The majority of people encounter the issue of finding extraordinary Splunk SPLK-1002 exam dumps that can help them prepare for the actual Splunk SPLK-1002 Exam. They strive to locate authentic and up-to-date Splunk SPLK-1002 practice questions for the Splunk Core Certified Power User Exam exam, which is a tough ask.

Splunk SPLK-1002 Exam Overview:

Certification Vendor:	Splunk
Exam Name:	Splunk Core Certified Power User Exam
Exam Number:	SPLK-1002
Exam Duration:	60 minutes
Exam Format:	Multiple choice questions
Related Certifications:	Splunk Core Certified User Splunk Core Certified Advanced Power User Splunk Enterprise Certified Admin Splunk Cloud Certified Admin

Exam Price:	$130 USD per attempt
Real Exam Qty:	65
Available Languages:	English
Recommended Training:	Splunk Core Certified Power User Learning Path
Exam Registration:	Official Splunk Certification Registration
Sample Questions:	Splunk SPLK-1002 Sample Questions
Exam Way:	Online proctored or onsite via Pearson VUE
Pre Condition:	None
Official Syllabus URL:	https://www.splunk.com/en_us/training/certification-track/splunk-core-certified-power-user.html

Pass Guaranteed Quiz Splunk - SPLK-1002 - Splunk Core Certified Power User Exam Newest Latest Braindumps Ebook

Our SPLK-1002 study guide design three different versions for all customers. These three different versions include PDF version, software version and online version, they can help customers solve any problems in use, meet all their needs. Although the three major versions of our SPLK-1002 exam dumps provide a demo of the same content for all customers, they will meet different unique requirements from a variety of users based on specific functionality. The most important feature of the online version of our SPLK-1002 Learning Materials are practicality. The online version is open to all electronic devices, which will allow your device to have common browser functionality so that you can open our products. At the same time, our online version of the SPLK-1002 study guide can also be implemented offline, which is a big advantage that many of the same educational products are not able to do on the market at present.

Splunk Core is widely used by organizations to extract insights and value from machine-generated data. The SPLK-1002 Certification Exam is a testament to an individual's understanding of Splunk Core and their ability to use it effectively. Splunk Core Certified Power User Exam certification provides a competitive edge in the job market and validates the individual's expertise in Splunk Core. Moreover, it also provides a path for individuals to advance their careers in the field of data analytics and security.

Splunk Core Certified Power User Exam Sample Questions (Q114-Q119):

NEW QUESTION # 114
A user runs the following search:
index-X sourcetype=Y I chart count (domain) as count, sum (price) as sum by product, action usenull=f useother-f Which of the following table headers match the order this command creates?

- A. Product, sum: addtocart, sum: remove, sum: purchase, count: addtocart, count: remove, count: purchase
- B. Product, count: addtocart, count: remove, count: purchase, sum: addtocart, sum: remove, sum: purchase
- C. The chart command does not allow for multiple statistical functions.
- D. Count: product, sum: product, count: action, sum: action

Answer: B

Explanation:
The correct answer isC. Product, count: addtocart, count: remove, count: purchase, sum: addtocart, sum: remove, sum: purchase1.
In Splunk, thechartcommand is used to create a table or a chart visualization from your data2.
Thechartcommand takes at least one function and one field, and optionally another field to group by2.
In the given search, thechartcommand is used with two functions (countandsum), two fields (domainandprice), and two fields to group by (productandaction).Theusenull=fanduseother=foptions are used to exclude null values and other values from the chart2.
Thechartcommand creates a table with headers that match the order of the fields and functions in the command1.The headers for thecountfunction are prefixed withcount:, and the headers for thesumfunction are prefixed withsum:1.The values of theproductandactionfields are used as the suffixes for the headers1.
Therefore, the table headers created by this command areProduct,count: addtocart,count: remove,count: purchase,sum: addtocart,sum: remove, andsum: purchase1.

NEW QUESTION # 115
Which group of users would most likely use pivots?

- A. Administrators
- B. Knowledge Managers
- C. Users
- D. Architects

Answer: C

NEW QUESTION # 116
Which of the following statements about calculated fields in Splunk is true?

- A. Calculated fields can only be used in saved reports.
- B. Calculated fields can only be used in dashboards.
- C. Calculated fields cannot be chained together to create more complex fields
- D. Calculated fields can be chained together to create more complex fields.

Answer: D

Explanation:
The correct answer is B. Calculated fields can be chained together to create more complex fields.
Calculated fields are fields that are added to events at search time by using eval expressions. They can be used to perform calculations with the values of two or more fields already present in those events. Calculated fields can be defined with Splunk Web or in the props.conf file. They can be used in searches, reports, dashboards, and data models like any other extracted field1.
Calculated fields can also be chained together to create more complex fields. This means that you can use a calculated field as an input for another calculated field. For example, if you have a calculated field named total that sums up the values of two fields named price and tax, you can use the total field to create another calculated field named discount that applies a percentage discount to the total field. To do this, you need to define the discount field with an eval expression that references the total field, such as:
discount = total * 0.9
This will create a new field named discount that is equal to 90% of the total field value for each event2.
References:
* About calculated fields
* Chaining calculated fields

NEW QUESTION # 117
When creating a data model, which root dataset requires at least one constraint?

- A. Root search dataset
- B. Root event dataset
- C. Root transaction dataset
- D. Root child dataset

Answer: B

Explanation:
The correct answer is B. Root event dataset. This is because root event datasets are defined by a constraint that filters out events that are not relevant to the dataset. A constraint for a root event dataset is a simple search that returns a fairly wide range of data, such assourcetype=access_combined. Without a constraint, a root event dataset would include all the events in the index, which is not useful for data modeling.You can learn more about how to design data models and add root event datasets from the Splunk documentation1.
The other options are incorrect because root transaction datasets and root search datasets have different ways of defining their datasets, such as transaction definitions or complex searches, and root child datasets are not a valid type of root dataset.

NEW QUESTION # 118
Which of the following statements about tags is true? (select all that apply.)

- A. Tags categorize events based on a search.

- B. Tags are designed to make data more understandable.
- C. Tags are based on field/vale pairs.
- D. Tags are case-insensitive.

Answer: D
