## 최신 Public Cloud Security FCP\_ZCS\_AD-7.4 무료샘플문제 (Q51-Q56):

### 질문 # 51

How does autoscaling enhance HA for applications hosted in Azure?

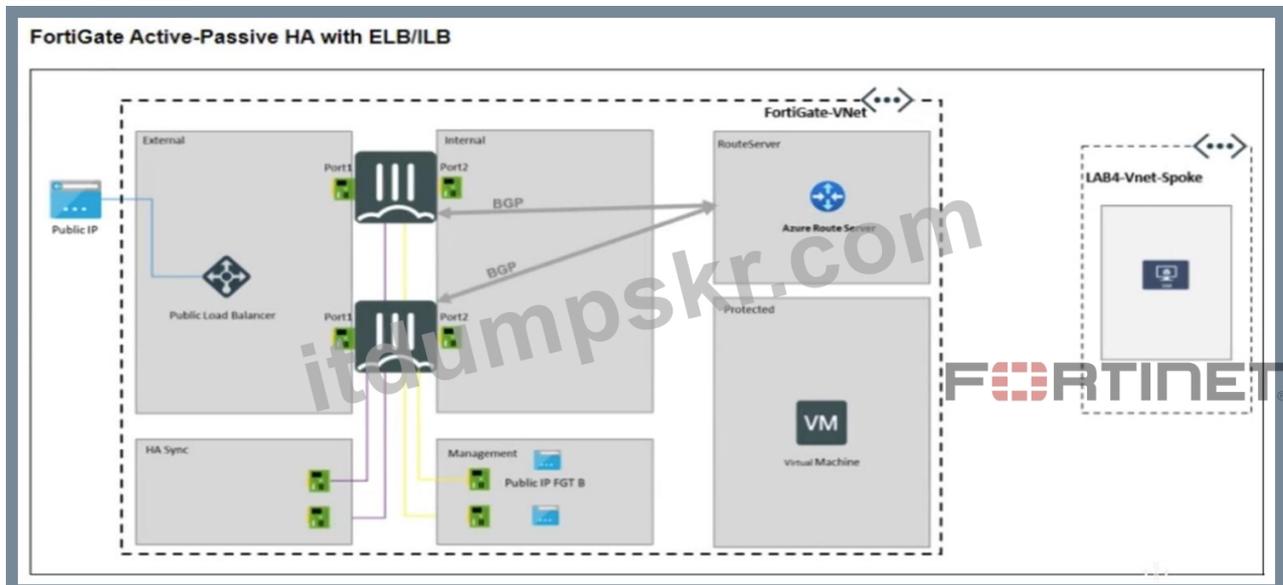

Response:

- A. By shifting traffic to underutilized servers
- B. By automatically adjusting the bandwidth
- C. By encrypting data transfers
- **D. By adding or removing resources based on demand**

정답: D

### 질문 # 52

Refer to the exhibit.

An Azure Route Server and an active-passive FortiGate with Elastic Load Balancing (ELB) and Internal Load Balancing (ILB) have been deployed successfully and they are sharing and populating BGP routes in the Protected VNet.

A Linux server has been deployed in a new VNet spoke. It is expected that Azure Route Server should inject the FortiGate BGP routes into the Linux server but that failed.

How can you diagnose the problem?

- A. Review FortiGate BGP neighbors
- **B. Monitor effective routes on the Azure network interface (NIC) of the Linux server**
- C. Verify the BGP setup on Azure Route Server
- D. Linux server doesn't support BGP negotiation with Azure Route Server

정답: B

설명:

The Linux server in the spoke VNet cannot directly peer BGP with the Azure Route Server, as it is not a BGP-enabled device.

Instead, Azure propagates routes to VMs through the effective route tables associated with their network interfaces (NICs).

Therefore, to diagnose why BGP routes are not reaching the Linux VM, you should monitor the effective routes on the NIC to verify if the routes from the FortiGate (via the Route Server) are being injected properly.

### 질문 # 53

What does Azure Sentinel primarily manage within the scope of Azure security services?

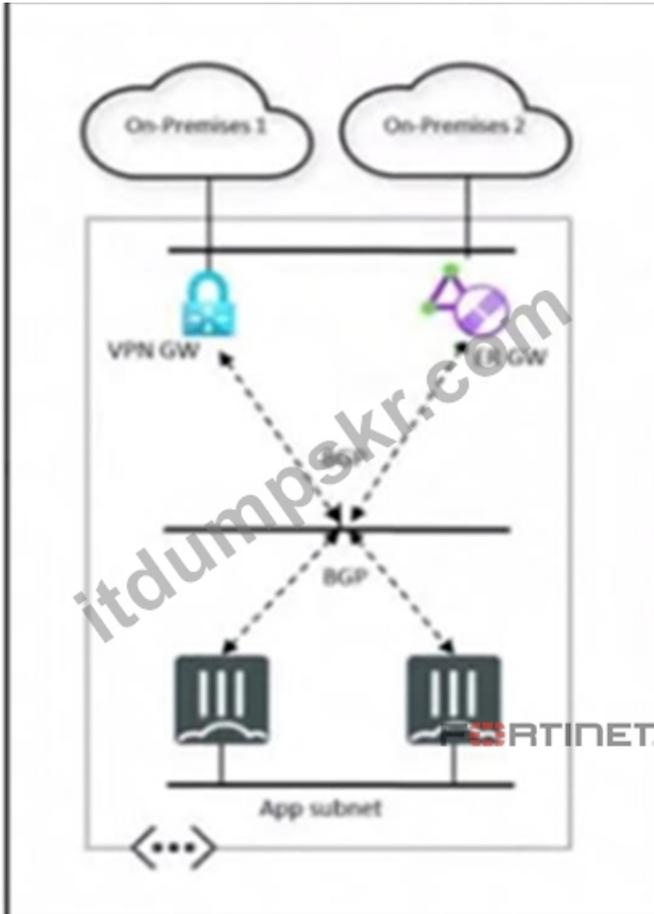

Response:

- A. VPN configurations
- B. Digital key protection
- C. Device management
- **D. Threat intelligence and analytics**

정답: D

질문 # 54

Refer to the exhibit.

In an expanding corporation, the different branches share resources connecting to Azure through Azure VPN Gateway and ExpressRoute Gateway.

Which Azure solution can you implement to simplify and centralize the seamless sharing of the dynamic routing between FortiGate VMs and branches?

- A. Azure Virtual WAN
- B. Azure Virtual Hub
- C. Azure Traffic Manager
- **D. Azure Route Server**

정답: D

설명:

Azure Route Server simplifies dynamic routing by allowing your FortiGate VMs to exchange BGP routes directly with Azure's networking fabric. This eliminates the need to manually update route tables and enables seamless, centralized communication between on-premises branches and Azure resources through both VPN Gateway and ExpressRoute Gateway.

질문 # 55

What Fortinet solution can be utilized in Azure to secure web applications?

myportal.utt.edu.tt, Disposable vapes
