

Trustworthy Test 156-536 Book | Easy To Study and Pass Exam at first attempt & Well-Prepared CheckPoint Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES)

P.S. Free & New 156-536 dumps are available on Google Drive shared by GetValidTest: <https://drive.google.com/open?id=1Rca64cOAbg5E4JrKwpJFhMeLoQU50jjD>

Our 156-536 exam questions have three versions: the PDF, Software and APP online. Also, there will have no extra restrictions to your learning because different versions have different merits. All in all, you will not be forced to buy all versions of our 156-536 Study Materials. You have the final right to select. Please consider our 156-536 learning quiz carefully and you will get a beautiful future with its help.

CheckPoint 156-536 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Deploying Harmony Endpoint Data Security Protection: In this domain, CheckPoint Security Administrators will demonstrate their skills in deploying data security protections within Harmony Endpoint. This includes configuring data loss prevention strategies and ensuring data integrity across endpoints.
Topic 2	<ul style="list-style-type: none">Harmony Endpoint Management as a Service: This section targets Harmony Endpoint Security Professionals, focusing on managing endpoint security as a service. It covers the cloud-based management capabilities of Harmony Endpoint, allowing for scalable deployment and policy management.
Topic 3	<ul style="list-style-type: none">Introduction to Harmony Endpoint: This section measures the skills of CheckPoint Security Administrators about the fundamental concepts of Harmony Endpoint. It introduces candidates to the capabilities of the Harmony Endpoint solution, which is designed to protect endpoint devices from various cyber threats.
Topic 4	<ul style="list-style-type: none">Harmony Endpoint Security Management: This section focuses on the skills of Harmony Endpoint Security Professionals and covers the management aspects of Harmony Endpoint Security. It emphasizes how to effectively configure and manage security policies across endpoint devices.

Quiz Pass-Sure 156-536 - Test Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) Book

So many candidates have encountered difficulties in preparing to pass the 156-536 exam. But our study materials will help

candidates to pass the exam easily. Our 156-536 guide questions can provide statistics report function to help the learners to find weak links and deal with them. The 156-536 Test Torrent boost the function of timing and simulating the exam. They set the timer to simulate the exam and help the learners adjust the speed and keep alert. So the 156-536 guide questions are very convenient for the learners to master and pass the exam.

CheckPoint Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) Sample Questions (Q33-Q38):

NEW QUESTION # 33

What is the default encryption algorithm in the Full Disk Encryption tab under Advanced Settings?

- A. AES-CBC 128 bit
- B. AES-CBC 256 bit
- C. XTS-AES 128 bit
- **D. XTS-AES 256 bit**

Answer: D

Explanation:

The default encryption algorithm for Full Disk Encryption (FDE) in Check Point Harmony Endpoint, as configured in the Advanced Settings tab, is XTS-AES 256 bit. This is explicitly stated in the CP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf on page 221, under the "Custom Disk Encryption Settings" section:

"The default encryption algorithm is XTS-AES 256 bit."

This extract confirms that Option C is correct. The document further notes that administrators can choose between XTS-AES 256 bit and XTS-AES 128 bit, but 256 bit is the default, reflecting a preference for stronger encryption. XTS (XEX-based tweaked-codebook mode with ciphertext stealing) is specifically designed for disk encryption, providing better security than CBC (Cipher Block Chaining) modes.

* Option A ("AES-CBC 128 bit") and Option B ("AES-CBC 256 bit") are incorrect because FDE uses XTS mode, not CBC, which is less suited for disk encryption due to its vulnerabilities in this context.

* Option D ("XTS-AES 128 bit") is a configurable option but not the default, as the guide specifies 256 bit as the standard setting.

References:

CP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf, Page 221: "Custom Disk Encryption Settings" (confirms XTS-AES 256 bit as the default algorithm).

NEW QUESTION # 34

Endpoint Security Clients are applications installed on company-owned desktop and laptop computers which include the following:

- A. GUI client that connects to the Endpoint Security Management Server to manage the policy and other configuration for Endpoints
- B. GUI client that connects to the local Endpoint Capability Software to manage the policy and all other configuration for that Endpoint only
- C. Endpoint Security software Capabilities and a GUI client to manage policies for all capabilities
- **D. Endpoint security software Capabilities and a device agent which operates as a container for the Capabilities and communicates with the Endpoint Management Server**

Answer: D

Explanation:

Endpoint Security Clients are essential components of the Harmony Endpoint solution, installed on end-user devices such as desktops and laptops to provide security features and maintain communication with the centralized management infrastructure.

The CP_R81.20_Harmony_Endpoint_Server_AdminGuide.pdf clearly defines their composition and functionality.

On page 19, under the section "Endpoint Security Client," the document states:

"The Endpoint Security client is available on Windows and Mac. These are the Endpoint Security components that are available on Windows." This is followed by a table on page 20 listing components such as Compliance, Anti-Malware, Full Disk Encryption, and others, indicating that the client includes various security capabilities. However, the structural definition of the client is further clarified on page 24, under "Endpoint Security Clients":

"Application installed on end-user computers to monitor security status and enforce security policies." This description highlights that the client encompasses security software capabilities. Additionally, on page 27, under "Client to Server Communication," the guide elaborates:

"The client is always the initiator of the connections. Most communication is over HTTPS (TCP/443), including Policy downloads

and Heartbeat." This confirms that the client includes a device agent responsible for communication with the Endpoint Security Management Server, acting as a container for the security capabilities (e.g., Anti-Malware, Full Disk Encryption) and facilitating policy enforcement and status updates. Thus, Option A accurately captures this dual role: "Endpoint security software Capabilities" (the security components) and "a device agent" (the communication layer) that interacts with the server.

The other options do not align with the documentation:

* Option B: Describes a GUI client for management, which aligns more with SmartEndpoint (see page 24, item 3), not the Endpoint Security Client installed on end-user devices.

* Option C: Suggests a GUI within the client for managing policies, but policy management is centralized via SmartEndpoint or the Web Management Console, not the client itself (see page 19).

* Option D: Implies local policy management, which contradicts the centralized architecture where policies are downloaded from the server (see page 27).

NEW QUESTION # 35

Which of the following is not protected by the Full Disk Encryption (FDE) software?

- * Client's user data
 - * Operating system files
 - * Temporary files
 - * Erased files
-
- A. Erased files
 - B. Temporary files
 - C. All of these are protected with FDE
 - D. Temporary and erased files

Answer: C

NEW QUESTION # 36

The Push Operation Wizard allows users to select which three topics for Push Operations?

- A. Anti-Malware, Forensics and Remediation, Agent Settings
- B. Anti-Virus, Remediation, Agent Settings
- C. Anti-Ransomware, Forensics and Analysis, Agent Configurations
- D. Anti-Malware, Analysis, Agent Deployment

Answer: A

Explanation:

As detailed in the official Check Point Harmony Endpoint documentation, the Push Operation Wizard supports various push operations categorized specifically into Anti-Malware, Forensics and Remediation, and Agent Settings. These operations allow administrators to remotely manage security actions such as malware scans, forensic data collection, remediation tasks, and settings related to endpoint agents.

Exact Extract from Official Document:

"Push operations supported include Anti-Malware, Forensics and Remediation, and Agent Settings." Reference: Check Point Harmony Endpoint Specialist R81.20 Administration Guide.

NEW QUESTION # 37

Which of the following is not protected by the Full Disk Encryption (FDE) software?

Client's user data
Operating system files
Temporary files
Erased files

- A. Erased files

- B. Temporary files
- C. All of these are protected with FDE
- D. Temporary and erased files

Answer: A

NEW QUESTION # 38

.....

We can calculate that Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) (156-536) certification exam is the best way by which you can learn new applications, and tools and mark your name in the list of best employees in your company. You don't have to be dependent on anyone to support you in your professional life, but you have to prepare for GetValidTest real Check Point Certified Harmony Endpoint Specialist - R81.20 (CCES) (156-536) exam questions.
