If moving up in the fast-paced technological world is your objective, Actual4Cert is here to help. The excellent WGU Cybersecurity-Architecture-and-Engineering practice exam from Actual4Cert can help you realize your goal of passing the WGU Cybersecurity-Architecture-and-Engineering Certification Exam on your very first attempt. Most people find it difficult to find excellent WGU Cybersecurity-Architecture-and-Engineering exam dumps that can help them prepare for the actual WGU Cybersecurity-Architecture-and-Engineering exam.

Professional ability is very important both for the students and for the in-service staff because it proves their practical ability in the area. Therefore choosing a certificate exam which boosts great values to attend is extremely important for them and the test Cybersecurity-Architecture-and-Engineering certification is one of them. Passing the test certification can prove your outstanding major ability in some area and if you want to pass the Cybersecurity-Architecture-and-Engineering test smoothly you'd better buy our Cybersecurity-Architecture-and-Engineering test guide. And our Cybersecurity-Architecture-and-Engineering exam questions boost the practice test software to test the clients' ability to answer the questions.

## Quiz 2026 WGU - Cybersecurity-Architecture-and-Engineering - Valid WGU Cybersecurity Architecture and Engineering (KFO1/D488) Exam Guide

Having a Cybersecurity-Architecture-and-Engineering certificate is a task that every newcomer rookie dreams about. With it, you can not only become the elite in the workplace in the eyes of leaders, but also get a quick promotion and a raise, and maybe you have the opportunity to move to a better business. Whether you are a student or an office worker, you can be satisfied here, and you will never regret if you choose Cybersecurity-Architecture-and-Engineering Exam Torrent. For we have successfully help tens of thousands of candidates achieve their aims. We believe you won't be the exception to pass the Cybersecurity-Architecture-and-Engineering exam and get the dreaming Cybersecurity-Architecture-and-Engineering certification.

## WGU Cybersecurity Architecture and Engineering (KFO1/D488) Sample Questions (Q151-Q156):

### NEW QUESTION # 151

Why should an information technology (IT) professional be aware of professional associations?

- A. Professional associations upgrade the company's network.
- B. Professional associations give feedback to management.
- C. Professional associations will ensure higher quality work.
- D. Professional associations provide up-to-date training.

**Answer: D**

Explanation:

Professional associations are vital for IT professionals because they:

- \* Provide up-to-date training: Offering courses, certifications, and workshops to keep members current with the latest technologies, practices, and industry standards.
  - \* Networking opportunities: Facilitating connections with other professionals in the field, which can lead to job opportunities and collaborations.
  - \* Professional development: Offering resources and support for career growth and development.
  - \* Industry standards and best practices: Providing guidelines and frameworks to ensure high-quality work and ethical practices.
- Staying engaged with professional associations helps IT professionals remain knowledgeable and competent in their field.

### NEW QUESTION # 152

Which two options allow an application to access a database?

Choose 2 answers

- A. Database management system (DBMS)
- B. Open Database Connectivity (ODBC) application
- C. Structured Query Language (SQL)
- D. Graphical user interface (GUI)
- E. Java Database Connectivity (JDBC)

**Answer: C,E**

Explanation:

- \* SQL is a standard language used to communicate with and manage databases. It allows applications to perform operations such as querying, updating, and managing data.
- \* JDBC is an API in Java that enables Java applications to interact with databases. It provides methods for querying and updating data in a database using SQL.
- \* DBMS (Database Management System) is the system software for creating and managing databases but not directly used by applications for database access.
- \* ODBC (Open Database Connectivity) is another standard API but specific to applications in a broader range of languages and platforms.
- \* GUI (Graphical User Interface) is a user interface and not a method for applications to access databases.

### NEW QUESTION # 153

During a vulnerability assessment, several end-of-life operating systems were discovered within the environment. Which action should be taken to resolve the issue?

- A. Disconnect the end-of-life machines
- B. Upgrade the remaining end-of-life machines
- C. Shutdown and remove the end-of-life machines
- D. Block the end-of-life machines

**Answer: B**

Explanation:

The most sustainable solution to eliminate security risks associated with legacy systems is to upgrade them to supported versions that receive security updates and patches.

NIST SP 800-128 (Guide for Security-Focused Configuration Management):

"Systems running unsupported or outdated software must be prioritized for upgrade to ensure that known vulnerabilities are mitigated." While short-term isolation may work temporarily, it does not address the root cause or meet compliance requirements long-term.

#WGU Course Alignment:

Domain: System Security Engineering

Topic: Perform lifecycle management and upgrade legacy systems

#### NEW QUESTION # 154

A government agency is planning a hybrid cloud deployment. Strict controls must be in place that can label classified data. The solution must ensure that access rights will be granted based on the user's government security classification.

Which type of access control should be used?

- **A. Mandatory access control (MAC)**
- B. Discretionary access control (DAC)
- C. Role-based access control (RBAC)
- D. Attribute-based access control (ABAC)

**Answer: A**

Explanation:

The correct answer is A - Mandatory access control (MAC).

Per WGU Cybersecurity Architecture and Engineering (KFO1 / D488) coursework, MAC is a strict access control model where access to resources is based on information labels (such as classified, secret, top secret) and user clearances. Only administrators define and control the policy rules, and users cannot alter access settings, making it ideal for environments where classification labels determine access rights, such as government systems.

ABAC (B) focuses on attributes but is more dynamic rather than based purely on rigid classifications. DAC (C) gives data owners control over access permissions, unsuitable for classified government environments.

RBAC (D) assigns permissions based on roles, but not necessarily aligned with security labels.

Reference Extract from Study Guide:

"Mandatory access control (MAC) enforces access policies based on fixed labels and security classifications, making it the preferred model for high-security environments like government agencies handling classified data."

#### NEW QUESTION # 155

Which operation converts raw data into information?

- A. Input
- **B. Processing**
- C. Storage
- D. Output

**Answer: B**

Explanation:

Processing is the operation that converts raw data into meaningful information. Input data is collected and then processed through various means such as calculations, comparisons, or formatting to produce output that can be interpreted and used by humans or other systems.
