XK0-006 Exam Pass Guide - Study XK0-006 Dumps

Are you planning to attempt the CompTIA XK0-006 exam of the XK0-006 certification? The first hurdle you face while preparing for the CompTIA Linux+ Certification Exam (XK0-006) exam is not finding the trusted brand of accurate and updated XK0-006 exam questions. If you don't want to face this issue then you are at the trusted spot. Itcerttest is offering actual and Latest XK0-006 Exam Questions that ensure your success in the CompTIA XK0-006 certification exam on your maiden attempt.

CompTIA Linux+ Certification Exam Sample Questions (Q135-Q140):

NEW QUESTION # 135

Which of the following is the term used to describe reviewing processes and file operations on a Linux system?

- A. Tuning
- B. Journaling
- C. Auditing
- D. Logging

Answer: C

Explanation:

Auditing refers to the systematic review and tracking of processes and file operations on a Linux system to ensure accountability, security, and compliance.

NEW QUESTION # 136

A systems administrator wants to review the amount of time the NetworkManager service took to start. Which of the following commands accomplishes this goal?

- A. systemctl daemon-reload
- B. journalctl
- C. resolvectl
- D. systemd-analyze blame

Answer: D

Explanation:

System boot performance analysis is an important system management task included in Linux+ V8. When administrators need to determine how long services take to start during boot, systemd analysis tools are required.

The correct command is `systemd-analyze blame`. This command lists all systemd services and shows how long each one took to initialize during the boot process. It is commonly used to identify slow-starting services that may impact system startup performance, including NetworkManager.

The other options are incorrect. `resolvectl` is used for DNS resolution management and provides no service timing information. `journalctl` can display logs but does not provide a clear, summarized service startup timing report. `systemctl daemon-reload` only reloads systemd unit files and does not perform analysis.

Linux+ V8 documentation explicitly references `systemd-analyze blame` as the correct tool for diagnosing service startup delays. Therefore, the correct answer is D.

NEW QUESTION # 137

An

administrator is investigating the reason a Linux workstation is not resolving the website `http://www.comptia.org`. The administrator executes some commands and receives the following output:

```

$ dig @8.8.8.8 www.comptia.org +short
104.18.16.29

$ nslookup -querytype=A www.comptia.org
...
Name: www.comptia.org
Address: 104.18.16.29

$ nslookup -querytype=AAAA www.comptia.org
...
*** Can't find www.comptia.org: No answer

$ ping -4 www.comptia.org
PING www.comptia.org (104.18.99.101)
From somehost (192.168.1.192) icmp_seq=3 Destination Host Unreachable
...

$ cat /etc/hosts
127.0.0.1 localhost localhost.localdomain
104.18.99.101 www.comptia.org

```

Which of the following is the most likely cause?

- A. The nameserver in `/etc/resolv.conf` needs to be updated to 8.8.8.8
- B. The remote website does not support IPv6, and the workstation requires it.
- C. The firewall needs to be modified to allow outbound HTTP and HTTPS.

- D. The static entry needs to be removed from /etc/hosts.

Answer: D

Explanation:

When troubleshooting name resolution issues in Linux, /etc/hosts entries take precedence over DNS lookups.

The workstation's /etc/hosts file contains the line:

CopyEdit

```
104.18.99.101 www.comptia.org
```

This means any attempt to access www.comptia.org will resolve to 104.18.99.101, regardless of the real DNS response. However, both dig and nslookup show the correct IP as 104.18.16.29. Because the local /etc/hosts entry overrides DNS, and the hardcoded IP is either incorrect or unreachable, all network traffic to www.

comptia.org will fail or not reach the intended destination, resulting in the observed connectivity issue (Destination Host Unreachable).

Other options:

- B). The lack of IPv6 support is irrelevant since the host is using IPv4 and the DNS queries for IPv4 (A record) are successful.
- C). The firewall would block all HTTP/HTTPS connections, but the error shown is a host unreachable, not a port-specific issue.
- D). The nameserver is working; both dig and nslookup queries succeed and return the correct A record.

NEW QUESTION # 138

Users report that after about a week, an application hosted in a system stops responding, requiring the system to be restarted to recover. A systems administrator connects to the system and obtains the following output:

```
total used free shared/buff/cache available
Mem: 15Gi 15Gi 286Ki 5.0Mi 309Mi 263Mi
Swap: 8.0Gi 8.0Gi 80Ki

$ dmesg
[...]
28845.746885] OOM: Killed process 10601 (application) total-vm:23228292kB, anon-rss:15181952kB, file--rss:1408kB, shmem-rss:0kB, UID:1000
pgtables:45076kB oom_score_adj:0
```

Which of the following describes the reason the application stops responding?

- A. The application is configured incorrectly, which depletes memory and swap.
- B. The application is not allowed to allocate memory, which slows down the system.
- C. The application has a memory leak, which consumes all the available memory on the system.
- D. The application has an incorrect disk quota, which fills up the filesystem.

Answer: C

Explanation:

The output shows memory and swap are fully consumed, and the kernel invoked the OOM killer against the application due to excessive resident memory usage, which is consistent with a memory leak gradually exhausting available RAM and swap until the application becomes unresponsive.

NEW QUESTION # 139

A systems administrator is working on an SFTP server configuration. Which of the following commands will best enable the connectivity to that service from the 10.10.0.0/24 network?

- A. sudo ufw allow from 10.10.0.0/24 to any port 22
- B. sudo ufw allow from 10.10.0.0/24
- C. sudo ufw allow 0:22/tcp from 10.10.0.0
- D. sudo ufw allow in on eth0 to any port 22

Answer: A

Explanation:

The command sudo ufw allow from 10.10.0.0/24 to any port 22 explicitly opens TCP port 22 (used by SFTP/SSH) only for hosts in the 10.10.0.0/24 network.

NEW QUESTION # 140

.....

We also update frequently to guarantee that the client can get more learning XK0-006 exam resources and follow the trend of the times. So if you use our XK0-006 study materials you will pass the test with high success probability. And our XK0-006 learning guide is high-effective. If you study with our XK0-006 practice engine for 20 to 30 hours, then you can pass the exam with confidence and achieve the certification as well.
