

# ARA-C01 Reliable Test Vce - Cheap ARA-C01 Dumps

P.S. Free & New ARA-C01 dumps are available on Google Drive shared by TestPDF: [https://drive.google.com/open?id=1h\\_bdbOMyYkitXX1SU6AGTUWSVuSeG0xt](https://drive.google.com/open?id=1h_bdbOMyYkitXX1SU6AGTUWSVuSeG0xt)

When candidates decide to pass the ARA-C01 exam, the first thing that comes to mind is to look for a study material to prepare for their exam. The most people will consider that choose ARA-C01 question torrent, because it has now provided thousands of online test papers for the majority of test takers to perform simulation exercises, helped tens of thousands of candidates pass the ARA-C01 Exam, and got their own dream industry certificates. ARA-C01 exam prep has an extensive coverage of test subjects, a large volume of test questions, and an online update program.

Doubtlessly, clearing the ARA-C01 certification exam is a challenging task. You can make this task considerably easier by studying with actual SnowPro Advanced Architect Certification (ARA-C01) Questions of TestPDF. We provide you with a triple-formatted ARA-C01 Practice Test material, made under the supervision of experts. This product has everything you need to clear the challenging ARA-C01 exam in one go.

## Cheap ARA-C01 Dumps | Reliable ARA-C01 Test Question

There are plenty of platforms that have been offering SnowPro Advanced Architect Certification ARA-C01 exam practice questions. You have to be vigilant and choose the reliable and trusted platform for SnowPro Advanced Architect Certification ARA-C01 exam preparation and the best platform is TestPDF. On this platform, you will get the valid, updated, and SnowPro Advanced Architect Certification exam expert-verified exam questions. SnowPro Advanced Architect Certification Questions are real and error-free questions that will surely repeat in the upcoming SnowPro Advanced Architect Certification exam and you can easily pass the final SnowPro Advanced Architect Certification ARA-C01 Exam even with good scores.

## Snowflake SnowPro Advanced Architect Certification Sample Questions (Q12-Q17):

### NEW QUESTION # 12

A Snowflake Architect is designing an application and tenancy strategy for an organization where strong legal isolation rules as well as multi-tenancy are requirements.

Which approach will meet these requirements if Role-Based Access Policies (RBAC) is a viable option for isolating tenants?

- **A. Create accounts for each tenant in the Snowflake organization.**
- B. Create a multi-tenant table strategy if row level security is not viable for isolating tenants.
- C. Create an object for each tenant strategy if row level security is not viable for isolating tenants.
- D. Create an object for each tenant strategy if row level security is viable for isolating tenants.

**Answer: A**

### NEW QUESTION # 13

A table `contacts_data` contains a VARIANT column with nested JSON data. Which queries correctly retrieve the first name value "Snow"? (Select TWO).

- A. `SELECT o[customer][name][first]::STRING FROM contacts_data;`
- **B. `SELECT o:customer.name.first::STRING FROM contacts_data;`**
- C. `SELECT o:['customer']['name']['first']::STRING FROM contacts_data;`
- D. `SELECT o:Customer.Name.First::STRING FROM contacts_data;`
- **E. `SELECT o['customer']['name']['first']::STRING FROM contacts_data;`**

**Answer: B,E**

Explanation:

Snowflake supports multiple syntaxes for accessing elements in VARIANT columns. Bracket notation with quoted keys is valid for object traversal, making option B correct. Dot notation with colon syntax is also valid and commonly used for readability, as shown in option E.

Option A is invalid because unquoted identifiers inside brackets are interpreted as column names, not JSON keys. Option C contains incorrect syntax combining brackets and colons. Option D is invalid because JSON key names are case-sensitive unless quoted, and the provided structure uses lowercase keys.

Understanding VARIANT traversal syntax is a core SnowPro Architect skill for semi-structured data handling and transformation.

---

### NEW QUESTION # 14

How can the Snowpipe REST API be used to keep a log of data load history?

- **A. Call `loadHistoryScan` every 10 minutes for a 15-minute time range.**
- B. Call `loadHistoryScan` every minute for the maximum time range.
- C. Call `insertReport` every 8 minutes for a 10-minute time range.
- D. Call `insertReport` every 20 minutes, fetching the last 10,000 entries.

**Answer: A**

Explanation:

Snowpipe is a service that automates and optimizes the loading of data from external stages into Snowflake tables. Snowpipe uses a queue to ingest files as they become available in the stage. Snowpipe also provides REST endpoints to load data and retrieve load history reports<sup>1</sup>.

The `loadHistoryScan` endpoint returns the history of files that have been ingested by Snowpipe within a specified time range. The endpoint accepts the following parameters<sup>2</sup>:

`pipe`: The fully-qualified name of the pipe to query.

`startTimeInclusive`: The start of the time range to query, in ISO 8601 format. The value must be within the past 14 days.

`endTimeExclusive`: The end of the time range to query, in ISO 8601 format. The value must be later than the start time and within the past 14 days.

`recentFirst`: A boolean flag that indicates whether to return the most recent files first or last. The default value is false, which means the oldest files are returned first.

`showSkippedFiles`: A boolean flag that indicates whether to include files that were skipped by Snowpipe in the response. The default value is false, which means only files that were loaded are returned.

The `loadHistoryScan` endpoint can be used to keep a log of data load history by calling it periodically with a suitable time range. The best option among the choices is D, which is to call `loadHistoryScan` every 10 minutes for a 15-minute time range. This option ensures that the endpoint is called frequently enough to capture the latest files that have been ingested, and that the time range is wide enough to avoid missing any files that may have been delayed or retried by Snowpipe. The other options are either too infrequent,

too narrow, or use the wrong endpoint<sup>3</sup>.

### NEW QUESTION # 15

Which command do you run to remove files from stage?

- A. DELETE
- B. REMOVE
- C. PURGE
- D. CLEAN

**Answer: B**

### NEW QUESTION # 16

A healthcare company is deploying a Snowflake account that may include Personal Health Information (PHI).

The company must ensure compliance with all relevant privacy standards.

Which best practice recommendations will meet data protection and compliance requirements? (Choose three.)

- A. Rewrite SQL queries to eliminate projections of PHI data based on `current_role()`.
- B. Avoid sharing data with partner organizations.
- C. Create Dynamic Data Masking policies and apply them to columns that contain PHI.
- D. Use the External Tokenization feature to obfuscate sensitive data.
- E. Use, at minimum, the Business Critical edition of Snowflake.
- F. Use the Internal Tokenization feature to obfuscate sensitive data.

**Answer: C,D,E**

Explanation:

A healthcare company that handles PHI data must ensure compliance with relevant privacy standards, such as HIPAA, HITRUST, and GDPR. Snowflake provides several features and best practices to help customers meet their data protection and compliance requirements<sup>1</sup>.

One best practice recommendation is to use, at minimum, the Business Critical edition of Snowflake. This edition provides the highest level of data protection and security, including end-to-end encryption with customer-managed keys, enhanced object-level security, and HIPAA and HITRUST compliance<sup>2</sup>. Therefore, option A is correct.

Another best practice recommendation is to create Dynamic Data Masking policies and apply them to columns that contain PHI. Dynamic Data Masking is a feature that allows masking or redacting sensitive data based on the current user's role. This way, only authorized users can view the unmasked data, while others will see masked values, such as NULL, asterisks, or random characters<sup>3</sup>. Therefore, option B is correct.

A third best practice recommendation is to use the External Tokenization feature to obfuscate sensitive data.

External Tokenization is a feature that allows replacing sensitive data with tokens that are generated and stored by an external service, such as Protegrity. This way, the original data is never stored or processed by Snowflake, and only authorized users can access the tokenized data through the external service<sup>4</sup>. Therefore, option D is correct.

Option C is incorrect, because the Internal Tokenization feature is not available in Snowflake. Snowflake does not provide any native tokenization functionality, but only supports integration with external tokenization services<sup>4</sup>.

Option E is incorrect, because rewriting SQL queries to eliminate projections of PHI data based on `current_role()` is not a best practice. This approach is error-prone, inefficient, and hard to maintain. A better alternative is to use Dynamic Data Masking policies, which can automatically mask data based on the user's role without modifying the queries<sup>3</sup>.

Option F is incorrect, because avoiding sharing data with partner organizations is not a best practice.

Snowflake enables secure and governed data sharing with internal and external consumers, such as business units, customers, or partners. Data sharing does not involve copying or moving data, but only granting access privileges to the shared objects. Data sharing can also leverage Dynamic Data Masking and External Tokenization features to protect sensitive data<sup>5</sup>.

Snowflake's Security & Compliance Reports : Snowflake Editions : Dynamic Data Masking : External Tokenization : Secure Data Sharing

## NEW QUESTION # 17

.....

After using our ARA-C01 learning materials, you will find that things that have been difficult before have become simple. Of course, that's because you are better. Opportunities are for those who are prepared. And our ARA-C01 exam questions are the right tool to help you get prepared. With the most up-to-date knowledge and information of the ARA-C01 Practice Braindumps, you can be capable to deal with all of the conditions in your job. Believe it, good people will be better!

**Cheap ARA-C01 Dumps:** <https://www.testpdf.com/ARA-C01-exam-braindumps.html>

In order to help people pass the exam and gain the certification, we are glad to the ARA-C01 study materials from our company for you, It explains why our ARA-C01 practice materials helped over 98 percent of exam candidates get the certificate you dream of successfully, Snowflake ARA-C01 Reliable Test Vce The clients abroad only need to fill in correct mails and then they get our products conveniently, ARA-C01 candidates will get the payment back if failed the ARA-C01 exam with TestPDF ARA-C01 exam PDF and exam VCE.

Change the Style of Tables in Pages Documents, We believe that it must be very useful for you to take your exam, and it is necessary for you to use our ARA-C01 Test Questions.

In order to help people pass the exam and gain the certification, we are glad to the ARA-C01 study materials from our company for you, It explains why our ARA-C01 practice materials helped over 98 percent of exam candidates get the certificate you dream of successfully.

## ARA-C01 – 100% Free Reliable Test Vce | Useful Cheap SnowPro Advanced Architect Certification Dumps

The clients abroad only need to fill in correct mails and then they get our products conveniently, ARA-C01 candidates will get the payment back if failed the ARA-C01 exam with TestPDF ARA-C01 exam PDF and exam VCE.

You can believe in our SnowPro Advanced Architect Certification ARA-C01 free prep guide for we 100% guarantee you pass the actual exam.
