問題 #37
Match the correct scanning mode for each given operation.
(Select your answer from the pull-down list. Answers may be used more than once or not at all.)

答案：

解題說明：
Explanation:
* Create SNS Topic Triggers: No data security scan
* Select an S3 bucket: Forward Scan only
* Select an S3 bucket with existing files: Forward or Backward Scan
* Link an S3 logging to CloudTrail: Backward Scan only
The scanning mode for Data Security in AWS typically depends on the configuration and the desired outcomes for monitoring and protecting data within S3 buckets.
Creating SNS Topic Triggers is a configuration step that does not directly involve scanning. It is part of setting up notifications for events in S3 buckets, but on its own, it does not initiate a data security scan.

Selecting an S3 bucket without specifying existing files typically implies that you intend to scan new objects as they are added to the bucket, which is known as a Forward Scan. This mode is proactive and scans files upon their arrival in the bucket.
When you select an S3 bucket with existing files, you can perform either Forward Scanning for new files or Backward Scanning to scan all existing files in the bucket. This option provides the most comprehensive scanning coverage for both new and existing data.
Linking an S3 logging to CloudTrail is usually a step taken to monitor access and changes to S3 resources. In the context of scanning, linking S3 to CloudTrail does not initiate a scan, but the CloudTrail logs can be used to trigger a Backward Scan if configured to do so, which scans historical files in the bucket based on CloudTrail events.

問題 #38
Which IAM RQL query would correctly generate an output to view users who enabled console access with both access keys and passwords?

- A. config where api.name = 'aws-iam-get-credential-report' AND json.rule= access_key_1_active is true or access_key_2_active is true and password_enabled equals "true"
- B. config from cloud.resource where api.name = 'aws-iam-get-credential-report' AND json.rule = access_key_1_active is false or access_key_2_active is true and password_enabled equals "*"
- C. config from cloud.resource where api.name = 'aws-iam-get-credential-report' AND json.rule = access_key_1_active is true or access_key_2_active is true and password_enabled equals "true"
- D. config from network where api.name = 'aws-iam-get-credential-report' AND json.rule = cert_1_active is true or cert_2_active is true and password_enabled equals "true"

答案：C

解題說明:
View users who enabled console access with both access keys and passwords: config from cloud.resource where api.name = 'aws-iam-get-credential-report' AND json.rule = access_key_1_active is true or access_key_2_active is true and password_enabled is true https://docs.paloaltonetworks.com/prisma/prisma- cloud/prisma-cloud-rql-reference/rql-reference/config-query/config-query-examples

問題 #39
The development team is building pods to host a web front end, and they want to protect these pods with an application firewall.
Which type of policy should be created to protect this pod from Layer7 attacks?

- A. The development team should create a WAAS rule targeted at the image name of the pods.
- B. The development team should create a WAAS rule for the host where these pods will be running.
- C. The development team should create a runtime policy with networking protections.
- D. The development team should create a WAAS rule targeted at all resources on the host.

答案：A

解題說明:
To protect the pods hosting a web front end from Layer 7 attacks, the development team should create a Web Application and API Security (WAAS) rule targeted at the image name of the pods. This approach allows the policy to specifically protect the applications running within the pods against sophisticated attacks that target the application layer.

問題 #40
An organization wants to be notified immediately to any "High Severity" alerts for the account group "Clinical Trials" via Slack.
Which option shows the steps the organization can use to achieve this goal?

- A. 1. Under the "Select Policies" tab, filter on severity and select "High"2.Under the Set Alert Notification tab, choose Slack and populate the channel3.Set Frequency to "As it Happens"4.Configure Slack Integration5.Create an Alert rule
- B. 1. Create an alert rule and select "Clinical Trials" as the account group2.Under the "Select Policies" tab, filter on severity and select "High"3.Under the Set Alert Notification tab, choose Slack and populate the channel4.Set Frequency to "As it Happens"5.Set up the Slack Integration to complete the configuration
- C. 1. Configure Slack Integration2.Create an alert rule3.Under the "Select Policies" tab, filter on severity and select

"High"4.Under the Set Alert Notification tab, choose Slack and populate the channel5.Set Frequency to "As it Happens"

- D. 1. Configure Slack Integration2.Create an alert rule and select "Clinical Trials" as the account group3. Under the "Select Policies" tab, filter on severity and select "High"4.Under the Set Alert Notification tab, choose Slack and populate the channel5.Set Frequency to "As it Happens"

答案：D

解題說明：
To achieve immediate notification for "High Severity" alerts for a specific account group via Slack, the steps outlined in option A provide a comprehensive and effective approach. Firstly, configuring the Slack Integration establishes the necessary communication channel between Prisma Cloud and the Slack workspace.
Creating an alert rule with the specified account group and severity filters ensures that only relevant alerts trigger notifications. Selecting Slack as the notification channel and setting the frequency to "As it Happens" ensures real-time alerting for critical issues. This method leverages Prisma Cloud's alerting capabilities and Slack's real-time messaging platform to promptly notify the security team, enabling swift action to mitigate risks. This approach is in line with Prisma Cloud's flexible and configurable alerting system, designed to integrate with various external platforms for efficient incident response.

問題 #41
A Prisma Cloud administrator is onboarding a single GCP project to Prisma Cloud. Which two steps can be performed by the Terraform script? (Choose two.)

- A. create the Prisma Cloud role.
- B. publish the flow log to a storage bucket.
- C. enable the required APIs for Prisma Cloud.
- D. enable flow logs for Prisma Cloud.

答案：A,C

解題說明：
When a Prisma Cloud administrator is onboarding a single GCP project to Prisma Cloud, the Terraform script can perform several steps to facilitate this integration. The steps include B. create the Prisma Cloud role, which is essential for defining the permissions and capabilities that Prisma Cloud will have within the GCP environment, and C. enable the required APIs for Prisma Cloud, ensuring that Prisma Cloud can access the necessary GCP services and features for comprehensive cloud security management.
