CPC-CDE-RECERT Exam Dumps Free - New CPC-CDE-RECERT Dumps Pdf

If you fail in the exam with our CPC-CDE-RECERT quiz prep we will refund you in full at one time immediately. If only you provide the proof which include the exam proof and the scanning copy or the screenshot of the failure marks we will refund you immediately. If any problems or doubts about our CPC-CDE-RECERT exam torrent exist, please contact our customer service personnel online or contact us by mails and we will reply you and solve your doubts immediately. Before you buy our product, you can download and try out it freely so you can have a good understanding of our CPC-CDE-RECERT Quiz prep. Please feel safe to purchase our CPC-CDE-RECERT exam torrent any time as you like. We provide the best service to the client and hope the client can be satisfied.

CyberArk CDE-CPC Recertification Sample Questions (Q34-Q39):

NEW QUESTION # 34

The Secure Tunnel component of CyberArk Privilege Cloud connects to which services in the CyberArk Privilege Cloud? (Choose two.)

- A. <https://connector-_{subdomain}.privilegecloud.cyberark.cloud>
- B. <https://update.privilegecloud.cyberark.cloud>
- C. <https://backend-services.privilegecloud.cyberark.cloud>
- D. <https://telemetry.privilegecloud.cyberark.cloud>
- E. <https://console.privilegecloud.cyberark.cloud>

Answer: A,E

Explanation:

CyberArk's official outbound traffic/network requirements explicitly list the two Privilege Cloud cloud- side endpoints that are required for Secure Tunnel communications (for REST/API calls over HTTPS/443):

* Backend service management (Required for Secure Tunnel): <https://console.privilegecloud.cyberark.com>

* Connector (Required for Secure Tunnel): <https://connector-_{subdomain}.privilegecloud.cyberark.com>

These map directly to answer choices A (console) and B (connector-_{subdomain}).

Note: Your options use the .cyberark.cloud domain, while CyberArk's network requirements documentation shows these endpoints in the .cyberark.com domain for Privilege Cloud. The service roles (Console + Connector endpoint) are what Secure Tunnel must reach, and those are the two "Required for Secure Tunnel" services in the official requirements.

Why the other options are not selected (based on what's "required for Secure Tunnel" in the official allowlist guidance):

* C (backend-services...): Not listed in CyberArk's published "Required for Secure Tunnel" FQDN allowlist entries (console + connector are).

* D (telemetry...): Telemetry is a separate capability (dashboards / utilization tracking) and is not documented as the required Secure Tunnel service endpoint.

* E (update...): Secure Tunnel upgrade/download processes are documented, but "update.*" is not listed as a required Secure Tunnel cloud endpoint in the outbound allowlist table.

NEW QUESTION # 35

When calling the PSM Health Check Webservice to assess the state of a PSM node, which response code does a healthy node return?

- A. 503 (OK)
- B. 404 (OK)
- C. 500 (OK)
- D. 200 (OK)

Answer: D

Explanation:

CyberArk documents that the health check service returns HTTP 200 (OK) when the PSM service is healthy, and returns 503 (Service unavailable) when it is not healthy (in code-based behavior).

NEW QUESTION # 36

You want to improve performance on the CPM by restricting accounts for the CYBRWINDAD platform to only the WINDEMEA and WINDEMEA_ADMIN Safes. How do you set this in CyberArk?

- A. Modify cpm.ini on the relevant CPM(s) and add AllowedSafesCYBRWINDAD and set it to (WINDEMEA)|(WINDEMEAADMIN).
- B. In the settings for Configuration/CPM assigned to the WINDEMEA and WINDEMEAADMIN Safes, configure AllowedSafes and set it to (WINDEMEA)|(WINDEMEAADMIN).
- C. In the CYBRWINDAD platform, under UI & Workflows > Properties > Optional, configure AllowedSafes and set it to (WINDEMEA)|(WINDEMEA_ADMIN).
- D. In the CYBRWINDAD platform, under Automatic Password Management > General, configure AllowedSafes and set it to (WINDEMEA)|(WINDEMEA_ADMIN).

Answer: D

Explanation:

CyberArk's official guidance for restricting a platform to specific Safes is to set the AllowedSafes platform parameter in the General

section of the platform under Automatic Password Management.

AllowedSafes uses a regular expression to match Safe names, which is why a pattern such as (WINDEMEA)|(WINDEMEA_ADMIN) is used to allow exactly those two Safe names.

NEW QUESTION # 37

When using Connector Management, how do you configure a DR CPM in Privilege Cloud shared services? (Choose two.)

- A. When prompted for the Vault administrator credentials on the installation windows, leave it blank and proceed.
- B. When prompted for the Vault IP address on the installation windows, leave it blank and proceed.
- C. When prompted to select the CPM mode, select Passive.
- D. Stop the CyberArk Password Manager service and set the startup type to Automatic.
- E. Stop the CyberArk Password Manager service and set the startup type to Manual.

Answer: C,E

Explanation:

CyberArk's official DR CPM procedure for Privilege Cloud (shared services) describes two key actions in this flow:

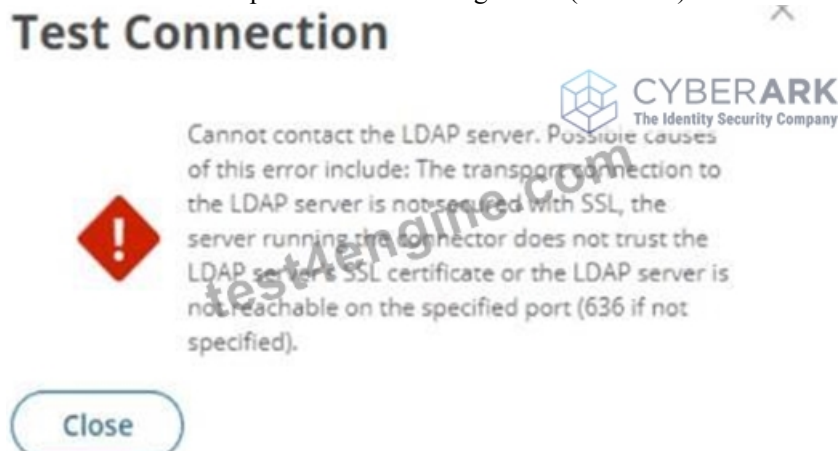

* During installation (Connector Management): When prompted to select the CPM mode, choose Passive.

* After installation (configuration step): Stop the CyberArk Password Manager service and set its startup type to Manual. These map directly to answers C and A.

NEW QUESTION # 38

Refer to the exhibit.

You set up your LDAP Directory in CyberArk Identity, but encountered an error during the connection test. Which scenarios could represent a valid misconfiguration? (Choose 2.)

- A. All required CA Certificates have been installed on the CyberArk Identity Connector but the LDAP Bind credentials provided are incorrect.
- B. 'Verify Server Certificate' is activated but the provided hostname is not listed as a Subject Alternative Name (SAN) in the LDAP server's certificate.
- C. TCP Port 636 could be blocked by a network firewall, preventing communication between the Secure Tunnel and the LDAP Server.
- D. TCP Port 636 could be blocked by a network firewall, preventing communication between the CyberArk Identity Connector and the LDAP Server.

Answer: B,D

Explanation:

From the error message provided, two likely scenarios could represent valid misconfigurations:

* TCP Port 636 could be blocked by a network firewall, preventing communication between the CyberArk Identity Connector and the LDAP Server (A). This is a common issue where firewall settings prevent the secure communication port (typically 636 for LDAPS) from transmitting data between the server and the connector, thus blocking the connection attempt.

* 'Verify Server Certificate' is activated but the provided hostname is not listed as a Subject Alternative Name (SAN) in the LDAP server's certificate (C). This scenario occurs when SSL/TLS security measures are stringent, requiring that the hostname used to

connect to the LDAP server must match one listed in the server's SSL certificate. If the hostname does not match, the connection will fail due to SSL certificate validation errors.

NEW QUESTION # 39

.....

One of the few things that can't be brought back is the wasted time, so don't waste your precious time and get your CyberArk practice test in time by our latest CPC-CDE-RECERT exam questions from our online test engine. You will be able to clear your CPC-CDE-RECERT Real Exam with our online version providing exam simulation. Your goal is very easy to accomplish and 100% guaranteed.
