HPE7-A02 Pass-Sure Materials: Aruba Certified Network Security Professional Exam - HPE7-A02 Actual Test & HPE7-A02 Test Torrent

Are you staying up for the HPE7-A02 exam day and night? Do you have no free time to contact with your friends and families because of preparing for the exam? Are you tired of preparing for different kinds of exams? If your answer is yes, please buy our HPE7-A02 Exam Questions, which is equipped with a high quality. We can make sure that our products have the ability to help you pass the exam and get the according HPE7-A02 certification.

HP Aruba Certified Network Security Professional Exam Sample Questions (Q113-Q118):

NEW QUESTION # 113
You have installed an HPE Aruba Networking Network Analytic Engine (NAE) script on an AOS-CX switch to monitor a particular function.
Which additional step must you complete to start the monitoring?

- A. Enable NAE, which is disabled by default.
- B. Edit the script to define monitor parameters.
- C. Create an agent from the script.
- D. Reboot the switch.

Answer: C

Explanation:
After installing an HPE Aruba Networking Network Analytic Engine (NAE) script on an AOS-CX switch, the additional step required to start the monitoring is to create an agent from the script. The agent is responsible for executing the script and collecting the monitoring data as defined by the script parameters.
1.Script Installation: Installing the script provides the logic and parameters for monitoring.
2.Agent Creation: Creating an agent from the script activates the monitoring process, allowing the NAE to begin tracking the specified function.
3.Operational Step: This step ensures that the monitoring logic is applied and the data collection starts as per the script's configuration.

NEW QUESTION # 114
A company is implementing HPE Aruba Networking Wireless IDS/IPS (WIDS/WIPS) on its AOS-10 APs, which are managed in HPE Aruba Networking Central.
What is one requirement for enabling detection of rogue APs?

- A. Each VLAN in the network assigned on at least one AP's or AM's port
- B. A Foundation with Security license for each of the APs
- C. A manual radio profile that enables non-regulatory channels
- D. One AM deployed for every one AP deployed

Answer: B

Explanation:
To enable the detection of rogue APs with HPE Aruba Networking Wireless IDS/IPS (WIDS/WIPS) on AOS-10 APs managed in HPE Aruba Networking Central, each AP must have a Foundation with Security license. This license enables advanced security features, including rogue AP detection, which is crucial for maintaining a secure wireless environment and protecting against unauthorized access points.

NEW QUESTION # 115
A company wants to apply a standard configuration to all AOS-CX switch ports and have the ports dynamically adjust their configuration based on the identity of the user or device that connects. They want to centralize configuration of the identity-based settings as much as possible.
What should you recommend?

- A. Having switches download user-roles from HPE Aruba Networking gateways
- B. Having switches download user-roles from HPE Aruba Networking ClearPass Policy Manager (CPPM)
- C. Having HPE Aruba Networking ClearPass Policy Manager (CPPM) send standard RADIUS AVPs to customize port settings

- D. Having switches pull port configurations dynamically from HPE Aruba Networking Activate

Answer: B

Explanation:
For a company that wants to apply a standard configuration to all AOS-CX switch ports and dynamically adjust their configuration based on the identity of the user or device that connects, the best approach is to have the switches download user-roles from HPE Aruba Networking ClearPass Policy Manager (CPPM). This method centralizes the configuration of identity-based settings in CPPM, allowing it to dynamically assign roles and policies to switch ports based on authentication and authorization results. This ensures consistent and secure network access control tailored to each user or device.

NEW QUESTION # 116
A company lacks visibility into the many different types of user and loT devices deployed in its internal network, making it hard for the security team to address those devices.
Which HPE Aruba Networking solution should you recommend to resolve this issue?

- A. HPE Aruba Networking Network Analytics Engine (NAE)
- B. HPE Aruba Networking Mobility Conductor
- C. HPE Aruba Networking ClearPass Device Insight (CPDI)
- D. HPE Aruba Networking ClearPass OnBoard

Answer: C

Explanation:
For a company that lacks visibility into various types of user and IoT devices on its internal network, HPE Aruba Networking ClearPass Device Insight (CPDI) is the recommended solution. CPDI provides comprehensive visibility and profiling of all devices connected to the network. It uses machine learning and AI to identify and classify devices, offering detailed insights into their behavior and characteristics. This enhanced visibility enables the security team to effectively monitor and manage network devices, improving overall network security and compliance.
Reference: Aruba's documentation on ClearPass Device Insight outlines its capabilities in device discovery, profiling, and security posture assessment, making it ideal for environments with diverse and numerous network-connected devices.

NEW QUESTION # 117
You manage AOS-10 APs with HPE Aruba Networking Central. A role is configured on these APs with these rules (in order):
* Allow UDP on port 67 to any destination
* Allow any to network 10.1.4.0/23
* Deny any to network 10.1.0.0/18 + log
* Deny any to network 10.0.0.0/8
* Allow any to any destination
You add this new rule immediately before rule 4:
* Deny SSH to network 10.1.0.0/21 + denylist
After this change, what happens when a client assigned to this role sends SSH traffic to 10.1.7.12?

- A. The traffic is dropped, and the client is denylisted
- B. The traffic is dropped (without any logging or further action against the client)
- C. The traffic is dropped and logged
- D. The traffic is permitted

Answer: C

Explanation:
Aruba firewall / role access rules are evaluated top-down, first-match wins; once a rule matches, no later rules are processed.
Let's walk the packet through the ordered rules:
* The traffic is SSH, not UDP/67 # rule 1 does not match.
* Destination 10.1.7.12 is not in 10.1.4.0/23 # rule 2 does not match.
* 10.1.7.12 is in 10.1.0.0/18 # rule 3 matches first.
* Rule 3 action: Deny any to 10.1.0.0/18 + log.
* Because rule 3 already matched, the later "Deny SSH to 10.1.0.0/21 + denylist" rule is never evaluated, so no denylist is applied.
Aruba documentation for session ACLs and firewall rules explicitly states that rules are evaluated from top to bottom and "the first

match terminates further evaluation," and logging/denylist flags on a rule are applied only when that specific rule matches.
So the outcome is: the SSH traffic is dropped and logged, but the client is not denylisted # Option B.

NEW QUESTION # 118
......

The Aruba Certified Network Security Professional Exam (HPE7-A02) exam questions are the real, valid, and updated HPE7-A02 Exam Questions that are specifically designed for quick and complete HPE7-A02 exam preparation. With Exams-boost Aruba Certified Network Security Professional Exam (HPE7-A02) practice test questions you can start HP HPE7-A02 exam preparation immediately.
