TestKingIT CompTIA 220-1102 Dumps are validated by many more candidates, which can guarantee a high success rate. After you use our dumps, you still fail the exam so that TestKingIT will give you FULL REFUND. Or you can choose to free update your exam dumps. With such protections, you don't need to worry.

CompTIA 220-1102 certification exam is an excellent way for IT professionals to demonstrate their expertise and knowledge in the field. It is recognized by top companies worldwide and is often required by employers as a minimum requirement for IT positions. CompTIA A+ Certification Exam: Core 2 certification is valid for three years, after which the candidate will need to renew it by

taking a recertification exam or earning Continuing Education Units (CEUs) through training and professional development activities. Overall, the CompTIA 220-1102 Certification Exam is an essential credential for IT professionals looking to advance their careers in the field.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q734-Q739):

NEW QUESTION # 734

A user reports that after a recent software deployment to upgrade applications, the user can no longer use the Testing program. However, other employees can successfully use the Testing program.

INSTRUCTIONS

Review the information in each tab to verify the results of the deployment and resolve any issues discovered by selecting the:

Index number of the Event Viewer issue

First command to resolve the issue

Second command to resolve the issue

BSOD

```
A problem has been detected and system has been shutdown to prevent damage to your computer.

DRIVER_IRQL_NOT_LES_OR_EQUAL

If this is the first time you've seen this stop error screen, restart your computer, if this screen appears again,
follow these steps:

Check to make sure any new hardware or software is properly installed. If this is a new installation, ask your hardware
or software manufacturer for any system updates you might need.

If problems continue, disable or remove any newly installed hardware or software. Disable BIOS memory options such as
caching or shadowing. If you need to use Safe Mode to remove or disable components, restart your computer, press F8 to
select Advanced Startup Options, and then select Safe Mode.

Technical information:

*** STOP: 0x000000D1 (0x00000000, 0x00000007, 0x00000000, 0xG74H2574)

*** strtl.sys - Address G74H2574 base at 674H0000, DateStamp 4eh2534df

Beginning dump of physical memory

Physical memory dump complete.

Contact your system administrator or technical support group for further assistance.
```

Commands:

The screenshot shows a software interface with four tabs: BSOD, Commands, Event Viewer, and System Error. The 'Commands' tab is selected and highlighted in blue. Below the tabs, there is a list of commands to be executed in a command prompt. The commands are: `Get-WmiObject win32_computersystem`, `Get-WmiObject win32_logicaldisk`, `ls msvc*`, `ls`, and `tasklist | sort`. The interface also includes buttons for 'Show Question' and 'Reset All Answers'.

ls msvc*
tasklist | sort
```

Event Viewer Issue

1st CLI Resolution Select Resolution

Answer:

Explanation:

see the answer below in explanation.

Explanation:

The user is experiencing a system error that prevents them from using the Testing program. The error message indicates that the file MSVCP100.dll is missing from the computer. This file is part of the Microsoft Visual C++ 2010 Redistributable Package, which is required by some applications to run properly. The error may have occurred due to a corrupted or incomplete software deployment. To resolve this issue, the user needs to restore the missing file and register it in the system. One possible way to do this is to copy the file from another computer that has the Testing program installed and working, and then use the regsvr32 command to register it. The steps are as follows:

On another computer (User-PC02) that has the Testing program installed and working, locate the file MSVCP100.dll in the folder C:\Program Files\Testing.

Share the folder C:\Windows\System32 on User-PC02 by right-clicking on it, selecting Properties, then Sharing, then Advanced Sharing, then checking Share this folder, then clicking OK.

On the user's computer (User-PC01), open a command prompt as an administrator by clicking Start, typing cmd, right-clicking on Command Prompt, and selecting Run as administrator.

In the command prompt, type the following command to copy the file MSVCP100.dll from User-PC02 to User-PC01: copy "C:\Program Files\Testing\msvcp100.dll" "\\User-PC02\C\$\Windows\System32" After the file is copied, type the following command to register it in the system: regsvr32 msvc100.dll Restart the user's computer and try to run the Testing program again.

Therefore, based on the instructions given by the user, the correct answers are:

Select Event Viewer Issue: 2187

Select First Command: copy "C:\Program Files\Testing\msvcp100.dll" "\\User-PC02\C\$\Windows\System32" Select Second Command: regsvr32 msvc100.dll

NEW QUESTION # 735

Which of the following file extensions are commonly used to install applications on a macOS machine? (Select THREE).

- A. .mac
- B. .msi
- C. .Pkg
- D. .app
- E. .appx
- F. .deb
- G. .apk
- H. .dmg

Answer: C,D,H

Explanation:

Explanation

<https://support.microsoft.com/en-us/windows/common-file-name-extensions-in-windows-da4a4430-8e76-89c5-5>

.pkg and .dmg are files used to distribute and install applications on macOS. .pkg files are installer packages that may contain multiple files and executable code, while .dmg files are disk images that can contain a single bundled application or multiple applications. .app files are typically the main executable files for macOS applications. The other options listed are file extensions for applications or installers on other platforms (such as .deb for Debian-based Linux systems, .msi for Windows, and .apk for Android). This information is covered in the CompTIA A+ Core2 documents/guide under the Mac OS section.

NEW QUESTION # 736

An organization's Chief Financial Officer (CFO) is concerned about losing access to very sensitive, legacy unmaintained PII on a workstation if a ransomware outbreak occurs. The CFO has a regulatory requirement to retain this data for many years. Which of the following backup methods would BEST meet the requirements?

- A. Weekly, differential backups that are stored in a cloud-hosting provider
- B. A daily, incremental backup that is saved to the corporate file server
- C. An additional, secondary hard drive in a mirrored RAID configuration
- D. A full backup of the data that is stored off-site in cold storage

Answer: D

Explanation:

Explanation

According to CompTIA A+ Core 2 objectives, a full backup stored off-site provides the greatest protection against data loss in the event of a ransomware attack or other data disaster. By storing the backup in a separate physical location, it is less likely to be affected by the same event that could cause data loss on the original system. Cold storage is a term used for data archiving, which typically refers to a long-term storage solution that is used for retaining data that is infrequently accessed, but still needs to be kept for regulatory or compliance reasons.

NEW QUESTION # 737

A macOS user is installing a new application. Which of the following system directories is the software MOST likely to install by default?

- A. /Applications
- B. /usr/bin
- C. C:\Program Files
- D. /etc/services

Answer: A

Explanation:

The software is most likely to install by default in the /Applications directory, which is the standard location for macOS applications. This directory can be accessed from the Finder sidebar or by choosing Go > Applications from the menu bar. The /Applications directory contains all the applications that are available to all users on the system¹. Some applications might also offer the option to install in the ~/Applications directory, which is a personal applications folder for a single user². The /etc/services directory is a system configuration file that maps service names to port numbers and protocols³. The /usr/bin directory is a system directory that contains executable binaries for various commands and utilities⁴. The C:\Program Files directory is a Windows directory that does not exist on macOS.

NEW QUESTION # 738

Which of the following is command options is used to display hidden files and directories?

- A. -t
- B. -lh
- C. -a
- D. -s

Answer: C

Explanation:

Explanation

The -a option is used to display hidden files and directories in a command-line interface. Hidden files and directories are those that start with a dot (.) and are normally not shown by default. The -a option stands for "all" and shows all files and directories, including the hidden ones. The -a option can be used with commands such as ls, dir, or find to list or search for hidden files and directories. The -s, -lh, and -t options are not used to display hidden files and directories. The -s option stands for "size" and shows the size of files or directories in bytes. The -lh option stands for "long human-readable" and shows the size of files or directories in a more readable format, such as KB, MB, or GB. The -t option stands for "time" and sorts the files or directories by modification time. References:
