## **CCAAK Exam Sample Questions, CCAAK Demo Test**

As we all know, it is difficult to prepare the CCAAK exam by ourselves. Excellent guidance is indispensable. If you urgently need help, come to buy our study materials. Our company has been regarded as the most excellent online retailers of the CCAAK exam question. So our assistance is the most professional and superior. You can totally rely on our study materials to pass the exam. In addition, all installed CCAAK study tool can be used normally. In a sense, our CCAAK Real Exam dumps equal a mobile learning device. We are not just thinking about making money. Your convenience and demands also deserve our deep consideration. At the same time, your property rights never expire once you have paid for money. So the CCAAK study tool can be reused after you have got the CCAAK certificate. You can donate it to your classmates or friends. They will thank you so much.

## **Confluent CCAAK Exam Syllabus Topics:**

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• Troubleshooting: This section of the exam measures skills of a Kafka Administrator and includes diagnosing common issues in Kafka clusters. It covers problem areas such as performance bottlenecks, message delivery failures, replication issues, and consumer lag, along with techniques to resolve them effectively.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• Observability: This section of the exam measures skills of a Site Reliability Engineer and focuses on monitoring Kafka clusters. It assesses knowledge of metrics, logging, and alerting tools, including how to use them to maintain cluster health and performance visibility.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• Kafka Connect: This section of the exam measures skills of a Site Reliability Engineer and addresses the use and management of Kafka Connect for data integration. It includes setting up connectors, managing configurations, and ensuring efficient movement of data between Kafka and external systems.</li> </ul>

## Confluent Certified Administrator for Apache Kafka Sample Questions (Q12-Q17):

### NEW QUESTION # 12

In certain scenarios, it is necessary to weigh the trade-off between latency and throughput. One method to increase throughput is to configure batching of messages.

In addition to batch.size, what other producer property can be used to accomplish this?

- A. linger.ms
- B. sendbufferbytes
- C. delivery.timeout.ms
- D. compression

#### Answer: A

Explanation:

The linger.ms property sets the maximum time the producer will wait before sending a batch, even if the batch isn't full. By increasing linger.ms, you allow more records to accumulate in the batch.

### NEW QUESTION # 13

By default, what do Kafka broker network connections have?

- A. No encryption, no authorization, but have authentication
- B. Encryption and authentication, but no authorization
- C. No encryption, no authentication and no authorization
- D. Encryption, but no authentication or authorization

#### Answer: C

Explanation:

By default, Kafka brokers use the PLAINTEXT protocol for network communication. This means:

- \* No encryption - data is sent in plain text.
- \* No authentication - any client can connect without verifying identity.
- \* No authorization - there are no access control checks by default.

Security features like TLS, SASL, and ACLs must be explicitly configured.

### NEW QUESTION # 14

If a broker's JVM garbage collection takes too long, what can occur?

- A. There is backpressure to, and pausing of, Kafka clients.
- B. Log files written to disk are loaded into the page cache.
- C. ZooKeeper believes the broker to be dead.
- D. There will be a trigger of the broker's log cleaner thread.

## Answer: C

Explanation:

If the broker's JVM garbage collection (GC) pause is too long, it may fail to send heartbeats to ZooKeeper within the expected interval. As a result, ZooKeeper considers the broker dead, and the broker may be removed from the cluster, triggering leader elections and partition reassignments.

## NEW QUESTION # 15

A customer has a use case for a ksqlDB persistent query. You need to make sure that duplicate messages are not processed and messages are not skipped.

Which property should you use?

- A. ksql.streams auto.offset.reset=latest
- B. **processing.guarantee=exactly\_once**
- C. ksql.fail.on.production.error=false
- D. ksql.streams auto offset.reset=earliest

## Answer: B

Explanation:

processing.guarantee=exactly\_once ensures that messages are processed exactly once by ksqlDB, preventing both duplicates and message loss.

## NEW QUESTION # 16

You are using Confluent Schema Registry to provide a RESTful interface for storing and retrieving schemas.

Which types of schemas are supported? (Choose three.)

- A. **Protobuf**
- B. **JSON**
- C. gRPC
- D. Thrift
- E. **Avro**

## Answer: A,B,E

Explanation:

Avro is the original and most commonly used schema format supported by Schema Registry.

Confluent Schema Registry supports JSON Schema for validation and compatibility checks.

Protocol Buffers (Protobuf) are supported for schema management in Schema Registry.

## NEW QUESTION # 17

.....

Our desktop software Confluent CCAAK practice exam software provides a simulated scenario in which you may pick the Confluent CCAAK exam questions and schedule them to replicate an actual Confluent exam-like situation. With each attempt of the Confluent CCAAK Practice Exam in this manner, your score is saved.
