

Pass Guaranteed 2026 Updated CrowdStrike IDP: CrowdStrike Certified Identity Specialist(CCIS) Exam Latest Test Practice

To make sure that our customers who are from all over the world can understand the content of the IDP exam questions, our professionals try their best to simplify the questions and answers and add some explanations to make them more vivid. So you will find that the unique set of our IDP Practice Guide is the easiest and containing the most rewarding content, you can never found on any other website. And you will love our IDP learning materials as long as you have a try on them!

We are committed to providing our customers with the most up-to-date and accurate CrowdStrike IDP preparation material. That's why we offer free demos and up to 1 year of free CrowdStrike Dumps updates if the CrowdStrike IDP Certification Exam content changes after purchasing our product. With these offers, our customers can be assured that they have the latest and most reliable CrowdStrike Certified Identity Specialist(CCIS) Exam (IDP) preparation material.

IDP Certification Sample Questions & IDP Free Brain Dumps

Our website takes the lead in launching a set of test plan aiming at those office workers to get the IDP exam certification. We have organized a team to research and study question patterns pointing towards various learners. Our company keeps pace with contemporary talent development and makes every learners fit in the needs of the society. Based on advanced technological capabilities, our IDP Study Materials are beneficial for the masses of customers. Our experts have plenty of experience in meeting the requirement of our customers and try to deliver satisfied IDP exam guides to them.

CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • User Assessment: Examines user attributes, differences between users • endpoints • entities, risk baselining, risky account types, elevated privileges, watchlists, and honeytoken accounts.
Topic 2	<ul style="list-style-type: none"> • Threat Hunting and Investigation: Focuses on identity-based detections and incidents, investigation pivots, incident trees, detection evolution, filtering, managing exclusions and exceptions, and risk types.

Topic 3	<ul style="list-style-type: none"> • Risk Management with Policy Rules: Covers creating and managing policy rules and groups, triggers, conditions, enabling • disabling rules, applying changes, and required Falcon roles.
Topic 4	<ul style="list-style-type: none"> • GraphQL API: Covers Identity API documentation, creating API keys, permission levels, pivoting from Threat Hunter to GraphQL, and building queries.
Topic 5	<ul style="list-style-type: none"> • Zero Trust Architecture: Covers NIST SP 800-207 framework, Zero Trust principles, Falcon's implementation, differences from traditional security models, use cases, and Zero Trust Assessment score calculation.
Topic 6	<ul style="list-style-type: none"> • Configuration and Connectors: Addresses domain controller monitoring, subnet management, risk settings, MFA and IDaaS connectors, authentication traffic inspection, and country-based lists.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q13-Q18):

NEW QUESTION # 13

Which section of the Falcon menu is used to investigate the Event Analysis dashboard?

- A. Configure
- **B. Explore**
- C. Threat Hunter
- D. Enforce

Answer: B

Explanation:

In Falcon Identity Protection, the Explore section of the Falcon menu is used to investigate analytical views such as the Event Analysis dashboard. This aligns with the CCIS framework, which defines Explore as the primary area for interactive investigation, analytics, and risk exploration across identity data.

The Event Analysis dashboard is designed to help administrators analyze identity-related authentication events, behavioral patterns, and anomalous activity derived from domain traffic inspection and domain controller telemetry. These analytical capabilities are intentionally placed under Explore because this menu category supports hypothesis-driven investigation rather than enforcement or configuration actions.

By contrast:

- * Enforce is used to apply policy rules and automated controls.
- * Threat Hunter is focused on proactive hunting using queries and detection pivots.
- * Configure is used to manage settings, connectors, policies, and integrations.

The CCIS documentation explicitly associates dashboards such as Risk Analysis and Event Analysis with the Explore menu, emphasizing its role in understanding why risk exists before taking action. Therefore, Option C (Explore) is the correct and verified answer.

NEW QUESTION # 14

When creating an API key, which scope should be selected to retrieve Identity Protection detection and incident information?

- A. Identity Protection Data
- **B. Identity Protection Detections**
- C. Identity Protection Incidents
- D. Identity Protection Assessment

Answer: B

Explanation:

To retrieve identity-based detections and incident-related data using the CrowdStrike APIs, the API key must include the correct permission scope. According to the CCIS curriculum, the Identity Protection Detections scope is required to access identity-based detection and incident information through GraphQL.

This scope allows API queries to retrieve:

- * Identity-based detections
- * Associated incident metadata
- * Detection attributes such as severity, status, and related entities

Incident data in Falcon Identity Protection is derived from detections, making the Detections scope the authoritative permission set for this information. Without this scope, GraphQL queries related to identity detections and incidents will fail authorization. The other scopes are either too narrow or unrelated to detection retrieval. Therefore, Option A is the correct and verified answer.

NEW QUESTION # 15

Which of the following are minimum requirements for showing the Falcon Identity Verification Dialog on the end user's machine?

- A. Windows Vista and .NET 3.5
- B. Windows Server 2008 and PowerShell 5.1
- C. .NET 3.5 and PowerShell 5.1
- D. Internet Explorer 9 and Windows Server 2008

Answer: D

Explanation:

The Falcon Identity Verification Dialog is used to prompt users for identity verification during conditional access enforcement. According to the CCIS curriculum, Internet Explorer 9 and Windows Server 2008 represent the minimum supported requirements for rendering the Identity Verification Dialog on an end user's system.

This requirement exists because the dialog relies on supported browser and OS components to present authentication challenges reliably during enforcement workflows. Systems that do not meet these minimum requirements may fail to display the dialog correctly, impacting the enforcement of MFA or identity verification actions.

The other options reference runtime frameworks or PowerShell versions that are not directly responsible for rendering the verification dialog. Therefore, Option A is the correct and verified answer.

NEW QUESTION # 16

What trigger will cause a Falcon Fusion Workflow to activate from Falcon Identity Protection?

- A. New incident
- B. New endpoint detection
- C. Alert > Identity detection
- D. Spotlight user action > Host

Answer: C

Explanation:

Falcon Fusion workflows integrate directly with Falcon Identity Protection through identity-based triggers, allowing automated responses to identity threats. The correct trigger that activates a Falcon Fusion workflow from Identity Protection is Alert > Identity detection.

Identity detections are generated when Falcon observes suspicious or malicious identity behavior, such as credential abuse, abnormal authentication patterns, lateral movement attempts, or policy violations related to identity risk. These detections are distinct from endpoint-only detections or incidents and are specifically designed to represent identity-based attack activity.

While New incident and New endpoint detection are valid Falcon Fusion triggers in other Falcon modules, they are not the primary triggers for identity-focused automation. Similarly, Spotlight user action > Host relates to vulnerability management workflows rather than identity analytics.

The CCIS curriculum emphasizes that Falcon Fusion enables automated identity response, such as notifying security teams, disabling accounts, enforcing MFA, or triggering SOAR actions, based on identity detections.

Therefore, workflows tied to Alert > Identity detection allow organizations to respond quickly and consistently to identity threats, making Option C the correct answer.

NEW QUESTION # 17

The NIST SP 800-207 framework for Zero Trust Architecture defines validation and authentication standards for users in which network locations?

- A. All users both inside and outside of the network
- B. Only those users accessing the network remotely over VPN
- C. Only those users inside the network
- D. Only those users outside the network

Answer: A

Explanation:

The NIST SP 800-207 Zero Trust Architecture framework fundamentally rejects the concept of implicit trust based on network location. As outlined in both NIST guidance and reinforced in the CCIS curriculum, all users must be continuously validated and authenticated regardless of whether they are inside or outside the network perimeter.

Zero Trust assumes that threats can originate from anywhere, including internal networks. Therefore, authentication and authorization decisions must be made dynamically using identity, device posture, behavior, and risk signals—not network placement.

Falcon Identity Protection aligns directly with this principle by continuously evaluating identity behavior for all users, whether they authenticate from internal corporate networks, remote locations, or cloud environments.

Because Zero Trust applies universally, Option C is the correct and verified answer.

NEW QUESTION # 18

.....

Choosing to participate in CrowdStrike certification IDP exam is a wise choice, because if you have a CrowdStrike IDP authentication certificate, your salary and job position will be improved quickly and then your living standard will provide at the same time. But passing CrowdStrike certification IDP exam is not very easy, it needs to spend a lot of time and energy to master relevant IT professional knowledge. TestPassKing is a professional IT training website to make the training scheme for CrowdStrike Certification IDP Exam. At first you can free download part of exercises questions and answers about CrowdStrike certification IDP exam on www.TestPassKing.com as a try, so that you can check the reliability of our product. Generally, if you have tried TestPassKing's products, you'll be very confident of our products.
