The VCE4Plus offers three formats for applicants to practice and prepare for the Microsoft Power Platform Developer (PL-400) exam as per their needs. The pdf format of VCE4Plus is portable and can be used on laptops, tablets, and smartphones. Print real Microsoft Power Platform Developer (PL-400) exam questions in our PDF file. The pdf is user-friendly and accessible on any smart device, allowing applicants to study from anywhere at any time.

Microsoft PL-400 exam, also known as the Microsoft Power Platform Developer Exam, is a certification exam designed for individuals who want to prove their skills and knowledge in developing solutions using the Microsoft Power Platform. The Power Platform includes a suite of tools that allows businesses to build custom applications, automate workflows, and analyze data. The PL-400 exam tests the candidate's ability to design, develop, secure, and troubleshoot Power Platform solutions. It covers a range of topics such as creating custom connectors, building model-driven apps, and integrating Power Platform with other systems.

The PL-400 Exam is a challenging test that requires in-depth knowledge of various topics such as Power Apps, Power Automate, and Common Data Service. PL-400 exam is designed to test the developer's ability to create and customize apps, automate processes, and integrate data from different sources. Passing the PL-400 exam requires a thorough understanding of the Power Platform and its capabilities. With its comprehensive coverage of Power Platform development, the PL-400 exam is an essential certification for any developer looking to specialize in this field.

VCE4Plus has been creating the most reliable Microsoft Dumps for many years. And we have helped thousands of Microsoft aspirants in earning the PL-400 certification.

## Microsoft Power Platform Developer Sample Questions (Q209-Q214):

### NEW QUESTION # 209

A company imports data from files.

The following code is created to import the files. (Line numbers are included for reference only.)

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation

Box 1: No

Need to set ContinueOnError=True. ContinueOnError: When true, continue processing the next request in the collection even if a fault has been returned from processing the current request in the collection. When false, do not continue processing the next request.

Box 2: No

ContinueOnError = true must be added before Requests = new OrganizationRequestCollection() on line 3.

Example:

```
// Create an ExecuteMultipleRequest object.
requestWithResults = new ExecuteMultipleRequest()
{
// Assign settings that define execution behavior: continue on error, return responses.
Settings = new ExecuteMultipleSettings()
{
ContinueOnError = false,
ReturnResponses = true
},
// Create an empty organization request collection.
Requests = new OrganizationRequestCollection()
};
```

Box 3: Yes

You can use the ExecuteMultipleRequest message to support higher throughput bulk message passing scenarios in Common Data Service. ExecuteMultipleRequest accepts an input collection of message Requests, executes each of the message requests in the order they appear in the input collection, and optionally returns a collection of Responses containing each message's response or the error that occurred.

Box 4: No

This is just for displaying the result.

### NEW QUESTION # 210

A company uses a custom Power Platform app to create and manage programs. The company has a public website that uses TLS 1.0.

The public website is outside of the corporate domain. The website uses POST requests to save data.

You need to automate the transfer of data to the public website.

What should you use? To answer, select the appropriate options in the answer area.

**Answer:**

Explanation:

### NEW QUESTION # 211

You need to complete a PowerApps component framework (PCF) control.

How should you define the order in the manifest? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

### NEW QUESTION # 212

A JavaScript function on a Contact form alerts users to what they need to type, as shown in the JavaScript Code exhibit. (Click the JavaScript Code tab.)

The Business Phone field has the OnChange event handler defined as shown in the Event Handler exhibit. (Click the Event Handler tab.)

- Users report that there is incorrect wording on the Contact page, as shown in the Contact exhibit. (Click the Contact tab.)
  - You need to determine what happens when a user modifies the business phone of a contact record.
- For each of the following statements, select Yes if the statement is true. Otherwise, select No.
- NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

**NEW QUESTION # 213**

You are developing an app for a sales team to record contact details in their Common Data Service (CDS) database. The app must handle loss of network and save the data to CDS when reconnected. The main screen of the app has a form to collect contact data and a button. The OnSelect property for the button has the following expression:

- For each of the following statements, select Yes if the statement is true. Otherwise, select No.
- NOTE: Each correct selection is worth one point.

**Answer:**
