

# SAP C\_S4CPB Valid Test Preparation - C\_S4CPB Study Guides

Itcertmaster would give you access to SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) (C\_S4CPB) exam questions that are factual and unambiguous, as well as information that is important for the preparation of the C\_S4CPB exam. You won't be anxious because the available SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) (C\_S4CPB) exam dumps are structured instead of distributed. SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) (C\_S4CPB) certification exam candidates have specific requirements and anticipate a certain level of satisfaction before buying a SAP C\_S4CPB practice exam. The SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) (C\_S4CPB) practice exam applicants can rest assured that Itcertmaster's round-the-clock support staff will answer their questions.

The price for SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) C\_S4CPB study materials is quite reasonable, and no matter you are a student or you are an employee, you can afford the expense. Besides, SAP C\_S4CPB exam materials are compiled by skilled professionals, therefore quality can be guaranteed. C\_S4CPB Study Materials cover most knowledge points for the exam, and you can learn lots of professional knowledge in the process of training.

>> SAP C\_S4CPB Valid Test Preparation <<

## C\_S4CPB Study Guides, C\_S4CPB Exams Torrent

In this way, the SAP C\_S4CPB certified professionals can not only validate their skills and knowledge level but also put their careers on the right track. By doing this you can achieve your career objectives. To avail of all these benefits you need to pass the SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) (C\_S4CPB) exam which is a difficult exam that demands firm commitment and complete SAP C\_S4CPB exam questions preparation.

## SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) Sample Questions (Q16-Q21):

### NEW QUESTION # 16

#### SIMULATION

Create a Custom Launchpad Space and Page  
Business Scenario

You are building a custom business role that will be assigned to all employees in the organization. The business role and its corresponding Launchpad Space and Page need to include the apps that have been granted through the business catalogs assigned to the business role to ensure employees have an easy time finding the relevant applications.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task

Create a new business role (not from a template) with the information below.

□

## Answer:

Explanation:

See Explanation below for all solution

Explanation:

Task 8: Create a New Business Role (Not from a Template)

Objective

The purpose of this task is to create a new custom business role for all employees in the organization. This role is intended to become the base role that will later be connected to the required business catalogs, launchpad space, and page so that employees can easily access the relevant apps.

This task explicitly says:

create a new business role

not from a template

use the exact values provided in the task

Business Scenario Explanation

You are building a role for all employees in the organization.

Unlike the earlier project-manager role, this one is not derived from a standard SAP template.

The purpose of this role is to provide a shared employee-level launchpad structure.

Later, the role will be used to:

assign business catalogs,

create a launchpad space,

create a launchpad page,

place apps on the page for employee self-service access.

In this step, the focus is only on creating the new business role with the correct identification and access category settings.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the values exactly as shown.

Do not create this role from a template.

The access categories must be set exactly as required:

Unrestricted for all categories

Save the role at the end.

Required Values

Use the following values exactly as shown in the task screenshot

□ Step 1: Open the app "Maintain Business Roles"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search.

Search for:

Maintain Business Roles

Open the app.

Explanation:

This app is used to create, maintain, copy, derive, and restrict business roles.

Since this task requires creating a brand new custom role, this is the correct place to start.

Step 2: Start creating a new business role

Inside Maintain Business Roles:

Click New

Explanation:

This task explicitly says to create a role not from a template.

So you must use New, not:

Create From Template

Create Derived Business Role

Copy

Using New creates a completely customer-defined business role.

Step 3: Enter the business role ID

In the new business role creation screen:

In Business Role ID, enter:

Z\_EMPLOYEES\_ALL\_#####

Example

For suffix 000013:

Z\_EMPLOYEES\_ALL\_000013

Explanation:

This is the technical identifier of the new business role.  
It must match the task exactly for validation to succeed.

Step 4: Enter the business role description

In Business Role Description, enter:

All Employee Role #####

Example

For suffix 000013:

All Employee Role 000013

Explanation:

This is the readable description shown in SAP and should exactly match the exercise requirement.

Step 5: Set access categories

In the Access Categories section, set all categories to:

Write, Read, Value Help = Unrestricted

Read, Value Help = Unrestricted

Value Help = Unrestricted

Explanation:

The task explicitly says:

Access Categories: Unrestricted for all categories

So all three category dropdowns must be left or set to Unrestricted.

This means:

the role is not restricted by country, company code, or other field-level limitation in this step, this role is intended to be broadly reusable for all employees.

Step 6: Review the role before saving

Before saving, verify:

Business Role ID is correct

Business Role Description is correct

all 3 access category values are Unrestricted

Explanation:

This avoids common mistakes such as:

wrong suffix,

extra spaces,

restricted instead of unrestricted values,

creating from template accidentally.

Step 7: Save the role

Click:

Save

Explanation:

This finalizes the new business role.

Without saving, the role remains only in draft and is not actually created.

Step 8: Verify the role after save

After saving, confirm that the role is displayed with:

Business Role ID = Z\_EMPLOYEES\_ALL\_#####

Business Role Description = All Employee Role #####

Write Access / Read Access / Value Help Access = Unrestricted

Explanation:

This is the confirmation that the role was created successfully and matches the task requirement.

Expected Result

After the task is completed successfully:

a new custom business role exists,

it was created not from a template,

the role ID and description match the required values,

all access categories are Unrestricted,

the role is saved and available for the next steps.

## NEW QUESTION # 17

### SIMULATION

Create a Business User and Assign a Business Role

Business Scenario

You are working on an implementation project and need to create a test user in the system for demonstrating the professional

services business processes to project managers during your upcoming Fit-to-Standard workshop. Follow the instructions below to create a new test user with a basic import of worker and work agreement data.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Assign the HR Administrator (BR\_ADMINISTRATOR\_HRINFO) business role to your user.

### Answer:

Explanation:

See Explanation below for all solution

Explanation:

Task 3: Assign the HR Administrator Business Role to Your User

Objective

The purpose of this task is to assign the HR Administrator business role to your own business user so you can continue the worker, work agreement, and business user setup activities required for the professional services scenario.

The required business role is:

Business Role ID: BR\_ADMINISTRATOR\_HRINFO

Business Role Description: Administrator - HR Info

Task 3: Assign the HR Administrator Business Role to Your User

Objective

The purpose of this task is to assign the HR Administrator business role to your own business user so you can continue the worker, work agreement, and business user setup activities required for the professional services scenario.

The required business role is:

Business Role ID: BR\_ADMINISTRATOR\_HRINFO

Business Role Description: Administrator - HR Info

Step 1: Open the app "Maintain Business Users"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search or launchpad search.

Search for:

Maintain Business Users

Open the app.

Explanation:

This app is used to maintain user master data and assign business roles.

All business role assignments for your own user are done here.

Step 2: Search for your own user

In Maintain Business Users:

In the filter/search area, enter your own user name or user ID.

Click Go.

Explanation:

You need to open your own user because the HR Administrator role must be assigned to your own account before continuing the simulation.

Step 3: Open your user record

After the search results appear:

Click your own user in the result list.

Open the detail page.

Explanation:

This opens the business user detail screen where all assigned roles can be reviewed and maintained.

Step 4: Switch to Edit mode

On the user detail page:

Click Edit.

Explanation:

Edit mode is required before you can add or remove business roles.

Without edit mode, the Assigned Business Roles tab is display-only.

Step 5: Open the "Assigned Business Roles" tab

Inside your user record:

Click the tab:

Assigned Business Roles

Explanation:

This tab lists all current roles assigned to your user and is the correct place to add BR\_ADMINISTRATOR\_HRINFO.

Step 6: Click "Add"

In the Assigned Business Roles section:

Click Add

This opens the dialog:

Add Business Roles

Explanation:

This popup allows you to search for standard SAP business roles by ID or description.

Step 7: Search for the HR Administrator role

In the Add Business Roles popup:

In Business Role ID, enter:

BR\_ADMINISTRATOR\_HRINFO

Click Go

Select the role:

Administrator - HR Info

Business Role ID: BR\_ADMINISTRATOR\_HRINFO

Explanation:

This is the exact role required by the task.

It gives you the workforce / HR information administration permissions needed for the later simulation steps.

Step 8: Add the role to the user

After selecting the role:

Click OK or Apply

The role should now appear in your assigned roles list.

Explanation:

At this stage, the role is added to the user in draft mode, but it is not yet permanently stored until you save.

Step 9: Save the business user

Back on the business user detail page:

Click Save

Explanation:

Saving is mandatory.

If you do not save, the role assignment remains incomplete and later tasks may fail because your user will not actually have the HR Administrator authorization.

Step 10: Verify the role assignment

After saving, verify that the role appears in the assigned roles list:

BR\_ADMINISTRATOR\_HRINFO

Administrator - HR Info

Explanation:

This is your proof that the task is complete.

You should see the HR role together with your other assigned roles.

Expected Result

After completing this task successfully:

your user has the HR Administrator role assigned,

the role appears in Assigned Business Roles,

the user is saved successfully,

later worker/business-user creation steps can be performed.

Why this role matters

The role BR\_ADMINISTRATOR\_HRINFO is required because the scenario involves:

worker information,

work agreement information,

user creation for workshop demonstration,

HR-related administration steps.

In SAP S/4HANA Cloud, access is always role-based, so assigning this role is an authorization prerequisite for later tasks.

## NEW QUESTION # 18

### SIMULATION

Business Scenario You are working on an implementation project and need to create a test user in the system for demonstrating the professional services business processes to project managers during your upcoming Fit-to-Standard workshop. Follow the instructions below to create a new test user with a basic import of worker and work agreement data.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Create a new business user with the following information by importing the new user's data:

Import Name: Project Manager Test User #####

### Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a test user in SAP S/4HANA Cloud for demonstrating professional services business processes to project managers during a Fit-to-Standard workshop.

This task is completed by importing:

worker data

work agreement data

The import must use the exact values provided in the task.

Business Scenario Explanation

In this scenario, you need a test user that represents a Project Manager.

This user is needed so that project-management-related professional services processes can later be demonstrated in the system.

Instead of creating every record manually, SAP asks you to use the import process.

This is faster and also ensures the worker and agreement data are loaded in the correct structure.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the values exactly as provided.

Do not change spaces, punctuation, or capitalization unless the task explicitly tells you to.

A wrong value, extra space, or missing number can cause task validation failure.

If your suffix is 000013, then the values become:

Worker ID = 1000013

User Name = PM000013

First Name = Project

Last Name = Manager 000013

Email = PM000013@dummy.sap.com

Step 1: Open the app used for importing users/workers

From the SAP S/4HANA Cloud launchpad:

Log in to the system.

Open the relevant import app used in your simulation for importing worker and work agreement data.

Start creation of a new import.

Explanation:

This task is not done by manual user creation only.

The scenario specifically says to create the new business user by importing the new user's data.

The import will load the basic worker and work agreement records that are required before the business user is fully usable.

Step 2: Enter the import name

When creating the import:

In the field Import Name, enter:

Project Manager Test User #####

Replace ##### with your own 6-digit group suffix.

Example

For suffix 000013, enter:

Project Manager Test User 000013

Explanation:

The import name identifies your import package and should be entered exactly as required by the task.

Step 3: Prepare the worker data

In the worker import structure, enter these values:

Worker ID = 1#####

User Name = PM#####

Worker Type = BUP003

First Name = Project

Last Name = Manager #####  
Email = PM#####@dummy.sap.com  
Language = EN  
Company Code = 1010  
Cost Center = 10101501  
Example for 000013  
Worker ID = 1000013  
User Name = PM000013  
Last Name = Manager 000013  
Email = PM000013@dummy.sap.com

Explanation:

These values define the person as a project manager test worker and connect the worker to:  
the company code,  
the cost center,  
the default language,  
and the worker type required by the scenario.

Step 4: Prepare the work agreement data

In the work agreement import structure, enter:

Start Date = today's date in YYYYMMDD format

End Date = 99991231

Example

If today's date is March 30, 2026:

Start Date = 20260330

End Date = 99991231

Explanation:

The end date 99991231 is used to indicate an open-ended validity.

This is common in SAP for a record that should remain valid indefinitely.

Step 5: Upload or enter the import data

Depending on the app behavior in your exercise:

Upload the prepared import file or

Enter the values into the import structure manually if the system provides inline entry.

Explanation:

The business scenario says the business user must be created by importing worker and work agreement data.

This means the relevant master data must be loaded into the system first before the user is fully available.

Step 6: Start the import

After all values are entered:

Validate the data if the system provides a validation option.

Start the import.

Explanation:

Validation checks whether:

required fields are filled,

date formats are correct,

codes like BUP003, 1010, and 10101501 are valid,

and the import structure is complete.

Step 7: Wait for the import to complete

Monitor the import process.

Wait until the import shows success or completed status.

Explanation:

Only after the import is complete will the worker and work agreement records exist in the system and be usable for further user setup and role assignment.

Step 8: Verify the imported worker/business user

After the import finishes:

Open the relevant business user / worker maintenance app.

Search using:

Worker ID

or User Name

Confirm that the imported user exists.

Explanation:

This step ensures the imported data was actually created and is available for later process demonstrations.

Expected Result

After the import is completed successfully:

a new test worker/user exists in the system,  
the worker has the required professional-services identity,  
the work agreement is valid,  
the user can be used in later project manager demonstrations.

## NEW QUESTION # 19

### SIMULATION

**Business Scenario** You are working on an implementation project and need to create a test user in the system for demonstrating the professional services business processes to project managers during your upcoming Fit-to-Standard workshop. Follow the instructions below to create a new test user with a basic import of worker and work agreement data.

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task.

Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Assign the Project Manager - Professional Services (BR\_PROJECT\_MANAGER\_PROF) business role to the new user and save.

### Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to assign the Project Manager - Professional Services business role to the newly created test user so that the user can perform the professional-services processes required during the Fit-to-Standard workshop.

The required business role is:

Business Role ID: BR\_PROJECT\_MANAGER\_PROF

Business Role Description: Project Manager - Professional Services

Business Scenario Explanation

In the previous task, a new test user was created for demonstrating professional services processes.

That new user now needs the correct project-manager authorization.

Without this business role, the test user will not have access to the project-manager apps, pages, and processes needed for the workshop demonstration.

This task connects the newly created user to the standard professional-services project manager role.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values as required.

The business role ID must be:

BR\_PROJECT\_MANAGER\_PROF

Do not use a similar role or partial match.

Save at the end, otherwise the assignment remains incomplete.

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Users"

From the SAP S/4HANA Cloud launchpad:

Log in to the system.

Use the app search.

Search for:

Maintain Business Users

Open the app.

Explanation:

This app is used to maintain business users and assign business roles.

Since the new user was created in the previous task, this is the correct app to assign the new role.

Step 2: Search for the newly created Project Manager test user

In Maintain Business Users:

In the filter/search area, enter the user name of the new test user.

The required user name format is:

PM#####

Example

If your group number suffix is 0000457, then search for:

PM0000457

Click Go.

Explanation:

You must open the newly created project manager test user, not your own user.

The role assignment in this task belongs to the imported test user created in Task 4.

Step 3: Open the new business user record

From the search results:

Click the user entry with:

User Name = PM#####

Open the detail page.

Explanation:

This opens the worker/business user record where the Project Manager role will be assigned.

Step 4: Verify that you are on the correct user

Before editing, confirm the business user details are correct.

Typical expected values are:

User Name = PM#####

First Name = Project

Last Name = Manager #####

E-Mail = PM#####@dummy.sap.com

Explanation:

This check is important because assigning the role to the wrong user would cause the simulation validation to fail.

Step 5: Switch to Edit mode

On the business user detail page:

Click Edit

Explanation:

Edit mode is required so the role list can be changed.

Step 6: Open the "Assigned Business Roles" tab

Inside the business user record:

Click the tab:

Assigned Business Roles

Explanation:

This tab shows all roles currently assigned to the new test user and is the correct place to add the project manager role.

Step 7: Click Add

In the Assigned Business Roles section:

Click Add

The system opens the popup:

Add Business Roles

Explanation:

This popup is used to search and add standard SAP-delivered business roles to the user.

Step 8: Search for the Project Manager role

In the Add Business Roles popup:

In the filter field for business role ID, enter:

BR\_PROJECT\_MANAGER\_PROF

Click Go

Select:

Project Manager - Professional Services

Business Role ID: BR\_PROJECT\_MANAGER\_PROF

Explanation:

This is the exact standard business role required by the task.

It provides the professional-services project manager access for the test user.

Step 9: Add the role

After selecting the role:

Click OK or Apply

Explanation:

At this point, the role is added to the user in draft mode, but the change is not yet final until saved.

Step 10: Save the business user

Back on the user detail page:

Click Save

Explanation:

This is the final required step.

If you do not save, the role assignment will not be stored and the task will not be completed successfully.

Step 11: Verify the assignment

After saving, confirm that the user now has the role:

Project Manager - Professional Services

BR\_PROJECT\_MANAGER\_PROF

Explanation:

This confirms that the new test user is now properly prepared for later professional-services process demonstrations.

Expected Result

After the task is completed:

the new test user PM##### exists,

the role BR\_PROJECT\_MANAGER\_PROF is assigned,

the user is saved successfully,

the user can later be used as a professional-services project manager in the workshop scenario.

## NEW QUESTION # 20

### SIMULATION

#### Business Scenario

You are working on an implementation project and need to assign yourself the Administrator business role to complete your job tasks. Follow the instructions below to assign the Administrator business role to your user.

Prerequisites Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Your Task 1.

Assign the Administrator (BR\_ADMINISTRATOR) business role to your user and save.

#### Answer:

Explanation:

See Explanation below for all solution

Explanation:

Task 1: Assign the Administrator Business Role to Your User

Objective

The purpose of this task is to assign the standard SAP business role Administrator to your own business user so you can perform the required configuration and administration activities in SAP S/4HANA Cloud.

The required business role is:

Business Role ID: BR\_ADMINISTRATOR

Business Role Description: Administrator

For your exercise, you must always replace ##### with the last 6 digits of your group number. In your case, this was done with your own group suffix during execution.

Why this task is required

In SAP S/4HANA Cloud, access to apps and functions is controlled through business roles.

Without the Administrator role, your user may not be able to:

open administration apps,

maintain configuration-related master data,

assign other roles,

proceed with later project tasks.

So this task is the first access-enablement step.

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Users"

From the SAP S/4HANA Cloud launchpad:

Log in to the system

Use the search bar or app finder.

Search for:

Maintain Business Users

Open the app.

This app is used to maintain business users and assign or remove business roles.

Step 2: Search for your own user

Inside Maintain Business Users:

In the search/filter area, locate the field for User Name or search criteria.

Enter your own user ID.

Click Go.

For example, in your exercise you used your own SAP Learning user.

You must open your own business user because the Administrator role needs to be assigned to your personal user record.

Step 3: Open your user record

After the search results appear:

Click your user entry in the list.

Open the user details screen.

This takes you to the detailed maintenance page where business roles can be reviewed and assigned.

Step 4: Switch to Edit mode

In the business user detail screen:

Click Edit.

Without entering edit mode, the role assignment list is display-only and cannot be changed.

Step 5: Go to Assigned Business Roles

Inside your business user:

Open the tab:

Assigned Business Roles

Review the currently assigned roles.

This tab shows all business roles already assigned to your user and is the correct place to add new ones.

Step 6: Click Add

In the Assigned Business Roles section:

Click Add.

This opens the dialog:

Add Business Roles

The Add dialog is used to search and select standard SAP-delivered business roles.

Step 7: Search for the Administrator role

In the Add Business Roles popup:

In the field Business Role ID, enter:

BR\_ADMINISTRATOR

Click Go.

Select the role:

Administrator

Business Role ID: BR\_ADMINISTRATOR

This is the standard Administrator role required by the task.

You must select the exact standard role, not a custom role.

Step 8: Add the role

After selecting BR\_ADMINISTRATOR:

Click OK or Apply, depending on the popup behavior.

Confirm that the role is added to the list of assigned business roles.

At this point the role is added to your draft changes, but not yet finally saved.

Step 9: Save the user

Back in the business user detail screen:

Click Save.

This is the final and mandatory step.

If you do not save, the Administrator role remains only in draft and is not actually assigned.

Step 10: Verify the assignment

After saving:

Check the Assigned Business Roles list.

Confirm that the Administrator role appears in the list:

BR\_ADMINISTRATOR

Expected Result:

Your user now has the Administrator business role assigned successfully.

What to verify after completion

You should verify the following:

Your user record is saved successfully.

The role Administrator is visible in the assigned roles list.

No draft remains unsaved.

Later administration apps are available to your user.
