

Pass Guaranteed Databricks - Databricks-Certified-Data-Engineer-Associate - Accurate Databricks Certified Data Engineer Associate Exam Valid Test Duration

Now, let us show you why our Databricks-Certified-Data-Engineer-Associate exam questions are absolutely your good option. First of all, in accordance to the fast-pace changes of bank market, we follow the trend and provide the latest version of Databricks-Certified-Data-Engineer-Associate study materials to make sure you learn more knowledge. Secondly, since our Databricks-Certified-Data-Engineer-Associate training quiz appeared on the market, seldom do we have the cases of customer information disclosure. We really do a great job in this career!

Databricks Certified Data Engineer Associate certification exam is a rigorous assessment of a candidate's knowledge and skills in various areas of data engineering. Databricks-Certified-Data-Engineer-Associate Exam covers topics such as data ingestion, data transformation, data storage, data processing, and data analysis. Candidates must demonstrate proficiency in working with various Databricks tools, including Delta Lake, Spark SQL, and Apache Spark.

The GAQM Databricks-Certified-Data-Engineer-Associate (Databricks Certified Data Engineer Associate) Exam is a certification that is designed to test the skills and knowledge of data engineers who work with Databricks. Data engineers play a critical role in any organization that relies on data to make decisions. They are responsible for the design, construction, and maintenance of data pipelines, data models, and data warehouses.

Databricks-Certified-Data-Engineer-Associate exam is a vendor-neutral certification, meaning that it is not tied to any specific technology or platform. This makes it a highly versatile qualification that can be applied to a range of different roles and industries. It is also recognized globally, making it a valuable asset for data engineers looking to work in different countries or regions.

Databricks Databricks-Certified-Data-Engineer-Associate Valid Exam Book, Databricks-Certified-Data-Engineer-Associate Valid Exam Review

Now Databricks Databricks-Certified-Data-Engineer-Associate is a hot certification exam in the IT industry, and a lot of IT professionals all want to get Databricks Databricks-Certified-Data-Engineer-Associate certification. So Databricks certification Databricks-Certified-Data-Engineer-Associate exam is also a very popular IT certification exam. Databricks Databricks-Certified-Data-Engineer-Associate certificate is very helpful to your work in the IT industry, which can help promote your position and salary a lot and let your life have more security.

Databricks Certified Data Engineer Associate Exam Sample Questions (Q68-Q73):

NEW QUESTION # 68

Which of the following benefits of using the Databricks Lakehouse Platform is provided by Delta Lake?

- A. The ability to manipulate the same data using a variety of languages

- B. The ability to set up alerts for query failures
- **C. The ability to support batch and streaming workloads**
- D. The ability to distribute complex data operations
- E. The ability to collaborate in real time on a single notebook

Answer: C

Explanation:

Delta Lake is the optimized storage layer that provides the foundation for storing data and tables in the Databricks lakehouse. Delta Lake is fully compatible with Apache Spark APIs, and was developed for tight integration with Structured Streaming, allowing you to easily use a single copy of data for both batch and streaming operations and providing incremental processing at scale¹. Delta Lake supports upserts using the merge operation, which enables you to efficiently update existing data or insert new data into your Delta tables². Delta Lake also provides time travel capabilities, which allow you to query previous versions of your data or roll back to a specific point in time³. References: 1: What is Delta Lake? | Databricks on AWS 2: Upsert into a table using merge | Databricks on AWS 3: [Query an older snapshot of a table (time travel) | Databricks on AWS] Learn more

NEW QUESTION # 69

A data engineer has left the organization. The data team needs to transfer ownership of the data engineer's Delta tables to a new data engineer. The new data engineer is the lead engineer on the data team.

Assuming the original data engineer no longer has access, which of the following individuals must be the one to transfer ownership of the Delta tables in Data Explorer?

- **A. Workspace administrator**
- B. Databricks account representative
- C. Original data engineer
- D. This transfer is not possible
- E. New lead data engineer

Answer: A

Explanation:

NEW QUESTION # 70

Which of the following data workloads will utilize a Gold table as its source?

- A. A job that enriches data by parsing its timestamps into a human-readable format
- **B. A job that queries aggregated data designed to feed into a dashboard**
- C. A job that aggregates uncleaned data to create standard summary statistics
- D. A job that cleans data by removing malformed records
- E. A job that ingests raw data from a streaming source into the Lakehouse

Answer: B

NEW QUESTION # 71

A dataset has been defined using Delta Live Tables and includes an expectations clause:

CONSTRAINT valid_timestamp EXPECT (timestamp > '2020-01-01') ON VIOLATION DROP ROW What is the expected behavior when a batch of data containing data that violates these constraints is processed?

- A. Records that violate the expectation are added to the target dataset and recorded as invalid in the event log.
- B. Records that violate the expectation are dropped from the target dataset and loaded into a quarantine table.
- C. Records that violate the expectation are added to the target dataset and flagged as invalid in a field added to the target dataset.
- **D. Records that violate the expectation are dropped from the target dataset and recorded as invalid in the event log.**
- E. Records that violate the expectation cause the job to fail.

Answer: D

Explanation:

Explanation

With the defined constraint and expectation clause, when a batch of data is processed, any records that violate the expectation (in this case, where the timestamp is not greater than '2020-01-01') will be dropped from the target dataset. These dropped records will also be recorded as invalid in the event log, allowing for auditing and tracking of the data quality issues without causing the entire job to fail.

<https://docs.databricks.com/en/delta-live-tables/expectations.html>

NEW QUESTION # 72

Which of the following commands can be used to write data into a Delta table while avoiding the writing of duplicate records?

- A. APPEND
- B. INSERT
- C. DROP
- D. IGNORE
- E. MERGE

Answer: E

Explanation:

The MERGE command can be used to upsert data from a source table, view, or DataFrame into a target Delta table. It allows you to specify conditions for matching and updating existing records, and inserting new records when no match is found. This way, you can avoid writing duplicate records into a Delta table¹. The other commands (DROP, IGNORE, APPEND, INSERT) do not have this functionality and may result in duplicate records or data loss²³⁴. References: 1: Upsert into a Delta Lake table using merge | Databricks on AWS 2: SQL DELETE | Databricks on AWS 3: SQL INSERT INTO | Databricks on AWS 4: SQL UPDATE | Databricks on AWS

NEW QUESTION # 73

.....

To make this task easier for you, Databricks provides you with the most reliable and concise practice material, to pass the Databricks Databricks-Certified-Data-Engineer-Associate in the first go. We make sure that a more confident and well-prepared student enters the Databricks Databricks-Certified-Data-Engineer-Associate. This is a convenient and manageable e-book format that contains actual Databricks Databricks-Certified-Data-Engineer-Associate questions.
