

ASET-Ethics-Examination Test Online - ASET-Ethics-Examination Latest Exam Notes

ASET CNIM Exam Questions With Correct Solutions | Latest Update Graded A+

Resting membrane potential is created by differences between the inside and outside of the cell in ion concentrations of

1. K⁺
2. K⁺ and Ca⁺⁺
3. K⁺, Na⁺ and Cl⁻
4. Na⁺, Ca⁺⁺ and Cl⁻ - Answer K⁺, Na⁺, and Cl⁻

Excitation of the postsynaptic neuron is caused by the neurotransmitter

1. gamma amino butyric acid
2. glycine
3. para amino butyric acid
4. glutamate - Answer Glutamate

Wave III of the BAER is generated by the

1. superior olivary complex
2. inferior colliculus
3. lateral lemniscus
4. medial geniculate - Answer Superior olivary complex

Lying between the adjacent surfaces of the vertebral bodies and bonding them together, are the

1. pedicles
2. intervertebral discs
3. supraspinous ligaments
4. spinal nerves - Answer Intervertebral discs

Which of the following UE SSEP response is considered a "stationary potential"

1. N20
2. N13
3. P14
4. N18 - Answer N13

The initial waveform recorded of a near-field potential is

1. always obscured by stimulus artifact
2. negative due to depolarization of membrane potentials
3. positive due to electronic depolarization of the membrane under the recording electrode

While buying ASET-Ethics-Examination training materials online, you may pay more attention to money safety. If you choose ASET-Ethics-Examination learning materials of us, we can ensure you that your money and account safety can be guaranteed. Since we have professional technicians check the website every day, therefore the safety can be guaranteed. In addition, ASET-Ethics-Examination Training Materials of us are high quality, they contain both questions and answers, and it's convenient for you to check answers after practicing. We have online chat service staff, if you have any questions about ASET-Ethics-Examination learning materials, you can have a conversation with us.

We can say that how many the ASET-Ethics-Examination certifications you get and obtain qualification certificates, to some extent determines your future employment and development, as a result, the ASET-Ethics-Examination exam guide is committed to helping you become a competitive workforce, let you have no trouble back at home. Actually, just think of our ASET-Ethics-Examination Test Prep as the best way to pass the exam is myopic. They can not only achieve this, but ingeniously help you remember more content at the same time.

>> ASET-Ethics-Examination Test Online <<

Download ASET ASET-Ethics-Examination Exam Dumps after Paying Affordable Charges

Do you want to pass your exam with the least time? If you do, then we will be your best choice. ASET-Ethics-Examination training materials are edited and verified by experienced experts in this field, therefore the quality and accuracy can be guaranteed. Besides ASET-Ethics-Examination exam materials contain both questions and answers, and it's convenient for you to have a check after practicing. We have online and offline chat service, if you have any questions about ASET-Ethics-Examination Training Materials, you can consult us, we will give you reply as quickly as possible.

ASET Ethics Examination-ASET Professional Practice Exam (PPE) Sample Questions (Q26-Q31):

NEW QUESTION # 26

A regulated member of ASET prepares permits for municipal construction projects. In reviewing a recent application for a power plant, the member believes that the plans provided are inadequate to meet environmental regulation requirements. The member takes this information to a supervisor, who disagrees with the assessment and orders the member to issue the permit. The member refuses to issue the permit and the discussion is closed. The following week, the member discovers that the permit for the power plant was issued by the supervisor. What is the first step the member should take to address the situation?

- A. Wait until the power plant is developed and then notify the appropriate regulatory authority.
- B. Report the supervisor to ASET for unethical conduct.
- C. No further action is required from the member.
- **D. Report concerns with the issuing of the permit to upper management.**

Answer: D

Explanation:

ASET members have a paramount duty to protect the public and the environment. When a member identifies a violation of environmental regulations, they cannot simply look the other way, even if overruled by a supervisor. The ethical obligation is to ensure that the consequences of disregarding professional advice are clearly presented. However, the escalation of such disputes must follow a logical and professional chain of command before seeking external intervention. While the member rightfully refused to personally issue the non-compliant permit, discovering that the supervisor bypassed them to issue it anyway requires further action. The correct immediate next step is to escalate the concern internally by reporting the issue to upper management. This allows the organization the opportunity to correct the error, overrule the immediate supervisor, and comply with the law internally. Going straight to an external regulator or ASET (whistleblowing) is generally considered a last resort, to be used only after internal avenues have been exhausted or if there is a threat of immediate, catastrophic harm.

NEW QUESTION # 27

Which of the following is the first phase of an environmental site assessment?

- A. Recommending a remediation process
- B. Providing a detailed description of the contaminants
- C. Examining the most probable locations of contamination by conducting tests
- **D. Gathering information about the property from all of the parties involved**

Answer: D

Explanation:

In environmental engineering and technology, an Environmental Site Assessment (ESA) is conducted in strict, standardized phases to manage risk and costs effectively. A Phase 1 ESA is explicitly a non-intrusive, preliminary investigation. Its sole purpose is to determine the likelihood that environmental contamination exists on a property. The correct action during this first phase is gathering information about the property. This involves conducting historical research (reviewing old maps, land titles, and aerial photographs), conducting site walk-throughs to look for visual evidence (like stained soil or abandoned barrels), and interviewing past and present owners or neighbors. Phase 1 does not involve physically testing the soil or water (Option D); physical sampling and detailed descriptions of contaminants happen in a Phase 2 ESA. Recommending and executing a cleanup or remediation process (Option A) is the function of a Phase 3 ESA.

NEW QUESTION # 28

In order to be considered for regulated membership, an applicant must have a minimum of how many years of experience?

- A. 4 years

- B. 3 years
- **C. 2 years**
- D. 1 year

Answer: C

Explanation:

Registration as a Certified Engineering Technologist (C.E.T.) or Certified Technician (C.Tech.) through ASET is not based on academic credentials alone. To ensure that members possess the practical competency required to protect the public and operate safely in real-world environments, ASET mandates a strict experiential requirement. Under ASET's certification regulations, an applicant must possess a minimum of two (2) years of acceptable, verifiable technical experience in their specific discipline of practice. This experience must be acquired after the completion of at least half of their academic program and is typically evaluated by a Board of Examiners to ensure it meets the required level of complexity, independent judgment, and application of technical principles. This two-year minimum ensures that newly regulated members have moved beyond theoretical academic knowledge and have successfully demonstrated their ability to perform competently and ethically under the supervision of senior professionals before being granted the right to use protected professional designations.

Here is the fourth batch of 10 questions (Questions 31 to 40), carefully reviewed, corrected, and formatted with comprehensive explanations based on the ASET Code of Ethics, the Engineering and Geoscience Professions Act (EGPA), and professional practice standards.

NEW QUESTION # 29

A regulated member of ASET employed by a computer manufacturer designs some computer equipment and signs off on the drawings. Although the design has been properly prepared, the manufacturing process is faulty, which increases the cost. The manufacturing division suggests modifications to the design to reduce costs, but the member finds that they would reduce the reliability of the product and would likely cost the company more through warranty claims. The regulated member's supervisor asks the member to sign off on the changes anyway. Which of the following should the member do?

- A. Sign off on the changes.
- **B. Raise the reliability concerns to the supervisor.**
- C. Go to various media outlets to expose the company.
- D. Report the issue to ASET.

Answer: B

Explanation:

This scenario presents an ethical dilemma involving the duty to an employer's long-term interests versus short-term manufacturing pressures. The ASET Code of Ethics requires members to "present clearly to employers and clients the possible consequences if professional decisions or judgments are overruled or disregarded." In this case, the proposed design changes do not necessarily threaten public health or safety (which would mandate a strict refusal); rather, they threaten product reliability and the company's long-term financial health via warranty claims. Signing off immediately (Option A) without outlining these risks is a failure of the professional's advisory duty. However, escalating to ASET (Option B) or the media (Option D) is vastly disproportionate and unprofessional, as no safety laws are being broken. The correct, ethical step is to act as a competent advisor: raise the reliability concerns directly to the supervisor, explicitly outlining the negative financial and reputational consequences of the cost-cutting measure. If the employer still chooses to proceed after being fully informed, the member has fulfilled their ethical duty regarding corporate business decisions.

NEW QUESTION # 30

Why are professional stamps or seals affixed to certain workplace documents?

- **A. To indicate that a professional member accepts responsibility for the material**
- B. To indicate that the documentation has been finalized
- C. To copyright the material on behalf of the professional member's employer
- D. To add a professional member's contact information to the documentation

Answer: A

Explanation:

The professional stamp or seal is one of the most important legal tools entrusted to regulated members (such as P.Techs or Professional Engineers). It is not merely a bureaucratic "finalized" stamp (Option A), nor is it a mechanism for establishing copyright

(Option B) or sharing contact information (Option C). Affixing a professional seal to a document (such as design drawings, specifications, or technical reports) is a legally binding declaration. It signifies to the public, clients, and municipal authorities that a legally qualified professional either personally prepared the work or directly supervised its preparation. More importantly, it serves as a formal guarantee that the professional explicitly accepts full legal and professional responsibility for the accuracy, safety, and code compliance of the contents.

If a sealed design fails and causes injury, the professional who applied the seal is the individual held legally accountable for negligence.

NEW QUESTION # 31

.....

You can also become part of this skilled and qualified community. To do this just enroll in the ASET Ethics Examination-ASET Professional Practice Exam (PPE) Exam and start preparation with real and valid ASET-Ethics-Examination practice test questions right now. The ASET Ethics Examination-ASET Professional Practice Exam (PPE) practice test questions are checked and verified by experienced and qualified ASET-Ethics-Examination Exam trainers. So you can trust PrepAwayPDF ASET Ethics Examination-ASET Professional Practice Exam (PPE) practice test questions and start preparation with confidence.
