Topic 6	<ul style="list-style-type: none"><li>Transportation Planning: The sub-topics here include network setup, profile configuration, and VSR optimizer calibration for automatic planning, all essential for efficient transportation planning.</li></ul>

## SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management Sample Questions (Q60-Q65):

### NEW QUESTION # 60

You want to use advanced shipping and receiving. What must you define? Note: There are 2 correct answers to this question.

- A. Location with type 1011 (vendor)
- B. Location with type 1001 (production plant)
- C. Location with type 1003 (shipping point)
- D. Location with type 1200 (loading point)

**Answer: A,C**

Explanation:

Advanced shipping and receiving (ASR) in SAP S/4HANA Transportation Management integrates transportation management with warehouse management processes, requiring specific location types to be defined. According to the SAP documentation:

\* Location with type 1011 (vendor) (A) is required to represent the external supplier or vendor locations involved in the transportation process.

\* Location with type 1003 (shipping point) (B) is necessary to define the point from which goods are shipped, typically linked to a plant or warehouse.

The other options are incorrect:

\* Location with type 1200 (loading point) (C) is not a standard location type in SAP S/4HANA TM for advanced shipping and receiving; loading points are managed differently.

\* Location with type 1001 (production plant) (D) is used for manufacturing processes but is not specifically required for ASR unless it also serves as a shipping point.

### NEW QUESTION # 61

For which of the following documents is it possible to do forward and backward scheduling in the transportation cockpit?

- A. Freight unit
- B. Forwarding order
- **C. Freight order**
- D. Sales order

**Answer: C**

Explanation:

In SAP S/4HANA Transportation Management, forward and backward scheduling in the transportation cockpit is supported for the freight order (A). According to the SAP documentation, freight orders, which represent the execution of transportation, allow planners to perform forward scheduling (calculating end dates based on start dates) and backward scheduling (calculating start dates based on required delivery dates) to optimize transport timelines. This functionality is available in the transportation cockpit to ensure alignment with transportation requirements and constraints.

The other options are incorrect:

- \* Forwarding order (B) is used for logistics service provider scenarios and does not typically support forward and backward scheduling in the transportation cockpit.
- \* Sales order (C) originates in sales and distribution and is not directly scheduled in the transportation cockpit.
- \* Freight unit (D) represents goods for planning but does not support scheduling at this level.

Reference:

SAP S/4HANA Cloud Private Edition, Transportation Management Study Guide: Unit 1 - Transportation Management Overview and Fundamentals, Section on Scheduling in Transportation Cockpit.

SAP Help Portal: Transportation Management - Scheduling in Freight Orders () .

### NEW QUESTION # 62

In a side-by-side deployment between SAP S/4HANA and transportation management in SAP S/4HANA, which interface is used to transfer business partner, product, and location master data?

- A. Intermediate document (IDoc)
- B. Core interface (CIF)
- C. Web service (WS)
- **D. Data replication framework (DRF)**

**Answer: D**

Explanation:

In a side-by-side deployment between SAP S/4HANA and SAP S/4HANA Transportation Management, master data such as business partners, products, and locations are transferred using the Data Replication Framework (DRF) (A). According to the SAP documentation, DRF is the standard interface for replicating master data between SAP S/4HANA systems in a side-by-side scenario, ensuring consistency and synchronization of data like business partners, materials, and locations.

The other options are incorrect:

- \* Core interface (CIF) (B) is used in SAP APO and SAP SCM, not in SAP S/4HANA TM side-by-side deployments.
- \* Intermediate document (IDoc) (C) may be used for transactional data but is not the primary interface for master data replication.
- \* Web service (WS) (D) is used for specific integrations but not for standard master data replication in this scenario.

Reference:

SAP S/4HANA Cloud Private Edition, Transportation Management Study Guide: Unit 1 - Transportation Management Overview and Fundamentals, Section on Master Data Integration.

SAP Help Portal: Transportation Management - Data Replication Framework () .

### NEW QUESTION # 63

You want to ensure that the system interprets rates from a rate table as percentages. Where do you have to set the percentage indicator? Note: There are 2 correct answers to this question.

- **A. Rate table**
- B. Calculation profile
- **C. Calculation sheet**
- D. Scale

**Answer: A,C**

#### **NEW QUESTION # 64**

What evolving accordingly and now includes several mobile-friendly elements?

Please choose the correct answer.

- A. SAP EC
- B. SAP MD
- **C. SAP TM**
- D. SAP PM

**Answer: C**

#### **NEW QUESTION # 65**

.....
