So as for us, we have enough confidence to provide you with the best MB-330 exam questions for your study to pass it. With many years work experience, we have fast reaction speed to market change and need. In this way, we have the Latest MB-330 Test Guide. You don't worry about that how to keep up with the market trend, just follow us. In addition to the industry trends, the MB-330 test guide is written by lots of past materials' rigorous analyses. Only with strict study, we write the latest and the specialized study materials. We can say that our MB-330 exam questions are the most suitable for examinee to pass the exam.

Skills measured on the Exam MB-330

As mentioned above, each candidate must demonstrate their ability to implement product information management, inventory management, supply chain processes, warehouse and transportation management, and master planning. Thus, according to the MB-330 Exam skills outline, which can be found on the official exam page, the test includes questions from five main areas:

- **Implementing Inventory management.** This means demonstrating skills in the management of inventory activities, and Inventory management configuration.
- **Implementing warehouse management and transportation management.** According to this exam domain to take the test you should configure warehouse management, perform warehouse management processes, as well as implement transportation management on the associate level.
- **Implementing master planning.** Finally, candidates show their skills in master planning and forecasting configuration together with master plans and manage planned orders running.
- **Implementing management for product information.** So, you should be able to create, configure and manage products for the supply chain management. Moreover, each candidate has to demonstrate an ability to manage inventory pricing and costing.
- **Implementing and management of Supply Chain processes.** In other words, candidates have to show their competence in Procurement and sourcing alongside common sales and marketing features.

Microsoft Dynamics 365 Supply Chain Management Functional Consultant Sample Questions (Q69-Q74):

NEW QUESTION # 69

A distribution company uses Dynamics 365 Supply Chain Management.

A high-volume warehouse for the distribution company automatically releases transfer order lines to the warehouse throughout the day.

Order line quantities are frequently changed after release to the warehouse. However, the load lines are not always updated.

You need to configure automatic updates to the load lines.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

The screenshot shows the Microsoft Dynamics 365 Setup interface. It features a 'Requirement' section with two items:

- Requirement 1:** 'Set up shipments to always auto-update.' This dropdown menu is open, showing four options: 'Configure Warehouse parameters.', 'Configure Site parameters.', 'Configure Transfer orders.', and 'Configure Wave templates.'
- Requirement 2:** 'Configure the Wave template.' This dropdown menu is also open, showing three options: 'Disable automatic work creation.', 'Enable automatic wave creation.', and 'Enable automatic work creation.'

The Microsoft logo and the word 'Setup' are visible in the top right corner of the interface.

Answer:

Explanation:

Requirement	Setup
Set up shipments to always auto-update.	<ul style="list-style-type: none"> Configure Warehouse parameters. Configure Site parameters. Configure Transfer orders. Configure Wave templates.
Configure the Wave template.	<ul style="list-style-type: none"> Disable automatic work creation. Enable automatic wave creation. Enable automatic work creation.

Explanation:

Box 1: Configure Warehouse parameters

Turn on the auto-update shipment functionality

To turn on the auto-update shipment functionality, follow these steps.

* Go to Warehouse management > Setup > Warehouse > Warehouses.

* Select warehouse 24.

* On the Warehouse FastTab, in the Auto update shipment field, change the value from On quantity decrease to Always.

After you change the value to Always, any increases or decreases in the quantities on sales order lines and transfer order lines, and any additions of new lines, are reflected on shipments and loads for the selected warehouse, given the previously mentioned update constraints.

Box 2: Disable automatic work creation.

Change the wave template so that load lines aren't automatically processed To configure the wave template so that it doesn't automatically process load lines, follow these steps.

* Go to Warehouse management > Setup > Waves > Wave templates.

* Select wave template 24 Shipping default.

* Select Edit.

* On the General FastTab, set the Automate wave creation option to Yes, and make sure that all other options are set to No.

It's important that no work be automatically created and released as part of the wave creation process. After work is created that is related to the load line that was created for the sales order line, the load line is no longer automatically updated if the quantity on the sales order line is changed.

NEW QUESTION # 70

A manufacturing company is setting up a new warehouse.

The warehouse must store a product that is currently stored in another warehouse.

You need to create new item coverage for the warehouse.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Answer:

Explanation:

NEW QUESTION # 71

Drag and Drop Question

A company uses Dynamics 365 Supply Chain Management. A group of machines requires monthly maintenance that includes the replacement of spare parts such as belts and oil.

A subset of the machines also has existing maintenance requests. The service manager is concerned that an insufficient number of technicians and parts are available to complete the requests.

The company must determine the following:

- The impact of upcoming work orders prior to scheduling.
- The spare parts required for existing maintenance orders.

You need to determine the required forecasting.

Which forecasting component should you configure for each requirement? To answer, drag the appropriate forecasting components to the correct requirements. Each forecasting component may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Forecasting components	Requirement	Forecasting component
Both	Determine the impact of upcoming work orders prior to scheduling.	<input type="text"/>
Item forecast only	Determine the spare parts for existing maintenance orders.	<input type="text"/>
Capacity forecast only		

Answer:

Explanation:

Forecasting components	Requirement	Forecasting component
	Determine the impact of upcoming work orders prior to scheduling.	Both
Capacity forecast only	Determine the spare parts for existing maintenance orders.	Item forecast only

NEW QUESTION # 72

A company orders parts from a vendor. The vendor frequently ships more units than the company orders.

An approving manager must receive notification when the quantity of units received is more than 10 percent above the number of units ordered.

You have an existing notification workflow.

You need to ensure that the notification is generated.

How should you configure the system? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area	Requirement	Action
Configure overdelivery/underdelivery percent.		<ul style="list-style-type: none"> On the Purchase order form, purchase order lines fast tab, configure the overdelivery field. On the Purchase order form, purchase order lines fast tab, configure the underdelivery field. On the Sales order form, sales order line fast tab, configure the overdelivery field. On the Sales order form, sales order line fast tab, configure the underdelivery field.
Notify user about required approval.		<ul style="list-style-type: none"> Register the product and post the receipt list. Register the product on a purchase order line and post a receipt. Receive a product on a transfer order. Register the product on an Arrival journal and post a journal.
