Answer: B

Explanation:

Comprehensive and Detailed Explanation (HCIA-Cloud Computing aligned):

Huawei FusionCompute leverages hardware-assisted virtualization technologies such as Intel VT-x, EPT, and AMD-V, which significantly reduce the overhead associated with CPU and memory virtualization.

Memory virtualization traditionally involved complex software-based address translation, which introduced performance overhead. With hardware-assisted features such as Extended Page Tables (EPT), memory mapping is handled directly by the CPU, improving efficiency and performance.
