

시험대비에 가장 적합한 DP-600 공부자료 덤프 공부

아직도 Microsoft 인증 DP-600 시험 준비를 어떻게 해야 할지 망설이고 계시나요? 고객님의 IT 인증 시험 준비길에는 언제나 Fast2test가 곁을 지켜주고 있습니다. Fast2test 시험 공부 자료를 선택하시면 자격증 취득의 소원이 이루어집니다. Microsoft 인증 DP-600 시험 덤프는 Fast2test가 최고의 선택입니다.

Microsoft DP-600 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> Prepare data: This section of the exam measures the skills of engineers and covers essential data preparation tasks. It includes establishing data connections and discovering sources through tools like the OneLake data hub and the real-time hub. Candidates must demonstrate knowledge of selecting the appropriate storage type—lakehouse, warehouse, or eventhouse—depending on the use case. It also includes implementing OneLake integrations with Eventhouse and semantic models. The transformation part involves creating views, stored procedures, and functions, as well as enriching, merging, denormalizing, and aggregating data. Engineers are also expected to handle data quality issues like duplicates, missing values, and nulls, along with converting data types and filtering. Furthermore, querying and analyzing data using tools like SQL, KQL, and the Visual Query Editor is tested in this domain.
주제 2	<ul style="list-style-type: none"> Maintain a data analytics solution: This section of the exam measures the skills of administrators and covers tasks related to enforcing security and managing the Power BI environment. It involves setting up access controls at both workspace and item levels, ensuring appropriate permissions for users and groups. Row-level, column-level, object-level, and file-level access controls are also included, alongside the application of sensitivity labels to classify data securely. This section also tests the ability to endorse Power BI items for organizational use and oversee the complete development lifecycle of analytics assets by configuring version control, managing Power BI Desktop projects, setting up deployment pipelines, assessing downstream impacts from various data assets, and handling semantic model deployments using XMLA endpoint. Reusable asset management is also a part of this domain.
주제 3	<ul style="list-style-type: none"> Implement and manage semantic models: This section of the exam measures the skills of architects and focuses on designing and optimizing semantic models to support enterprise-scale analytics. It evaluates understanding of storage modes and implementing star schemas and complex relationships, such as bridge tables and many-to-many joins. Architects must write DAX-based calculations using variables, iterators, and filtering techniques. The use of calculation groups, dynamic format strings, and field parameters is included. The section also includes configuring large semantic models and designing composite models. For optimization, candidates are expected to improve report visual and DAX performance, configure Direct Lake behaviors, and implement incremental refresh strategies effectively.

최신 Microsoft Certified DP-600 무료 샘플문제 (Q66-Q71):

질문 # 66

You need to recommend a solution to prepare the tenant for the PoC.

Which two actions should you recommend performing from the Fabric Admin portal? Each correct answer presents part of the solution.

NOTE: Each correct answer is worth one point.

- A. Enable the Allow Azure Active Directory guest users to access Microsoft Fabric option for specific security groups.
- B. Enable the Users can try Microsoft Fabric paid features option for specific security groups.
- C. Enable the Users can try Microsoft Fabric paid features option for the entire organization.
- D. Enable the Users can create Fabric items option and exclude specific security groups.
- E. Enable the Users can create Fabric items option for specific security groups.

정답: B,E

설명:

The PoC is planned to be completed using a Fabric trial capacity, which implies that users involved in the PoC should be able to try paid features. However, this should be limited to specific security groups involved in the PoC to prevent the entire organization from accessing these features before the trial is proven successful (A). The ability for users to create Fabric items should also be enabled for specific security groups to ensure that only the relevant team members participating in the PoC can create items in the Fabric environment (E).

질문 # 67

You have a Fabric tenant that contains a Microsoft Power BI report named Report 1. Report 1 includes a Python visual. Data displayed by the visual is grouped automatically and duplicate rows are NOT displayed. You need all rows to appear in the visual. What should you do?

- A. Modify the Summarize By property for all columns.
- B. Reference the columns in the Python code by index.
- C. Modify the Sort Column By property for all columns.
- D. Add a unique field to each row.

정답: B

설명:

To ensure all rows appear in the Python visual within a Power BI report, option C, adding a unique field to each row, is the correct solution. This will prevent automatic grouping by unique values and allow for all instances of data to be represented in the visual.

Reference = For more on Power BI Python visuals and how they handle data, please refer to the Power BI documentation.

Topic 2, Contoso, ltd.

Overview

Contoso, ltd. is a US-based health supplements company, Contoso has two divisions named Sales and Research. The Sales division contains two departments named Online Sales and Retail Sales. The Research division assigns internally developed product lines to individual teams of researchers and analysts.

Identity Environment

Contoso has a Microsoft Entra tenant named contoso.com. The tenant contains two groups named ResearchReviewersGroup1 and ReseachReviewefsGfoup2.

Data Environment

Contoso has the following data environment

* The Sales division uses a Microsoft Power BI Premium capacity.

* The semantic model of the Online Sales department includes a fact table named Orders that uses import mode. In the system of origin, the OrderID value represents the sequence in which orders are created.

* The Research department uses an on-premises, third-party data warehousing product.

* Fabric is enabled for contoso.com.

* An Azure Data Lake Storage Gen2 storage account named storage1 contains Research division data for a product line named

Productline1. The data is in the delta format.

* A Data Lake Storage Gen2 storage account named storage2 contains Research division data for a product line named Productline2. The data is in the CSV format.

Planned Changes

Contoso plans to make the following changes:

- * Enable support for Fabric in the Power BI Premium capacity used by the Sales division.
- * Make all the data for the Sales division and the Research division available in Fabric.
- * For the Research division, create two Fabric workspaces named Productline1ws and Productline2ws.
- * in Productline1ws, create a lakehouse named LakehouseV
- * In Lakehouse1, create a shortcut to storage1 named ResearchProduct.

Data Analytics Requirements

Contoso identifies the following data analytics requirements:

- * All the workspaces for the Sales division and the Research division must support all Fabric experiences.
- * The Research division workspaces must use a dedicated, on-demand capacity that has per-minute billing.
- * The Research division workspaces must be grouped together logically to support OneLake data hub filtering based on the department name.
- * For the Research division workspaces, the members of ResearchReviewersGroup1 must be able to read lakehouse and warehouse data and shortcuts by using SQL endpoints.
- * For the Research division workspaces, the members of ResearchReviewersGroup2 must be able to read lakehouse data by using Lakehouse explorer.
- * All the semantic models and reports for the Research division must use version control that supports branching Data Preparation Requirements Contoso identifies the following data preparation requirements:
- * The Research division data for Productline2 must be retrieved from Lakehouse1 by using Fabric notebooks.
- * All the Research division data in the lakehouses must be presented as managed tables in Lakehouse explorer.

Semantic Model Requirements

Contoso identifies the following requirements for implementing and managing semantic models;

- * The number of rows added to the Orders table during refreshes must be minimized.
- * The semantic models in the Research division workspaces must use Direct Lake mode.

General Requirements

Contoso identifies the following high-level requirements that must be considered for all solutions:

- * Follow the principle of least privilege when applicable
- * Minimize implementation and maintenance effort when possible.

질문 # 68

You have a Fabric tenant that contains a lakehouse named lakehouse1. Lakehouse1 contains an unpartitioned table named Table1.

You plan to copy data to Table1 and partition the table based on a date column in the source data.

You create a Copy activity to copy the data to Table1.

You need to specify the partition column in the Destination settings of the Copy activity.

What should you do first?

- A. From the Destination tab, set Mode to Overwrite.
- B. From the Destination tab, set Mode to Append.
- C. From the Source tab, select Enable partition discovery
- **D. From the Destination tab, select the partition column,**

정답: D

설명:

Before specifying the partition column in the Destination settings of the Copy activity, you should set Mode to Append (A). This will allow the Copy activity to add data to the table while taking the partition column into account. References = The configuration options for Copy activities and partitioning in Azure Data Factory, which are applicable to Fabric dataflows, are outlined in the official Azure Data Factory documentation.

질문 # 69

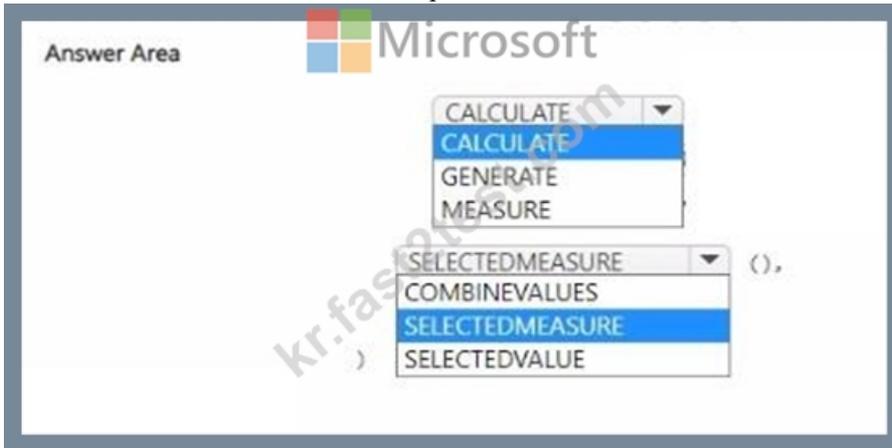

You have a Microsoft Power BI semantic model.

You plan to implement calculation groups.

You need to create a calculation item that will change the context from the selected date to month-to-date (MTD).

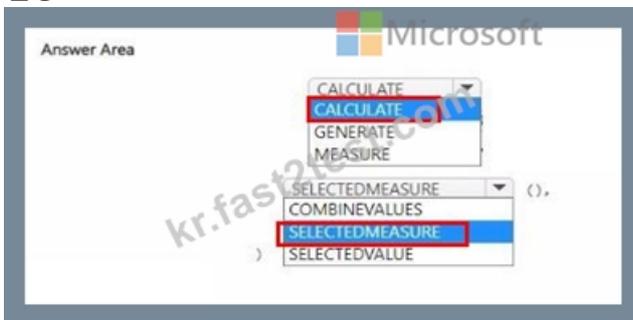

How should you complete the DAX expression? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

정답:

설명:

질문 # 70

You have a Fabric tenant that uses a Microsoft tower BI Premium capacity. You need to enable scale-out for a semantic model. What should you do first?

- A. At the tenant level, set Data Activator to Enabled.
- B. At the tenant level, set Create and use Metrics to Enabled.
- C. At the semantic model level, set Large dataset storage format to On.
- D. At the semantic model level, set Large dataset storage format to Off.

정답: C

설명:

To enable scale-out for a semantic model, you should first set Large dataset storage format to On (C) at the semantic model level. This configuration is necessary to handle larger datasets effectively in a scaled-out environment. References = Guidance on configuring large dataset storage formats for scale-out is available in the Power BI documentation.
