ECCouncil Flexible 312-50v13 Learning Mode - Certified Ethical Hacker Exam (CEHv13) Realistic New Test Topics Pass Guaranteed Quiz

We promise that you can get through the challenge winning the 312-50v13 exam within a week. There is no life of bliss but bravely challenging yourself to do better. So there is no matter of course. Among a multitude of 312-50v13 practice materials in the market, you can find that our 312-50v13 Exam Questions are the best with its high-quality and get a whole package of help as well as the best quality 312-50v13 study materials from our services.

ECCouncil Certified Ethical Hacker Exam (CEHv13) Sample Questions (Q183-Q188):

NEW QUESTION # 183
What hacking attack is challenge/response authentication used to prevent?

- A. Scanning attacks
- B. Replay attacks
- C. Session hijacking attacks
- D. Password cracking attacks

Answer: B

Explanation:
Challenge/response authentication is designed to prevent replay attacks. In this mechanism:
The server sends a random "challenge" string.
The client uses its secret (like a password or private key) to generate a response.
The server verifies that the response matches what it expected for that challenge.
Since the challenge is random and changes each time, an attacker cannot simply capture and replay previous responses to gain unauthorized access.
From CEH v13 Courseware:
Module 11: Session Hijacking
Module 6: Authentication Protocols
CEH v13 Study Guide states:
"Challenge-response authentication prevents replay attacks by using dynamically generated nonces or challenge tokens that change with each session." Incorrect Options:
B: Scanning attacks are not related to authentication mechanisms.
C: Session hijacking involves active takeovers, not replaying login attempts.
D: Password cracking targets password hashes, not session tokens.

NEW QUESTION # 184
In order to tailor your tests during a web-application scan, you decide to determine which web-server version is hosting the application. On using the sV flag with Nmap. you obtain the following response:
80/tcp open http-proxy Apache Server 7.1.6
what Information-gathering technique does this best describe?

- A. Brute forcing
- B. Dictionary attack
- C. Banner grabbing
- D. WhOiS lookup

Answer: C

Explanation:
Banner grabbing is a technique wont to gain info about a computer system on a network and the services running on its open ports. administrators will use this to take inventory of the systems and services on their network. However, an to find will use banner grabbing so as to search out network hosts that are running versions of applications and operating systems with known exploits.
Some samples of service ports used for banner grabbing are those used by Hyper Text Transfer Protocol (HTTP), File Transfer Protocol (FTP), and Simple Mail Transfer Protocol (SMTP); ports 80, 21, and 25 severally. Tools normally used to perform banner grabbing are Telnet, nmap and Netcat.
For example, one may establish a connection to a target internet server using Netcat, then send an HTTP request. The response can usually contain info about the service running on the host:
This information may be used by an administrator to catalog this system, or by an intruder to narrow down a list of applicable exploits.
To prevent this, network administrators should restrict access to services on their networks and shut down unused or unnecessary services running on network hosts. Shodan is a search engine for banners grabbed from portscanning the Internet.

NEW QUESTION # 185
Emily, an extrovert obsessed with social media, posts a large amount of private information, photographs, and location tags of recently visited places. Realizing this. James, a professional hacker, targets Emily and her acquaintances, conducts a location search to detect their geolocation by using an automated tool, and gathers information to perform other sophisticated attacks. What is the tool employed by James in the above scenario?

- A. VisualRoute
- B. ophcrack
- C. HULK
- D. Hootsuite

Answer: D

Explanation:
Hootsuite may be a social media management platform that covers virtually each side of a social media manager's role.
With only one platform users area unit ready to do the easy stuff like reverend cool content and schedule posts on social media in all the high to managing team members and measure ROI.
There area unit many totally different plans to decide on from, from one user set up up to a bespoken enterprise account that's appropriate for much larger organizations.
Conducting location search on social media sites such as Twitter, Instagram, and Facebook helps attackers to detect the geolocation of the target. This information further helps attackers to perform various social engineering and non-technical attacks. Many online tools such as Followerwonk, Hootsuite, and Sysomos are available to search for both geotagged and non-geotagged information on social media sites. Attackers search social media sites using these online tools using keywords, usernames, date, time, and so on...

NEW QUESTION # 186
A bank stores and processes sensitive privacy information related to home loans. However, auditing has never been enabled on the system. What is the first step that the bank should take before enabling the audit feature?

- A. Perform a vulnerability scan of the system.
- B. Perform a cost/benefit analysis of the audit feature.
- C. Determine the impact of enabling the audit feature.
- D. Allocate funds for staffing of audit log review.

Answer: C

NEW QUESTION # 187
Shellshock allowed an unauthorized user to gain access to a server. It affected many Internet-facing services, which OS did it not directly affect?

- A. Windows
- B. Unix
- C. OS X
- D. Linux

Answer: A

Explanation:
Shellshock (CVE-2014-6271) is a vulnerability in the GNU Bash (Bourne Again Shell) that allows remote code execution via crafted environment variables. It was disclosed in 2014 and had a wide impact on systems that relied on Bash as a command-line shell interpreter.
Affected systems include:
Linux distributions (Red Hat, Debian, CentOS, Ubuntu, etc.)
Unix variants (e.g., FreeBSD, OpenBSD, etc.)
Apple macOS (formerly OS X), since it uses Bash as the default shell
Windows systems were not directly affected because they do not use Bash by default. Bash is not a native component of Windows operating systems, and Shellshock exploits Bash-specific behavior. Only Windows systems where Bash was manually installed through a third-party method or environment (e.g., Cygwin) might be susceptible - but by default, Windows systems are immune.
Incorrect options:
A). Linux - Affected
B). Unix - Affected
C). OS X - Affected
D). Windows - Not directly affected (Correct answer)
