provide change tracking and asset inventory.
  - \* Implement patch management.
  - \* Provide centralized, cross-tenant subscription management without the overhead of maintaining guest accounts.

#### Microsoft Sentinel Requirements

Litware plans to leverage the security information and event management (SIEM) and security orchestration automated response (SOAR) capabilities of Microsoft Sentinel. The company wants to centralize Security Operations Center (SOC) by using Microsoft Sentinel.

#### Identity Requirements

Litware identifies the following identity requirements:

- \* Detect brute force attacks that directly target AD DS user accounts.
- \* Implement leaked credential detection in the Azure AD tenant of Litware.
- \* Prevent AD DS user accounts from being locked out by brute force attacks that target Azure AD user accounts.
- \* Implement delegated management of users and groups in the Azure AD tenant of Litware, including support for:
  - \* The management of group properties, membership, and licensing
  - \* The management of user properties, passwords, and licensing
  - \* The delegation of user management based on business units.

#### Regulatory Compliance Requirements

Litware identifies the following regulatory compliance requirements:

- \* Insure data residency compliance when collecting logs, telemetry, and data owned by each United States- and France-based subsidiary.
- \* Leverage built-in Azure Policy definitions to evaluate regulatory compliance across the entire managed environment.
- \* Use the principle of least privilege.

#### Azure Landing Zone Requirements

Litware identifies the following landing zone requirements:

- \* Route all internet-bound traffic from landing zones through Azure Firewall in a dedicated Azure subscription.
- \* Provide a secure score scoped to the landing zone.
- \* Ensure that the Azure virtual machines in each landing zone communicate with Azure App Service web apps in the same zone over the Microsoft backbone network, rather than over public endpoints.
- \* Minimize the possibility of data exfiltration.
- \* Maximize network bandwidth.

The landing zone architecture will include the dedicated subscription, which will serve as the hub for internet and hybrid connectivity.

Each landing zone will have the following characteristics:

- \* Be created in a dedicated subscription.
- \* Use a DNS namespace of litware.com.

#### Application Security Requirements

Litware identifies the following application security requirements:

- \* Identify internal applications that will support single sign-on (SSO) by using Azure AD Application Proxy.
- \* Monitor and control access to Microsoft SharePoint Online and Exchange Online data in real time.
