Top PCED-30-02 Exam Objectives Pdf Free PDF | Professional Exam PCED-30-02 Dump: PCED - Certified Entry-Level Data Analyst with Python

They are using outdated materials resulting in failure and loss of money and time. So to solve all these problems, CramPDF offers actual PCED-30-02 Questions to help candidates overcome all the obstacles and difficulties they face during PCED-30-02 examination preparation. With vast experience in this field, CramPDF always comes forward to provide its valued customers with authentic, actual, and genuine PCED-30-02 exam dumps at an affordable cost.

Python Institute PCED - Certified Entry-Level Data Analyst with Python Sample Questions (Q24-Q29):

NEW QUESTION # 24

Which of the following code snippets will output True for both printfunctions by correctly identifying the type of each variable and performing valid operations?

- A.
- B.
- C.
- D.

Answer: C

Explanation:

Adding an integer and a float produces a float result, so checking that the type of the sum is float evaluates to True. The variable holding 3.0 is a float, so the isinstance check for float also evaluates to True.

NEW QUESTION # 25

You are working with city names entered by users. These names may contain inconsistent capitalization and unwanted spaces.

To standardize the data, you want to:

- Remove any leading or trailing whitespace, and
- Capitalize the first letter of each word (e.g., convert "new york" to "New York").

For example:

"New york " → "New York"

"LOS ANGELES" → "Los Angeles"

You are given a variable `city` that contains the raw input.

Which line of code correctly updates the value of `cleaned_city` to apply the required transformation? Select the best answer.

- A. `cleaned_city = city.upper().replace(" ", "")`
- B. `cleaned_city = city.strip().title()`
- C. `cleaned_city = city.upper().strip()`
- D. `cleaned_city = city.strip().capitalize()`

Answer: B

Explanation:

Stripping removes leading and trailing whitespace, and applying title formatting capitalizes the first letter of each word while converting the remaining letters to lowercase, producing the correctly standardized city name.

NEW QUESTION # 26

A Python script includes the expression `not False and True`. The developer is unsure how logical operators are evaluated in terms of precedence. What will be the final Boolean result of this expression?

- A. True
- B. None
- C. False
- D. Error

Answer: A

Explanation:

The not operator has higher precedence than and, so `not False` becomes True first. Then True and True is evaluated, resulting in True as the final Boolean value.

NEW QUESTION # 27

The following chart shows how a student spends 24 hours in a day:

Which statements are most accurate? (Choose two.)

- A. Leisure accounts for a moderate portion of the student's daily schedule, larger than commuting but smaller than the time spent at school.
- B. Sleep and school take up the majority of time in a day.
- C. Commuting is the second most time-consuming activity.
- D. School and homework together take up half of the day's time.
- E. More time is spent commuting than on leisure.
- F. Leisure and meals combined equal the time spent at school.

Answer: A,B

NEW QUESTION # 28

A dictionary is defined as `d = {"a":1, "b":2}`. The programmer accesses `d["c"]`. What happens when this line executes?

- A. Adds key automatically
- B. Returns 0
- C. Returns None
- D. Raises `KeyError`

Answer: D

Explanation:

Accessing a non-existent key using square brackets raises a `KeyError`. Python does not automatically create missing keys, so the program will terminate unless the exception is handled.

NEW QUESTION # 29

.....

If you have limited budget, and also need complete value package, why not try our CramPDF's PCED-30-02 exam training materials. It is easy to understand with reasonable price and high accuracy. It's suitable for all kinds of learners. If you choose CramPDF' PCED-30-02 Exam Training materials, you will get one year free renewable service.
