## Valid Plat-Arch-201 Test Labs | Reliable Plat-Arch-201 Exam Materials

We hold coherent direction with our exam candidates, so our Plat-Arch-201 study materials are compiled in modern format. Many competitors simulate and strive to emulate our standard, but our Plat-Arch-201 training braindumps outstrip others in many aspects, so it is incumbent on us to offer help. Considering the current plea of our exam candidates we make up our mind to fight for your satisfaction and wish to pass the Plat-Arch-201 Exam.

## Salesforce Certified Platform Data Architect Sample Questions (Q41-Q46):

### NEW QUESTION # 41

A data architect has been tasked with optimizing a data stewardship engagement for a Salesforce instance Which three areas of Salesforce should the architect review before proposing any design recommendation? Choose 3 answer

- A. Export the setup audit trail to review what fields are being used.
- **B. Review the sharing model to determine impact on duplicate records.**
- C. Review the metadata xml files for redundant fields to consolidate.
- **D. Run key reports to determine what fields should be required.**
- **E. Determine if any integration points create records in Salesforce.**

**Answer: B,D,E**

Explanation:

Determining if any integration points create records in Salesforce, running key reports to determine what fields should be required, and reviewing the sharing model to determine impact on duplicate records are three areas of Salesforce that the architect should review before proposing any design recommendation. These areas will help to identify the sources and quality of data, the business rules and validations for data entry, and the access and visibility of data across users and roles. Reviewing the metadata xml files for

redundant fields to consolidate, and exporting the setup audit trail to review what fields are being used are not necessary steps for optimizing a data stewardship engagement, as they are more related to metadata management and audit tracking.

#### NEW QUESTION # 42

Universal Containers has provided a web order form for its customer and has noticed invalid data coming in on orders. What should be used to mitigate this problem?

- A. Work Flow Rules
- B. Apex Trigger
- C. Formatted Fields
- **D. Validation Rules**

**Answer: D**

Explanation:

Using validation rules to mitigate this problem is the best option. Validation rules can help you prevent invalid data from being entered in your web order form. You can use validation rules to check for data quality, format, range, or consistency. For example, you can use validation rules to ensure that the order quantity is positive, the product code is valid, or the shipping address is complete.

#### NEW QUESTION # 43

NTO has 1 million customer records spanning 25 years. As part of its new SF project, NTO would like to create a master data management strategy to help preserve the history and relevance of its customer data. Which 3 activities will be required to identify a successful master data management strategy? Choose 3 answer

- **A. Create a data archive strategy**
- B. Choose a Business Intelligence tool.
- **C. Identify data to be replicated**
- D. Install a data warehouse
- **E. Define the systems of record for critical data**

**Answer: A,C,E**

Explanation:

The three activities that will be required to identify a successful master data management strategy are:

Identify data to be replicated: This activity involves determining which data elements need to be copied from one system to another, and how frequently the replication should occur. This can help ensure data consistency and availability across systems.

Create a data archive strategy: This activity involves defining how historical data will be stored, accessed, and deleted over time. This can help optimize data storage, performance, and compliance.

Define the systems of record for critical data: This activity involves identifying which system owns and maintains the authoritative version of each data element. This can help avoid data conflicts and duplication across systems.

Install a data warehouse is not a required activity, but rather a possible option for consolidating data from multiple sources for analytics purposes. Choose a Business Intelligence tool is not a required activity, but rather a possible option for visualizing and reporting on data from various sources.

#### NEW QUESTION # 44

NTO has decided that it is going to build a channel sales portal with the following requirements:

1. External resellers are able to authenticate to the portal with a login.
2. Lead data, opportunity data and order data are available to authenticated users.
3. Authenticated users many need to run reports and dashboards.
4. There is no need for more than 10 custom objects or additional file storage.

Which community cloud license type should a data architect recommend to meet the portal requirements?

- A. Lightning external apps starter.
- B. Customer community.
- **C. Partner community.**
- D. Customer community plus.

**Answer: C**

Explanation:

Partner community license type is the best option for building a channel sales portal, as it allows external resellers to access lead, opportunity, and order data, as well as run reports and dashboards. Customer community and customer community plus license types are more suitable for customer service portals, while lightning external apps starter license type does not support reports and dashboards

#### NEW QUESTION # 45

Get Cloudy Consulting is migrating their legacy system's users and data to Salesforce. They will be creating 15,000 users, 1.5 million Account records, and 15 million Invoice records. The visibility of these records is controlled by a 50 owner and criteria-based sharing rules. Get Cloudy Consulting needs to minimize data loading time during this migration to a new organization.

Which two approaches will accomplish this goal? (Choose two.)

- A. Defer sharing calculations until the data has finished uploading.
- B. First, load all account records, and then load all user records.
- C. Contact Salesforce to activate indexing before uploading the data.
- D. Create the users, upload all data, and then deploy the sharing rules.

**Answer: A,D**

Explanation:

Creating the users, uploading all data, and then deploying the sharing rules will reduce the number of sharing recalculations that occur during the data load. Deferring sharing calculations until the data has finished uploading will also improve the performance by postponing the sharing rule evaluation. These are the recommended best practices for loading large data sets into Salesforce

#### NEW QUESTION # 46

.....

Success in acquiring the Plat-Arch-201 is seen to be crucial for your career growth. But preparing for the Salesforce Certified Platform Data Architect (Plat-Arch-201) exam in today's busy routine might be difficult. This is where actual Salesforce Plat-Arch-201 Exam Questions offered by VCE4Dumps come into play.
