WGU: Managing Cloud Security Questions with Answers 2025

Infrastructure as a service (iaas) - correct answers- allows the customer to install all software, including operating systems (oss) on hardware housed and connected by the cloud vendor.

Platform as a service (paas) - correct answers- contains everything included in iaas, with the addition of oss. this model is especially useful for software development operations (devops).

Software as a service (saas) - correct answers- includes everything listed in the previous infrastructure as a service (iaas) and platform as a service (paas) models, with the addition of software programs.

Encryption - correct answers- offers a degree of assurance that nobody without authorization will be able to access your data in a meaningful way.

Cloud service provider (CSP) - correct answers- provides administrative assistance for the customer and the customer's data and processing needs. examples include amazon web services, rackspace, and microsoft's azure.

Virtualization - correct answers- a process of creating a virtual version of something, including virtual computer hardware platforms, operating systems, storage devices, and computer network resources.

Vendor lock-in - correct answers- occurs in a situation where a customer may be unable to leave, migrate, or transfer to an alternate provider due to technical or non-technical constraints.

Cloud provider - correct answers- a service provider that offers customer storage or software solutions available via a public network, usually the internet.

Cloud portability - correct answers- the ability to move applications and associated data between one cloud provider and another, or between legacy and cloud environments.

Cloud access security broker (CASB) - correct answers- a third-party entity offering independent identity and access management (IAM) services to csp's and cloud customers, often as an intermediary.

We use what to determine the critical paths, processes, and assets of an organization? - correct answers- BIA (the business impact analysis is designed to ascertain the value of the organization's assets, and learn the critical paths and processes.)

If a cloud customer wants a bare-bones environment in which to replicate their own enterprise for bc/dr purposes, which cloud service model would probably be best? - correct answers- iaas - iaas offers what is basically a hot/warm dr site, with hardware, connectivity, and utilities, allowing the customer to build out any kind of software configuration (including choosing oss).

Students often feel helpless when purchasing test materials, because most of the test materials cannot be read in advance, students often buy some products that sell well but are actually not suitable for them. But if you choose Managing-Cloud-Security practice test, you will certainly not encounter similar problems. All the materials in Managing-Cloud-Security Exam Torrent can be learned online or offline. You can use your mobile phone, computer or print it out for review. With Managing-Cloud-Security practice test, if you are an office worker, you can study on commute to work, while waiting for customers, and for short breaks after work.

In order to solve customers' problem in the shortest time, our WGU Managing Cloud Security (JY02) guide torrent provides the twenty four hours online service for all people. Maybe you have some questions about our Managing-Cloud-Security test torrent when you use our products; it is your right to ask us in anytime and anywhere. You just need to send us an email, our online workers are willing to reply you an email to solve your problem in the shortest time. During the process of using our Managing-Cloud-Security study torrent, we can promise you will have the right to enjoy the twenty four hours online service provided by our online workers. At the same time, we warmly welcome that you tell us your suggestion about our Managing-Cloud-Security study torrent, because we believe it will be very useful for us to utilize our Managing-Cloud-Security test torrent.

Realistic WGU Managing-Cloud-Security Question Explanations Are Leading Materials & Trusted Managing-Cloud-Security: WGU Managing Cloud Security (JY02)

Do you want to find a fast way to step towards your dreams? We can help you by providing the latest and best useful Managing-Cloud-Security pdf torrent to guarantee your success in WGU Managing-Cloud-Security test certification. We keep our Managing-Cloud-Security vce torrent the latest by checking the newest information about the updated version every day. Add the latest topics into the Managing-Cloud-Security Dumps, and remove the useless questions, so that your time will be saved and study efficiency will be improved.

WGU Managing Cloud Security (JY02) Sample Questions (Q117-Q122):

NEW QUESTION # 117

Which component allows customers to transfer data into and out of a cloud computing vendor's environment?

- A. Virtual display
- **B. Network**
- C. Load balancer
- D. Firewall

Answer: B

Explanation:

The network is the component that enables customers to transfer data into and out of a cloud environment. It provides the connectivity through which data is uploaded, downloaded, and exchanged between customer systems and cloud infrastructure. Firewalls protect the network by filtering traffic, load balancers distribute requests across resources, and virtual displays present interfaces, but none directly facilitate the transfer of data.

In cloud models, secure networking is critical. Protocols like TLS encrypt traffic, while VPNs and private links provide additional isolation. Reliable networking ensures availability, while strong controls safeguard confidentiality and integrity. Customers must ensure that the cloud provider offers secure, high-performance network services to support business needs.

NEW QUESTION # 118

An organization is implementing a new hybrid cloud deployment. Before granting access to any of the resources, the security team wants to ensure that all employees are checked against a database to see if they are allowed to access the requested resource. Which type of security control is the organization leveraging for its employees?

- A. Antispyware program
- **B. Authorization**
- C. Authentication
- D. Web application firewall (WAF)

Answer: B

Explanation:

The described control is authorization, which occurs after authentication. Authorization determines what resources a user can access based on their role, attributes, or policies stored in an access control database.

Authentication confirms identity, but authorization validates permissions. WAFs protect applications from malicious traffic, and antispyware tools detect malware. Neither applies to access decisions.

By checking users against a database of permissions, the organization enforces the principle of least privilege, ensuring employees only access the resources necessary for their role. This strengthens data protection, reduces insider threats, and aligns with compliance requirements for access governance.

NEW QUESTION # 119

Which concept focuses on operating highly available workloads in the cloud?

- **A. Reliability**
- B. Operational excellence
- C. Resource hierarchy

- D. Security

Answer: A

Explanation:

Reliability in cloud design ensures workloads can recover quickly from disruptions and continue operating as expected. This concept focuses on high availability, fault tolerance, and disaster recovery. Reliability requires implementing redundancy, backup strategies, and robust monitoring.

Security ensures data protection, operational excellence covers continuous improvement, and resource hierarchy refers to organizational structures, but none focus specifically on availability and resilience.

By prioritizing reliability, organizations design cloud architectures capable of withstanding failures at multiple layers—compute, storage, networking, and even regions. This design principle ensures customer trust and compliance with service-level agreements.

NEW QUESTION # 120

Which cloud computing role can subscribe to a software as a service (SaaS) application?

- A. Cloud application
- B. Cloud service provider
- C. Cloud service customer
- D. Cloud computing

Answer: C

Explanation:

A cloud service customer is the role that subscribes to a software as a service (SaaS) application. Managing Cloud principles define the cloud service customer as the individual or organization that consumes cloud services provided by a cloud service provider.

In a SaaS model, the customer accesses applications through a subscription-based arrangement, typically via a web interface. The customer does not manage the underlying infrastructure or platform but is responsible for configuring user access and ensuring proper use of the service.

The cloud service provider delivers and manages the application, while "cloud computing" and "cloud application" are not roles. Therefore, the cloud service customer is the correct role.

NEW QUESTION # 121

What is a core goal of operating system (OS) baseline compliance and monitoring?

- A. Isolate customer traffic traveling over multi-tenant networks
- B. Meet the required service levels as specified in the SLA
- C. Separate customer data in multi-tenant hosting environments
- D. Ensure virtual images satisfy baseline configuration requirements

Answer: D

Explanation:

A core goal of OS baseline compliance and monitoring is to ensure that virtual images and operating systems adhere to approved baseline configuration requirements. Managing Cloud documentation explains that baseline configurations define secure settings for operating systems, including disabled services, patch levels, access controls, and logging configurations.

Compliance monitoring continuously verifies that systems remain aligned with these baselines over time. This helps detect unauthorized changes, configuration drift, or misconfigurations that could introduce vulnerabilities. Ensuring that virtual images meet baseline standards before deployment also reduces risk across scaled cloud environments.

The other options relate to availability, network isolation, or data separation, which are addressed by different controls. Therefore, ensuring baseline configuration compliance is the primary goal of OS baseline monitoring.

NEW QUESTION # 122

.....

Time is life, time is speed, and time is power. You have to spend less time reaching your goals before you can walk ahead and seize more opportunities. Now, if you use our Managing-Cloud-Security preparation materials, you only need to learn twenty to thirty hours to go to the exam. And this data is provided and tested by our worthy customers. For they have passed the exam with the
