FCP_FAZ_AN-7.6 Sample Questions Answers - New FCP_FAZ_AN-7.6 Test Simulator

The desktop FCP - FortiAnalyzer 7.6 Analyst (FCP_FAZ_AN-7.6) practice exam software helps its valued customer to be well aware of the pattern of the real FCP_FAZ_AN-7.6 exam. You can try a free FCP - FortiAnalyzer 7.6 Analyst (FCP_FAZ_AN-7.6) demo too. This FCP - FortiAnalyzer 7.6 Analyst (FCP_FAZ_AN-7.6) practice test is customizable and you can adjust its time and Fortinet PDF Questions. ValidTorrent helps you in doing self-assessment so that you reduce your chances of failure in the examination of FCP - FortiAnalyzer 7.6 Analyst (FCP_FAZ_AN-7.6) certification.

Fortinet FCP - FortiAnalyzer 7.6 Analyst Sample Questions (Q16-Q21):

NEW QUESTION # 16
What is the purpose of playbook trigger variables?

- A. To use information from the trigger to filter the action in a task

- B. To provide the trigger information to make the playbook start running
- C. To store the start the times of playbooks with On_Schedule triggers
- D. To display statistics about the playbook runtime

Answer: D

NEW QUESTION # 17

Refer to Exhibit. What does the data point at 21:20 indicate?

- A. FortiAnalyzer is temporarily buffering received logs so older logs can be indexed first.
- B. FortiAnalyzer is indexing logs faster than logs are being received.
- C. The SQL database requires a rebuild because of high receive lag.
- D. The fortilogd daemon is ahead in indexing by one log.

Answer: B

Explanation:
The exhibit shows a graph that tracks two metrics over time: Receive Rate and Insert Rate.
These two rates are crucial for understanding the log processing behavior in FortiAnalyzer.
Understanding Receive Rate and Insert Rate:
Receive Rate: This is the rate at which FortiAnalyzer is receiving logs from connected devices.
Insert Rate: This is the rate at which FortiAnalyzer is indexing (inserting) logs into its database for storage and analysis.
Data Point at 21:20:
At 21:20, the Insert Rate line is above the Receive Rate line, indicating that FortiAnalyzer is inserting logs into its database at a faster rate than it is receiving them. This situation suggests that FortiAnalyzer is able to keep up with the incoming logs and is possibly processing a backlog or temporarily received logs faster than new logs are coming in.

NEW QUESTION # 18

As part of your analysis, you discover that an incident is a false positive. You change the incident status to Closed: False Positive. Which statement about your update is true?

- A. The incident will be deleted.
- B. The audit history log will be updated.
- C. The incident number will be changed
- D. The corresponding event will be marked as mitigated.

Answer: B

Explanation:
When an incident in FortiAnalyzer is identified as a false positive and its status is updated to
"Closed:
False Positive," certain records and logs are updated to reflect this change.
Option A - The Audit History Log Will Be Updated:
FortiAnalyzer maintains an audit history log that records changes to incidents, including updates to their status. When an incident

status is marked as "Closed: False Positive," this action is logged in the audit history to ensure traceability of changes. This log provides accountability and a record of how incidents have been handled over time.

NEW QUESTION # 19
What is the purpose of playbook trigger variables?

- A. To provide the trigger information to make the playbook start running
- B. To display statistics about the playbook runtime
- C. To use information from the trigger to filter the action in a task
- D. To store the start the times of playbooks with On_Schedule triggers

Answer: C

NEW QUESTION # 20
Refer to Exhibit:

What does the data point at 21:20 indicate?

- A. FortiAnalyzer is temporarily buffering received logs so older logs can be indexed first.
- B. FortiAnalyzer is indexing logs faster than logs are being received.
- C. The SQL database requires a rebuild because of high receive lag.
- D. The fortilogd daemon is ahead in indexing by one log.

Answer: B

Explanation:
The exhibit shows a graph that tracks two metrics over time: Receive Rate and Insert Rate. These two rates are crucial for understanding the log processing behavior in FortiAnalyzer.
* Understanding Receive Rate and Insert Rate:
* Receive Rate: This is the rate at which FortiAnalyzer is receiving logs from connected devices.
* Insert Rate: This is the rate at which FortiAnalyzer is indexing (inserting) logs into its database for storage and analysis.
* Data Point at 21:20:
* At 21:20, the Insert Rate line is above the Receive Rate line, indicating that FortiAnalyzer is inserting logs into its database at a faster rate than it is receiving them. This situation suggests that FortiAnalyzer is able to keep up with the incoming logs and is possibly processing a backlog or temporarily received logs faster than new logs are coming in.
* Option Analysis:
* Option A - FortiAnalyzer is Indexing Logs Faster Than Logs are Being Received: This accurately describes the scenario at 21:20, where the Insert Rate exceeds the Receive Rate. This indicates that FortiAnalyzer is handling logs efficiently at that moment, with no backlog in processing.
* Option B - The fortilogd Daemon is Ahead in Indexing by One Log: The data does not provide specific information about the fortilogd daemon's log count, only the rates. This option is incorrect.

* Option C - SQL Database Requires a Rebuild: High receive lag would imply a backlog in receiving and indexing logs, typically visible if the Receive Rate were significantly above the Insert Rate, which is not the case here.
* Option D - FortiAnalyzer is Temporarily Buffering Logs to Index Older Logs First: There is no indication of buffering in this scenario. Buffering would usually occur if the Receive Rate were higher than the Insert Rate, indicating that FortiAnalyzer is storing logs temporarily due to indexing lag.
Conclusion:
* Correct Answer: A. FortiAnalyzer is indexing logs faster than logs are being received.
* The graph at 21:20 shows a higher Insert Rate than Receive Rate, indicating efficient log processing by FortiAnalyzer.
