C_SEC_2405퍼펙트 인증덤프자료 - C_SEC_2405최고덤프문제

Fast2test의SAP인증 C_SEC_2405덤프는 고객님의 IT인증자격증을 취득하는 소원을들어줍니다. IT업계에 금방 종사한 분은 자격증을 많이 취득하여 자신만의 가치를 업그레이드할수 있습니다. Fast2test의SAP인증 C_SEC_2405덤프는 실제 시험문제에 대비하여 연구제작된 퍼펙트한 시험전 공부자료로서 시험이 더는 어렵지 않게 느끼도록 편하게 도와드립니다.

SAP C_SEC_2405 시험요강:

주제	소개
주제 1	• User Administration: This section of the exam measures the skills of SAP Administrators and covers user administration tasks within SAP systems. It includes managing user accounts, roles, and profiles efficiently. A critical skill evaluated is maintaining accurate user records to support security and compliance efforts.
주제 2	• Authorization and Role Maintenance: This section of the exam measures the skills of SAP administrators and covers the management of user authorizations and roles within SAP systems. It emphasizes the processes involved in defining, maintaining, and approving roles to ensure secure access. A key skill assessed is managing role authorizations effectively to mitigate access risks.

주제 3	• SAP Fiori Authorizations and SAP S • 4HANA: This section of the exam measures the skills of SAP Developers and covers authorization management specific to SAP Fiori applications within SAP S • 4HANA. It emphasizes configuring authorizations for Fiori apps to ensure appropriate access levels. A key skill assessed is understanding Fiori authorization concepts to enhance user experience.
주제 4	• Public Cloud User and Role Management: This section of the exam measures the skills of SAP IT cloud Professionals and covers managing users and roles in public cloud environments for SAP applications.
주제 5	• Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.

최신 SAP Certified Associate C_SEC_2405 무료샘플문제 (Q32-Q37):

질문 # 32

When performing a comparison from the imparting role, what happens to the organizational level field values in the derived role?

Note: There are 2 correct answers to this question.

- A. Data for organizational levels is always transferred when authorization data for the derived role is modified.
- B. Data for organizational levels that have already been maintained in the derived role is NOT overwritten.
- C. Data for organizational levels is transferred only when authorization data for the derived role is first modified.
- D. Data for organizational levels that have already been maintained in the derived role is overwritten.

정답: B,C

질문 # 33

Which archiving objects are relevant for archiving change documents for user master records? Note: There are 2 correct answers to this question.

- A. US_USER
- B. US_AUTH
- C. US_PROF
- D. US_PASS

정답: A,D

설명:

In SAP systems, archiving change documents for user master records involves specific archiving objects to manage historical data efficiently. The archiving object US_PASS is used to archive changes related to user passwords, such as password resets or updates, which are critical for tracking user account modifications.

Similarly, US_USER is used to archive changes to user master records, including details like user IDs, names, and group assignments, ensuring a comprehensive record of user profile modifications. These objects allow administrators to store historical data securely while freeing up system resources. In contrast, US_AUTH is related to authorization assignments, not user master record changes, and US_PROF deals with profile assignments, which are separate from user master data. By using US_PASS and US_USER, SAP ensures that changes to sensitive user information are preserved for audit and compliance purposes, supporting security governance in large-scale SAP environments. This archiving process helps maintain system performance while retaining essential historical data for regulatory and forensic analysis.

질문 # 34

Which functions in SAP Access Control can be used to approve or reject a user's continued access to specific security roles? Note: There are 2 correct answers to this question.

- A. SOD Review
- B. Role Certification

- C. Role Reaffirm
- D. User Access Review

정답: C,D

설명:

In SAP Access Control, User Access Review and Role Reaffirm are functions used to approve or reject a user's continued access to specific security roles. User Access Review allows managers or administrators to periodically review and certify user role assignments, ensuring that access remains appropriate for current job functions. This process involves approving or rejecting access based on business needs, supporting compliance with security policies. Role Reaffirm, similarly, requires periodic certification of role assignments, enabling administrators to confirm or revoke user access to specific roles to prevent unauthorized permissions. SOD (Segregation of Duties) Review focuses on identifying conflicts in role assignments, not approving user access, and Role Certification is not a standard term in SAP Access Control, though it may be confused with Role Reaffirm. These functions ensure ongoing governance of access rights, reducing risks and maintaining compliance in SAP systems by ensuring only authorized users retain access to critical roles.

질문 # 35

In SAP S/4HANA Cloud Public Edition, what can you do with the Display Authorization Trace? Note: There are 3 correct answers to this question.

- A. Adjust role restrictions to further limit access when performing forensic analysis
- B. Display business roles granting specific access
- C. Adjust role restrictions to account for missing authorizations
- D. Analyze authorization check results for already assigned authorizations
- E. Analyze authorization check results for missing authorizations

정답: B,D,E

설명:

The Display Authorization Trace tool in SAP S/4HANA Cloud Public Edition provides the following functionalities:

- * Display Business Roles (A):
- * Identifies the business roles that grant access to specific objects or transactions.
- * Analyze Missing Authorizations (C):
- * Helps detect authorization gaps by reviewing failed checks, enabling role adjustment.
- * Analyze Assigned Authorizations (E):
- * Verifies successful checks for already assigned authorizations, ensuring roles are functioning as intended.

- * SAP Note on Using Authorization Traces in S/4HANA Cloud

질문 # 36

Which cryptographic libraries are provided by SAP? Note: There are 2 correct answers to this question.

- A. Cryptlib
- B. SecLib
- C. CommonCryptoLib
- D. SAPCRYPTOLIB

정답: B,D

설명:

SAP provides cryptographic libraries to ensure secure communication and data protection in its systems:

- * SecLib (B): This library is part of SAP's security infrastructure and is used for various cryptographic operations.
- * SAPCRYPTOLIB (C): SAPCRYPTOLIB is a critical component for enabling Secure Sockets Layer (SSL) and Transport Layer Security (TLS) encryption in SAP systems.

SAP Security References:

- * SAP Note on Cryptographic Libraries (SAPCRYPTOLIB)
- * SAP Help Portal: Cryptographic Infrastructure
