C_SEC_2405 Valid Exam Papers | New C_SEC_2405 Test Camp

To fit in this amazing and highly accepted exam, you must prepare for it with high-rank practice materials like our C_SEC_2405

study materials. Our C_SEC_2405 exam questions are the Best choice in terms of time and money. If you are a beginner, start with the learning guide of C_SEC_2405 Practice Engine and our products will correct your learning problems with the help of the C_SEC_2405 training braindumps.

SAP Certified Associate - Security Administrator Sample Questions (Q21-Q26):

NEW QUESTION # 21

Which SU01 user types are NOT enabled for interaction? Note: There are 2 correct answers to this question.

- A. System
- B. Dialog
- C. Service
- D. Communications Data

Answer: A,C

Explanation:

In SAP, certain SU01 user types are not enabled for interactive use:

* Service Users (A):

* Designed for background jobs or tasks requiring anonymous or shared access.

* Cannot log in interactively.

* System Users (B):

* Used for communication between systems and background processes.

* Does not support interactive login.

Why Others Are Incorrect:

* Dialog Users (C): Designed specifically for interactive logins.

* Communications Data (D): Often refers to communication-specific settings, not user types.

SAP Security References:

* SAP Help Portal: User Type Overview

* SAP Documentation: SU01 User Type Functionalities

NEW QUESTION # 22

Which privilege types are available in SAP HANA Cloud? Note: There are 3 correct answers to this question.

- A. Application
- B. System
- C. Analytic
- D. Package
- E. Object

Answer: B,C,E

Explanation:

SAP HANA Cloud supports three main privilege types: System, Analytic, and Object. System privileges grant administrative permissions, such as managing users, schemas, or system configurations, and are typically assigned to administrators. Analytic privileges control access to analytical data, such as calculations or data models, allowing fine-grained restrictions on data views based on user roles, which is crucial for business intelligence scenarios. Object privileges provide access to specific database objects, like tables, views, or procedures, enabling users to perform actions such as SELECT or EXECUTE on these objects. These privilege types ensure comprehensive access control in SAP HANA Cloud. Package privileges are relevant in SAP HANA on-premise but not in the cloud version, and Application privileges are not a standard category in SAP HANA Cloud's security model. By leveraging System, Analytic, and Object privileges, SAP HANA Cloud ensures secure and flexible data access management, supporting diverse use cases from administration to analytics.

NEW QUESTION # 23

Which of the following can you use to check if there is an application start lock on an application contained in a PFCG role? Note: There are 2 correct answers to this question.

- A. Transaction SUIM - Transactions Executable with Profile report
- B. Transaction SM01_CUS
- C. Transaction SM01_DEV
- D. Transaction SUIM - Executable Transactions report

Answer: A,D

Explanation:

To check if there is an application start lock on an application within a PFCG role, the SUIM (System User Information System) reports "Executable Transactions report" and "Transactions Executable with Profile report" are used. The Executable Transactions report (transaction SUIM) identifies transactions within a role and can indicate if any are locked, preventing their execution, by cross-referencing with system lock settings.

The Transactions Executable with Profile report analyzes transactions executable via a role's profile, highlighting any locked transactions that would block application starts. These reports provide detailed insights into role-based access and lock status, ensuring administrators can verify application availability.

Transaction SM01_CUS is used for locking transactions system-wide, not for checking role-specific locks, and SM01_DEV is not a standard SAP transaction for this purpose. By leveraging SUIM reports, administrators can efficiently manage and troubleshoot application access, ensuring that PFCG roles align with security requirements and that locked applications do not disrupt business processes.

NEW QUESTION # 24

What must you do if you want to enforce an additional authorization check when a user starts an SAP transaction?

- A. Assign the authorization object to be checked to the chosen transaction code in the SAP Default authorization data using transaction SU22 and set Check Indicator to "Check".
- B. Assign the authorization object and permissions to the chosen transaction code using transaction SE93.
- C. Assign the authorization object to be checked to the chosen transaction code with transaction SU24 and set Default Status to "Yes".
- D. Assign authorization object S_START to the chosen transaction code with transaction SU24 and specify the Program ID and Object Type.

Answer: B

Explanation:

To enforce an additional authorization check when a user starts an SAP transaction, you must assign the relevant authorization object and its permissions to the transaction code using transaction SE93. This transaction allows you to define or modify the properties of a transaction, including specifying authorization objects that must be checked when the transaction is executed. By linking the authorization object directly to the transaction in SE93, the system enforces the additional check at the point of transaction execution, ensuring that only authorized users can proceed. Transactions SU24 and SU22 are used for maintaining authorization defaults, but they do not directly enforce checks at transaction start, and S_START is specific to Fiori app authorizations, not general transactions.

NEW QUESTION # 25

Which privilege types are available in SAP HANA Cloud? Note: There are 3 correct answers to this question.

- A. Application
- B. System
- C. Analytic
- D. Object
- E. Package

Answer: B,D,E

NEW QUESTION # 26

.....

You have an option to try the C_SEC_2405 exam dumps demo version and understand the full features before purchasing. You can download the full features of C_SEC_2405 PDF Questions and practice test software right after the payment. DumpsValid has

created the three best formats of C_SEC_2405 practice questions. These Formats will help you to prepare for and pass the SAP C_SEC_2405 Exam. C_SEC_2405 pdf dumps format is the best way to quickly prepare for the C_SEC_2405 exam. You can open and use the SAP Certified Associate - Security Administrator pdf questions file at any place. You don't need to install any software.
