EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q38-Q43):

NEW QUESTION # 38

Question:

A company is implementing a new information security policy. They want to ensure that the policy aligns with its risk appetite, internal policies, and external regulations. Which framework can help the company achieve this goal?

- A. COBIT
- B. GDPR
- C. ITIL
- D. GRC

Answer: D

Explanation:

GRC stands for Governance, Risk, and Compliance. It's a comprehensive framework that helps organizations align their IT

operations with business objectives, manage risks effectively, and ensure compliance with internal and external regulations.

* GDPR: A specific regulation focusing on data protection and privacy in the EU.

* COBIT: A framework for IT governance and management, but not as comprehensive in risk and compliance aspects.

* ITIL: Focuses on IT service management, not directly on governance or compliance.

NEW QUESTION # 39

Question:

What is true about the FCIP?

- A. Connects local iSCSI SANs to remote iSCSI SANs
- **B. Connects local FC SANs to remote FC SANs**
- C. Connects local FC or iSCSI SANs to remote FC or iSCSI SANs
- D. Connects local iSCSI SANs to remote FC SANs

Answer: B

Explanation:

FCIP (Fibre Channel over IP) is used to tunnel Fibre Channel traffic over IP networks. Its primary use case:

* Connecting local FC SANs to remote FC SANs for disaster recovery and remote data replication.

* It encapsulates FC frames into IP packets, transporting them over existing IP infrastructure.

* Option B/C/D: iSCSI is not directly involved in FCIP's primary function.

NEW QUESTION # 40

Question:

How does Storage Class Memory (SCM) compare to DRAM and flash memory in terms of speed?

- A. SCM is faster than both DRAM and flash
- B. SCM is slower than flash but faster than HDDs
- **C. SCM is slower than DRAM but faster than flash**
- D. SCM is as fast as DRAM

Answer: C

Explanation:

Storage Class Memory (SCM) bridges the gap between DRAM and NAND flash memory. It offers faster access times than flash memory but is still slower than DRAM. SCM provides non-volatile storage with performance characteristics closer to DRAM, making it suitable for applications requiring high-speed data access.

NEW QUESTION # 41

Question:

A company is looking for a backup solution that can reduce its IT management overhead and offer scalability and flexibility. Which type of backup solution would meet these requirements?

- A. Agent-based backup
- B. Image-based backup
- C. Tape-based backup
- **D. Cloud-based backup**

Answer: D

Explanation:

Cloud-based backup solutions are managed by third-party providers and offer easy scalability, flexibility, and reduced IT management overhead. They allow businesses to focus on operations while the provider manages infrastructure, updates, and capacity.

- * Image-based backup: Captures entire system images but may still require local storage and management.
 - * Agent-based backup: Deploys agents to servers, requiring management of the agents.
 - * Tape-based backup: Involves hardware and manual processes for storage, increasing management burden.

NEW QUESTION # 42

Question:

What is a key advantage of cloning a VM?

- A. Eliminates the need to create multiple snapshots for a VM
- B. Improves the performance of existing and new VMs
- C. Saves time when creating multiple identical copies of a VM
- D. Ability to run new VMs simultaneously with the same IP address

Answer: C

Explanation:

VM cloning allows administrators to create exact copies of a virtual machine quickly.

Saves time compared to manually configuring new VMs.

Useful for testing, development, and scaling environments.

Each clone can be independently modified after creation.

* Same IP address is typically not the case (clones get unique addresses).

* Snapshots provide rollback points, not full VM clones.

* Performance does not improve because of cloning itself.
