New Salesforce Salesforce-Data-Cloud Test Duration | Review Salesforce-Data-Cloud Guide

Our Salesforce-Data-Cloud guide tests can solve these problems perfectly, because our study materials only need little hours can be grasped. Once you use our Salesforce-Data-Cloud latest dumps, you will save a lot of time. High effectiveness is our great advantage. After twenty to thirty hours' practice, you are ready to take the real Salesforce-Data-Cloud Exam Torrent. The results will never let you down. You just need to wait for obtaining the certificate.

Salesforce Data Cloud Accredited Professional Exam Sample Questions (Q151-Q156):

NEW QUESTION # 151

When trying to disconnect a data source an error will be generated if it has which two dependencies associated with it?
Choose 2 answers

- A. Activation
- B. Segment
- C. Activation target
- D. Data stream

Answer: B,D

Explanation:

When disconnecting a data source in Salesforce Data Cloud, the system checks for active dependencies that rely on the data source. Based on Salesforce's official documentation (Disconnect a Data Source), the error occurs if the data source has data streams or segments associated with it. Here's the breakdown:

Key Dependencies That Block Disconnection

Data Stream (Option B):

Why It Matters: A data stream is the pipeline that ingests data from the source into Data Cloud. If an active data stream is connected to the data source, disconnecting the source will fail because the stream depends on it for ongoing data ingestion.

Resolution: Delete or pause the data stream first.

Documentation Reference: "Before disconnecting a data source, delete all data streams that are associated with it." (Salesforce Help Article)

Segment (Option C):

Why It Matters: Segments built using data from the source will reference that data source. Disconnecting the source would orphan these segments, so the system blocks the action.

Resolution: Delete or modify segments that depend on the data source.

Documentation Reference: "If there are segments that use data from the data source, you must delete those segments before disconnecting the data source." (Salesforce Help Article)

Why Other Options Are Incorrect Activation (A): Activations send segments to external systems (e.g., Marketing Cloud) but do not directly depend on the data source itself. The dependency chain is Segment # Activation, not Data Source # Activation.

Activation Target (D): Activation targets (e.g., Marketing Cloud) are destinations and do not tie directly to the data source.

Steps to Disconnect a Data Source

Delete Dependent Segments: Navigate to Data Cloud > Segments and remove any segments built using the data source.

Delete or Pause Data Streams: Go to Data Cloud > Data Streams and delete streams linked to the data source.

Disconnect the Data Source: Once dependencies are resolved, disconnect the source via Data Cloud > Data Sources.

NEW QUESTION # 152

The leadership team at Cumulus Financial has declared that customers who have deposited more than \$250,000 in the last 5 years and who are not using advisory services, will be the central focus for all new campaigns in the next year. Which two features support this need?

- A. Calculated Insight
- B. Segment
- C. Report
- D. Dashboard

Answer: A,B

Explanation:

These two features support the need to calculate each customer's lifetime value (LTV) and create breakdowns of the revenue sourced by different channels. Calculated Insight allows you to create complex calculations based on stored data, such as LTV.

Segment allows you to create audiences based on different criteria, such as revenue source. Reference:

https://help.salesforce.com/s/articleView?id=sfc360_a_calculated_insights.htm&type=5 https://help.salesforce.com/s/articleView?id=sfc360_a_segmentation.htm&type=5

NEW QUESTION # 153

An organization wants to enable users with the ability to identify and select text attributes from a picklist of options.

Which Data Cloud feature should help with this use case?

- A. Data harmonization
- B. Value suggestion
- C. Transformation formulas
- D. Global picklists

Answer: B

Explanation:

Value suggestion is a Data Cloud feature that allows users to see and select the possible values for a text field when creating segment filters. Value suggestion can be enabled or disabled for each data model object (DMO) field in the DMO record home. Value suggestion can help users to identify and select text attributes from a picklist of options, without having to type or remember the exact values. Value suggestion can also reduce errors and improve data quality by ensuring consistent and valid values for the segment filters. References: Use Value Suggestions in Segmentation, Considerations for Selecting Related Attributes

NEW QUESTION # 154

What is the maximum limit of the number of records for Full Refresh Extract Method?

- A. No hard limit
- B. 40 million
- C. 50 million
- D. 10 million

Answer: D

Explanation:

The maximum limit of the number of records for Full Refresh Extract Method is 10 million. Full Refresh Extract Method is an option for extracting data from Marketing Cloud to Data Cloud. It extracts all records from a data extension regardless of when they were created or modified. If the number of records exceeds 10 million, an error occurs and no records are extracted. Reference: Extract Methods

NEW QUESTION # 155

Which data sources are available from Marketing Cloud as a starter bundle?

- A. Email, MobileConnect and MobilePush
- B. Email, Mobile Connect, and Einstein Engagement Scoring
- C. Email, Cloud Pages, Einstein Web & Email Recommendations
- D. Email, MobileConnect, MobilePush and GroupConnect

Answer: A

Explanation:

Explanation

These data sources are available from Marketing Cloud as a starter bundle. They provide basic contact data, such as email address, mobile number, and device ID, as well as engagement data, such as email opens, clicks, bounces, unsubscribes, SMS sends, deliveries, opt-outs, and push sends, opens, and opt-outs.
