

100% Pass Quiz Professional-Cloud-Security-Engineer - Google Cloud Certified - Professional Cloud Security Engineer Exam–Professional Reliable Test Forum

P.S. Free & New Professional-Cloud-Security-Engineer dumps are available on Google Drive shared by Itcerttest: https://drive.google.com/open?id=13Pa3ORNgv6ZoNILZl_4JaMfBIUXXz-h1

Where there is a will, there is a way. As long as you never give up yourself, you are bound to become successful. We hope that our Professional-Cloud-Security-Engineer exam materials can light your life. People always make excuses for their laziness. It is time to refresh again. You will witness your positive changes after completing learning our Professional-Cloud-Security-Engineer Study Guide. Not only that you can learn more useful and latest professional knowledge, but also you can get the Professional-Cloud-Security-Engineer certification to have a better career.

Preparing for the Google Professional-Cloud-Security-Engineer exam requires dedicated study time, practice tests, and hands-on experience working with Google Cloud Platform. Candidates can benefit from a comprehensive understanding of Google Cloud Platform, as well as familiarity with other cloud platforms and security frameworks. Google offers training resources and certification preparation guides to help candidates prepare for the exam, including on-demand courses, instructor-led training, and certification preparation workshops.

Achieving the Google Professional-Cloud-Security-Engineer Certification demonstrates that an IT professional has the skills and knowledge to secure Google Cloud infrastructure and services effectively. It serves as a validation of their expertise in cloud security and can enhance career opportunities, increase earning potential, and demonstrate a commitment to professional development. Overall, the Google Professional-Cloud-Security-Engineer certification is an excellent way for IT professionals to demonstrate their expertise in cloud security and gain a competitive edge in the job market.

Pdf Professional-Cloud-Security-Engineer Exam Dump - Exam Professional-Cloud-Security-Engineer Forum

The main key to passing the Professional-Cloud-Security-Engineer exam is to use your time affectionately and grasp every topic so you can attempt the maximum number of questions in the actual Professional-Cloud-Security-Engineer Exam. By studying the questions mentioned in the prep material, the candidates have control over the exam anxiety in no time.

Google Cloud Certified - Professional Cloud Security Engineer Exam Sample Questions (Q301-Q306):

NEW QUESTION # 301

You are troubleshooting access denied errors between Compute Engine instances connected to a Shared VPC and BigQuery datasets. The datasets reside in a project protected by a VPC Service Controls perimeter. What should you do?

- A. Create a service perimeter between the service project where the Compute Engine instances reside and the host project that contains the Shared VPC.
- B. Add the service project where the Compute Engine instances reside to the service perimeter.
- C. Add the host project containing the Shared VPC to the service perimeter.
- D. Create a perimeter bridge between the service project where the Compute Engine instances reside and the perimeter that contains the protected BigQuery datasets.

Answer: C

NEW QUESTION # 302

Your company requires the security and network engineering teams to identify all network anomalies within and across VPCs, internal traffic from VMs to VMs, traffic between end locations on the internet and VMs, and traffic between VMs to Google Cloud services in production. Which method should you use?

- A. Configure packet mirroring policies.
- B. Define an organization policy constraint.
- C. Enable VPC Flow Logs on the subnet.
- D. Monitor and analyze Cloud Audit Logs.

Answer: A

Explanation:

https://cloud.google.com/vpc/docs/packet-mirroring#enterprise_security

Security and network engineering teams must ensure that they are catching all anomalies and threats that might indicate security breaches and intrusions. They mirror all traffic so that they can complete a comprehensive inspection of suspicious flows.

NEW QUESTION # 303

You are setting up a CI/CD pipeline to deploy containerized applications to your production clusters on Google Kubernetes Engine (GKE). You need to prevent containers with known vulnerabilities from being deployed. You have the following requirements for your solution:

Must be cloud-native

Must be cost-efficient

Minimize operational overhead

How should you accomplish this? (Choose two.)

- A. Create a Cloud Build pipeline that will monitor changes to your container templates in a Cloud Source Repositories repository. Add a step to analyze Container Analysis results before allowing the build to continue.
- B. In your CI/CD pipeline, add an attestation on your container image when no vulnerabilities have been found. Use a Binary Authorization policy to block deployments of containers with no attestation in your cluster.
- C. Use a Cloud Function triggered by log events in Google Cloud's operations suite to automatically scan your container

images in Container Registry.

- D. Deploy Jenkins on GKE and configure a CI/CD pipeline to deploy your containers to Container Registry. Add a step to validate your container images before deploying your container to the cluster.
- E. Use a cron job on a Compute Engine instance to scan your existing repositories for known vulnerabilities and raise an alert if a non-compliant container image is found.

Answer: B,E

NEW QUESTION # 304

A customer wants to run a batch processing system on VMs and store the output files in a Cloud Storage bucket. The networking and security teams have decided that no VMs may reach the public internet.

How should this be accomplished?

- A. Create a firewall rule to block internet traffic from the VM.
- B. Provision a NAT Gateway to access the Cloud Storage API endpoint.
- C. Mount a Cloud Storage bucket as a local filesystem on every VM.
- D. Enable Private Google Access on the VPC.

Answer: D

Explanation:

Since Network and Security Team has decided to disable internet access, the only option left is the Google Private Access option.

NEW QUESTION # 305

You want to limit the images that can be used as the source for boot disks. These images will be stored in a dedicated project.

What should you do?

- A. In Resource Manager, edit the project permissions for the trusted project. Add the organization as member with the role: Compute Image User.
- B. Use the Organization Policy Service to create a compute.trustedimageProjects constraint on the organization level. List the trusted projects as the exceptions in a deny operation.
- C. Use the Organization Policy Service to create a compute.trustedimageProjects constraint on the organization level. List the trusted project as the whitelist in an allow operation.
- D. In Resource Manager, edit the organization permissions. Add the project ID as member with the role: Compute Image User.

Answer: B

Explanation:

Explanation/Reference: <https://cloud.google.com/compute/docs/images/restricting-image-access>

NEW QUESTION # 306

.....

If you have interests with our Professional-Cloud-Security-Engineer practice materials, we prefer to tell that we have contacted with many former buyers of our Professional-Cloud-Security-Engineer exam questions and they all talked about the importance of effective Professional-Cloud-Security-Engineer practice material playing a crucial role in your preparation process. Our Professional-Cloud-Security-Engineer practice materials keep exam candidates motivated and efficient with useful content based wholly on the real Professional-Cloud-Security-Engineer guide materials. There are totally three versions of Professional-Cloud-Security-Engineer practice materials which are the most suitable versions for you: pdf, software and app versions.
