Candidates can also access online tutorials, documentation, and community forums to learn about Power Platform development and get help from experts and peers.

Microsoft Power Platform Developer Sample Questions (Q183-Q188):

NEW QUESTION # 183
An organization has a custom Assignments entity that guides agent actions. Team leaders for each assignment group must be able to review any changes made to assignment data by their agents.
You have the following JSON segment:
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:
Explanation
Box 1: Yes
Delta query lets you query for additions, deletions, or updates to users, by way of a series of delta function calls. Delta query enables you discover changes to users without having to fetch the entire set of users from Microsoft Graph and compare changes.
Box 2: No
Tracking user changes
Tracking user changes is a round of one or more GET requests with the delta function. You make a GET request much like the way you list users, except that you include the following:
The delta function.
A state token (deltaToken or skipToken) from the previous GET delta function call.
Delta tokens are only valid for a specific period before the client application needs to run a full synchronization again. For directory objects (application, administrativeUnit, directoryObject, directoryRole, group, orgContact, oauth2permissiongrant, servicePrincipal, and user), the limit is 7 days.
Box 3: No
There is limited support for $filter:
The only supported $filter expression is for tracking changes on a specific object: $filter=id+eq+{value}.
Box 4: Yes

NEW QUESTION # 184
You create a suite of Power Platform-based order management canvas apps for a bakery that has five retail stores. Each store uses a tablet device to manage inventory and process orders.
You need to make the following changes to the original order tracking app:
* When an online order for delivery is received, send the order to the bakery that is located closest to the order destination.
* When an online order for pickup is received, require store staff to enter an estimated time in an app.
Staff must prepare the order and then use the app to notify the customer when the order is ready.
* Allow the store manager to personalize the company's corporate weekly newsletter and add store- specific specials.
You must minimize the amount of custom code and configuration required to implement the solution.
What should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:
Explanation:
Box 1: Custom self-service portal for both employers and job candidates If you select an environment that contains customer engagement, you can create the following portals:
Customer self-service portal: A customer self-service portal enables customers to access self-service knowledge, support resources, view the progress of their cases, and provide feedback.
Partner portal: A partner portal allows every organization with resellers, distributors, suppliers, or partners to have real-time access to every stage of shared activities.

Employee self-service portal: An employee self-service portal creates an efficient and well-informed workforce by streamlining common tasks and empowering every employee with a definitive source of knowledge.
Box 2: Model-driven app with push notifications
Compared to canvas apps, model-driven apps in PowerApps are based on underlying data - specifically, the data stored in Common Data Service (CDS).
Box 3: Webform with target set to the job custom entity
Box 4: Configure a value for the Execute Workflow on Redeeming Contact option only.
Execute Workflow on Redeeming Contact: A workflow process to be executed when the invite is redeemed.
The workflow will be passed the redeeming contact as the primary entity.
Box 5: Configure the value for the Assigned to Account option only.
Assign to Account: An account record to be associated as the redeeming contact's parent customer when the invite is redeemed.

NEW QUESTION # 187
Users are directed lo a form in a model-driven app through a special URL that passes values for three lookup columns.
The form consists of three tabs: A, which is the default tab, B. and C. The form has JavaScript code registered on the Onload and OnSave events as follows:
* OnLoad: A lookup column on each tab is used to retrieve data. The data is used to populate columns on that same tab.
* OnSave: Data validation involves calculations of columns on the form. If a value is outside the acceptable range, the record must not be saved.
Users report that loading and saving the form takes too long when they create a new record.
You need to shorten the time it takes to load and save the form without losing functionality.

Which new event registrations should you create? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.
