

Valid Zscaler ZDTE Braindumps | Real ZDTE Dumps Free

If you want to know the latest information for the exam timely, you can choose us, we can do that for you. We offer you free update for one year for ZDTE learning materials, so that you can obtain the latest information for the exam. Our system will send you the latest version automatically, and you just need to examine your email for the latest version. In addition, ZDTE Exam Materials are high-quality, and you can improve your efficiency by using them. We have online and offline service, and if you have any questions for ZDTE exam braindumps, you can contact us, and we will give you reply as quickly as we can.

The feedback collected was used to design our products through interviews with top Zscaler Digital Transformation Engineer ZDTE exam professionals. You are certain to see questions similar to the questions on this Zscaler ZDTE exam dumps on the main ZDTE Exam. All you have to do is select the right answer, which is already in the Zscaler ZDTE questions. Zscaler Digital Transformation Engineer ZDTE exam dumps have mock exams that give you real-life exam experience.

Top Valid ZDTE Braindumps | High Pass-Rate Zscaler ZDTE: Zscaler

Digital Transformation Engineer 100% Pass

Prep4exam provides one of the most comprehensive and high-quality Zscaler Digital Transformation Engineer Exam Questions. We cut through the nonsense and made Zscaler Digital Transformation Engineer exam preparation useful, to get your Zscaler Digital Transformation Engineer certification on the first try. Our Zscaler Digital Transformation Engineer ZDTE Questions include real-world questions that will help you learn the fundamentals of the topic not only for the Zscaler Digital Transformation Engineer ZDTE exam but also for your future profession.

Zscaler Digital Transformation Engineer Sample Questions (Q57-Q62):

NEW QUESTION # 57

What feature enables Zscaler logs to be sent to SIEM solutions for long-term storage?

- A. Log Recovery Service
- B. Role-Based Access Control (RBAC)
- C. Zero Trust Exchange Query Engine
- **D. Log Streaming Services**

Answer: D

Explanation:

Zscaler provides specialized Log Streaming Services to export logs from the Zero Trust Exchange into external SIEM or log-analytics platforms for long-term storage and advanced analysis. For Zscaler Private Access (ZPA), the Log Streaming Service (LSS) forwards user activity, user status, App Connector metrics, and other diagnostic logs to a log receiver, which is typically a SIEM, syslog collector, or similar downstream system. Zscaler documentation notes that customers use LSS specifically to store logs beyond the default cloud retention period and to support external analytics and compliance use cases.

On the ZIA side, Nanolog Streaming Service (NSS) fulfills a similar purpose, streaming web and firewall logs from the Zscaler Nanolog cluster into SIEM solutions. Together, these streaming services give organizations centralized visibility and long-term retention while keeping the Zscaler cloud optimized for inline inspection and near-term reporting.

Role-Based Access Control (RBAC) governs who can view or manage configurations, not how logs are exported. The Zero Trust Exchange query or insights interfaces are used for in-portal searching and visualization, and "Log Recovery Service" is not the Zscaler term used for SIEM integration in ZDTE materials. Therefore, Log Streaming Services is the correct answer because it is the named mechanism for streaming Zscaler logs to external SIEM platforms for long-term storage.

NEW QUESTION # 58

What is one of the primary reasons for choosing the right DNS architecture?

- A. To increase the complexity of network configurations
- B. To limit the number of DNS queries a user can make
- **C. To improve overall performance and responsiveness**
- D. To reduce the cost of internet access

Answer: C

Explanation:

In the Zscaler Digital Transformation Engineer material, DNS is highlighted as a critical dependency in the overall user experience path. When DNS responses are slow or inconsistent, even well-designed network paths and high-bandwidth links still result in poor page load times and sluggish application behavior. The Zscaler help on performance explicitly calls out that delayed DNS responses negatively affect page loading times, underscoring that DNS resolution speed directly impacts perceived performance.

Zscaler's DNS Security and Control and Trusted Resolver capabilities are designed not only to improve security but also to deliver "lightning-fast, secure DNS resolution and high availability" and to "ensure a great user experience with requests resolved at the edge." Choosing the right DNS architecture—where resolvers are close to users, highly available, and integrated with security policy—therefore becomes a primary lever to improve performance and responsiveness for all applications.

Limiting the number of DNS queries, reducing internet cost, or adding configuration complexity are not stated goals of Zscaler's recommended DNS design. Instead, the curriculum consistently frames correct DNS architecture as foundational to fast, reliable name resolution and a smooth digital experience, which aligns directly with option B.

NEW QUESTION # 59

What are the valid options as criteria to create an alert rule in ZDX?

- A. DNS Time and Network Response Time
- B. Server Response Time and Packet Loss Rate
- C. Page Fetch Time and Packet Loss Rate
- **D. DNS Time and Server Response Time**

Answer: D

Explanation:

Zscaler Digital Experience (ZDX) uses web probes to measure application performance from the user's perspective. Official ZDX reference material and EDU/ZDTE study guides describe the four key web-probe metrics as Page Fetch Time (PFT), DNS Time, Server Response Time (Time to First Byte), and Availability. These same metrics are explicitly called out in training and exam prep as the values that can be used when defining application-level alert rules (for example, "DNS Time > X ms" or "Server Response Time

> Y ms").

ZDX documentation also explains that each alert rule type (Application, Device, Network, or Call Quality) has its own metrics and criteria, and that application alerts are driven by web-probe metrics like DNS Time and Server Response Time, while network alerts use CloudPath metrics such as latency and packet loss. Because both DNS Time and Server Response Time are application-probe metrics, they can legitimately be used together as criteria in an application-type alert rule.

By contrast, combinations that mix web-probe metrics with network-only metrics (like Packet Loss Rate) or vaguely defined "Network Response Time" do not reflect how ZDX structures its alert criteria per type.

Therefore, among the listed options, the pair that correctly represents valid ZDX alert criteria for application monitoring is DNS Time and Server Response Time.

NEW QUESTION # 60

How many key engines does the Zscaler Firewall Module have?

- **A. Four**
- B. Two
- C. Five
- D. Three

Answer: A

Explanation:

In the Zscaler for Users - Engineer path, the Zscaler Cloud Firewall (Firewall Module in ZIA) is described as being built around four key engines. The training emphasizes that the firewall is not a single, monolithic filter but a set of parallel inspection engines that collectively provide advanced Layer 3/4 control, application and service awareness, DNS security, and inline threat prevention. These engines evaluate traffic simultaneously, and the most restrictive outcome is applied, aligning with Zscaler's broader "parallel processing" model for policy enforcement.

The curriculum highlights that this multi-engine design allows Zscaler to go beyond traditional firewalls, combining user and application awareness with security controls such as IPS and DNS-based protection within the same cloud-native enforcement stack. Having four coordinated engines enables granular, identity-based firewall policies that work for users regardless of location, without the need for separate appliances.

Options suggesting two, three, or five engines do not match the way the Firewall Module is presented in the ZDTE/EDU-202 materials. Therefore, the correct answer, and the number you are expected to know for the exam, is four.

NEW QUESTION # 61

How many minutes of data can the Log Streaming Service retransmit once the connection is restored between App Connectors and Zscaler Private Access (ZPA)?

- A. Last 30 minutes
- B. Last 60 minutes
- **C. Last 15 minutes**
- D. Last 20 minutes

Answer: C

Explanation:

Zscaler Private Access (ZPA) uses the Log Streaming Service (LSS) to deliver ZPA logs (such as user activity and connector/authentication logs) to external SIEM and analytics platforms. LSS relies on a ZPA App Connector as the local relay between the ZPA service and the downstream log receiver. If network connectivity between ZPA and the local App Connector is interrupted, log delivery may be temporarily disrupted.

According to Zscaler integration guidance, when connectivity between ZPA and the local App Connectors is restored, LSS can retransmit up to 15 minutes of previously undelivered log data, although this retransmission is not guaranteed in all circumstances. This limited replay window is designed to provide reasonable resilience for short outages without requiring large local storage on the connector.

The 15-minute buffer applies specifically to ZPA log streaming scenarios and is distinct from longer-term log retention in Zscaler's logging cluster or external SIEM. Options A, C, and D overstate the supported replay duration and do not match Zscaler's documented behavior. To minimize log gaps beyond this 15-minute window, Zscaler recommends resilient network paths for App Connectors and careful monitoring of connector health so that LSS can operate continuously.

NEW QUESTION # 62

.....

Do you want to pass ZDTE exam in a short time? ZDTE dumps and answers from our Prep4cram site are all created by the IT talents with more than 10-year experience in IT certification. The Prep4cram site offers the most comprehensive certification standards and ZDTE Study Guide. According to our end users of ZDTE dumps, it indicates that the passing rate of ZDTE exam is as high as 100%. If you have any questions about ZDTE exam dump, we will answer you in first time.

Real ZDTE Dumps Free: https://www.prep4cram.com/ZDTE_exam-questions.html

Prep4cram is a leading platform that is committed to preparing the Zscaler ZDTE certification exam candidates in a short time period. If you have known before, it is not hard to find that the ZDTE study materials of our company are very popular with candidates, no matter students or businessman. This article will go over the three formats of the Zscaler Digital Transformation Engineer (ZDTE) practice material that we offer.

A common goal of many software projects is to make ZDTE some profit for someone. While the insertion point is at the end of the second paragraph, go to the Type menu and choose tabs, or if the Test ZDTE Preparation tabs ruler is already on the screen, click the tiny magnet icon to snap it to the text frame.

100% Free ZDTE – 100% Free Valid Braindumps | the Best Real Zscaler Digital Transformation Engineer Dumps Free

Prep4cram is a leading platform that is committed to preparing the Zscaler ZDTE Certification Exam candidates in a short time period. If you have known before, it is not hard to find that the ZDTE study materials of our company are very popular with candidates, no matter students or businessman.

This article will go over the three formats of the Zscaler Digital Transformation Engineer (ZDTE) practice material that we offer. We have more than ten years' experience in providing high-quality and valid ZDTE test questions.

We are also providing guaranteed success and after using ZDTE practice exam questions, you will be able to clear the Zscaler ZDTE test on the first attempt.
