With our Identity-and-Access-Management-Architect exam questions, you will not only get aid to gain your dreaming certification, but also you can enjoy the first-class service online.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q65-Q70):

NEW QUESTION # 65

A multinational industrial products manufacturer is planning to implement Salesforce CRM to manage their business. They have the

following requirements:

1. They plan to implement Partner communities to provide access to their partner network .
2. They have operations in multiple countries and are planning to implement multiple Salesforce orgs.
3. Some of their partners do business in multiple countries and will need information from multiple Salesforce communities.
4. They would like to provide a single login for their partners.

How should an Identity Architect solution this requirement with limited custom development?

- A. Allow partners to choose the Salesforce org they need information from and use login flows to authenticate access.
- B. Consolidate Partner related information in a single org and provide access through Salesforce community.
- C. Register partners in one org and access information from other orgs using APIs.
- **D. Create a partner login for the country of their operation and use SAML federation to provide access to other orgs.**

Answer: D

Explanation:

Explanation

SAML federation allows partners to log in to multiple Salesforce orgs with a single identity provider. The partner login can be created for the country of their operation and then federated to other orgs using SAML assertions. References: SAML Single Sign-On Overview, Federated Authentication Using SAML

NEW QUESTION # 66

Universal containers (UC) uses an internal company portal for their employees to collaborate. UC decides to use Salesforce ideas and provide the ability for employees to post ideas from the company portal. They use SAML-BASED SSO to get into the company portal and would like to leverage it to access Salesforce. Most of the users don't exist in Salesforce and they would like the user records created in Salesforce communities the first time they try to access Salesforce. What recommendation should an architect make to meet this requirement?

- A. Use on-the-fly provisioning
- **B. Use just-in-time provisioning**
- C. Use Identity connect to sync users
- D. Use Salesforce APIs to create users on the fly

Answer: B

Explanation:

Just-in-time provisioning is a feature that allows Salesforce to create user accounts automatically when users log in for the first time via an external identity provider. This way, UC can avoid creating user records manually or synchronizing them with another system. On-the-fly provisioning is not a valid term in Salesforce.

Salesforce APIs can be used to create users programmatically, but they are not related to SSO. Identity Connect is a tool that can sync users between Salesforce and Active Directory, but it is not required for SSO.

NEW QUESTION # 67

A consumer products company uses Salesforce to maintain consumer information, including orders. The company implemented a portal solution using Salesforce Experience Cloud for its consumers where the consumers can log in using their credentials. The company is considering allowing users to login with their Facebook or LinkedIn credentials.

Once enabled, what role will Salesforce play?

- A. Facebook and LinkedIn will act as the IdPs and SPs.
- **B. Salesforce will be the service provider (SP).**
- C. Salesforce will be the identity provider (IdP).
- D. Facebook and LinkedIn will be the SPs.

Answer: B

Explanation:

Explanation

To allow users to login with their Facebook or LinkedIn credentials, Salesforce will play the role of a service provider (SP). A SP is

an entity that relies on an identity provider (IdP) to authenticate and authorize users. In this scenario, Facebook and LinkedIn are the IdPs, and Salesforce is the SP. The SP receives a token from the IdP and uses it to access Salesforce resources. The other options are not correct for this scenario. References: Service Provider, Social Sign-On with Authentication Providers

NEW QUESTION # 68

IT security at Universal Containers (UC) is concerned about recent phishing scams targeting its users and wants to add additional layers of login protection. What should an Architect recommend to address the issue?

- A. Implement Single Sign-on using a corporate Identity store.
- **B. Use the Salesforce Authenticator mobile app with two-step verification**
- C. Increase Password complexity requirements in Salesforce.
- D. Lock sessions to the IP address from which they originated.

Answer: B

Explanation:

Explanation

The Salesforce Authenticator mobile app adds an extra layer of security for online accounts with two-factor authentication. It allows users to respond to push notifications or use location services to verify their logins and other account activity¹. This can help prevent phishing scams and unauthorized access.

References: Salesforce Authenticator, Salesforce Authenticator: Mobile App Security Features, Salesforce Authenticator

NEW QUESTION # 69

An identity architect is setting up an integration between Salesforce and a third-party system. The third-party system needs to authenticate to Salesforce and then make API calls against the REST API.

One of the requirements is that the solution needs to ensure the third party service providers connected app in Salesforce mini need for end user interaction and maximizes security.

Which OAuth flow should be used to fulfill the requirement?

- A. Web Server Flow
- B. User Agent Flow
- C. Username-Password Flow
- **D. JWT Bearer Flow**

Answer: D

Explanation:

JWT Bearer Flow allows the third-party system to authenticate to Salesforce using a digital certificate and a JSON Web Token (JWT) without any user interaction. It also provides a high level of security as it does not require sharing credentials or storing tokens. References: OAuth 2.0 JWT Bearer Token Flow
