

Microsoft Valid GH-100 Exam Vce: GitHub Administration - TorrentValid Providers you Best Pass Guaranteed

What's more, part of that TorrentValid GH-100 dumps now are free: https://drive.google.com/open?id=1Nv32U5jLA80fu716tWRMmPzqYJX_TsPL

TorrentValid is a wonderful study platform that can transform your effective diligence in to your best rewards. By years of diligent work, our experts have collected the frequent-tested knowledge into our GH-100 exam materials for your reference. So our practice materials are triumph of their endeavor. By resorting to our GH-100 Exam Materials, we can absolutely reap more than you have imagined before. We have clear data collected from customers who chose our GH-100 practice materials, and the passing rate is 98-100 percent.

Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.
Topic 2	<ul style="list-style-type: none"> Describe how GitHub is deployed, distributed, and licensed: This section of the exam measures skills of GitHub Enterprise Administrators and highlights the deployment models of GitHub Enterprise Server, Enterprise Cloud, and GitHub AE. It covers licensing structures, billing for seat licenses and metered services, support options, and monitoring license usage across users and machine accounts.
Topic 3	<ul style="list-style-type: none"> Manage access and permissions based on membership: This section of the exam measures skills of DevOps Engineers and reviews how to manage organizations, teams, and repository permissions. It includes default permission settings, team synchronization through AD, scripting across multiple organizations, and aligning enterprise policies with trust requirements. It also contrasts roles such as organization members, owners, collaborators, and billing managers.
Topic 4	<ul style="list-style-type: none"> Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.

Topic 5	<ul style="list-style-type: none">• Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI• CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.

GH-100 Pass Guaranteed | Study GH-100 Center

The goal of GH-100 preparation material is to help applicants prepare for the GitHub Administration certification exam by providing them with the Actual GH-100 Exam Questions they need to pass the exam. This GitHub Administration (GH-100) study material is in the form of practice tests and GH-100 PDF that thoroughly covers the content of the test.

Microsoft GitHub Administration Sample Questions (Q64-Q69):

NEW QUESTION # 64

Why would a GitHub App be favored over a machine account for automation tasks?

- A. Machine accounts are required for webhook delivery.
- B. GitHub Apps provide a higher rate limit ceiling than using a personal access token on a machine account, when they use an install token and are owned by a GitHub Enterprise Cloud licensed enterprise.
- C. Machine accounts are easier to audit than GitHub Apps.
- D. GitHub Apps are limited to a single repository.

Answer: B

Explanation:

GitHub Apps authenticate with short-lived installation tokens scoped to fine-grained permissions and, when owned by a GitHub Enterprise Cloud organization, enjoy a higher rate limit (15,000 requests/hour) compared to a machine account's personal access token.

NEW QUESTION # 65

Your enterprise has multiple organizations, and you want to ensure consistent security policies across all teams. Which feature should you use?

- A. Enterprise-level teams with inherited enterprise policies.
- B. Outside collaborators for all repositories.
- C. Organization-specific teams with custom policies.
- D. Assigning admin permissions to all team members.

Answer: A

Explanation:

By using enterprise-level teams with inherited enterprise policies, you can group members across all your organizations and enforce the same security settings globally - ensuring every team abides by the enterprise's mandatory policies.

NEW QUESTION # 66

When comparing a partner identity provider integration with a non-partner identity management solution for GitHub Enterprise Managed Users, which statement is Correct?

- A. The non-partner identity provider integrations can utilize OIDC for authentication.
- B. The partner identity provider integrations support fewer GitHub-supported authentication methods.
- C. The partner identity provider integrations rely on the partner to support the application on the partner IdP.

- **D. The non-partner identity provider integrations require manual configuration of SAML 2.0 details.**

Answer: D

Explanation:

Non-partner identity provider integrations require you to enter SAML2.0 configuration details by hand - such as the Sign-on URL, Issuer, and X.509 certificate - whereas partner IdPs supply a pre-configured application integration.

NEW QUESTION # 67

Which GitHub feature is responsible for tracking dependencies and known vulnerabilities in those dependencies from an advisory database?

- A. CodeQL
- B. Repository Insights
- C. Security Policy
- **D. Dependency Graph**

Answer: D

Explanation:

The Dependency Graph continuously analyzes your repository's manifest and lock files to build an inventory of direct and transitive dependencies and flags any that match entries in the GitHub Advisory Database, surfacing known vulnerabilities.

NEW QUESTION # 68

How is CodeQL different from other static analysis tools?

- A. It removes insecure code automatically
- B. It runs analysis only after a security breach.
- C. It only works for open-source projects.
- **D. It allows querying of code semantics using a database-like language.**

Answer: D

Explanation:

CodeQL differs from traditional static analysis tools by ingesting your code into a queryable database and letting you write QL queries - its own database-style language - to express semantic checks and find patterns across the codebase.

NEW QUESTION # 69

.....

This age changes quickly, so we can't be passively, we should be actively to follow the age. When you choose to participate in GH-100 exam, you are proved to be an active person who wants better development opportunities for yourself. Our TorrentValid is willing to help those active people like you to achieve their goals. The most comprehensive and Latest GH-100 Exam Materials provided by us can meet all your need to prepare for GH-100 exam.
