## Snowflake Certified SnowPro Associate - Platform Certification Sample Questions (Q76-Q81):

NEW QUESTION # 76

What is a key characteristic of a Snowflake virtual warehouse?

- A. It manages account roles.
- B. It permanently stores data.
- C. It encrypts data.
- **D. It provides compute resources.**

**Answer: D**

Explanation:

A virtual warehouse is the compute engine of Snowflake. It provides CPU, memory, and temporary storage needed to execute SQL queries, data loading operations, and DML actions. Warehouses can be sized dynamically and suspended or resumed to optimize cost.

Warehouses do not store data; Snowflake's storage is independent and centralized. Warehouses do not manage roles-access control is handled through Snowflake's RBAC system. Encryption is performed automatically by Snowflake's storage and cloud services, not by warehouses.

Thus, the correct characteristic is that virtual warehouses supply compute.

#### **NEW QUESTION # 77**

Which Snowflake object is a logical container for schemas and other database objects?

- A. Table
- **B. Database**
- C. View
- D. Schema

**Answer: B**

Explanation:

A Database is the highest logical container for schemas and their objects in Snowflake.

Hierarchy:

Account # Database # Schema # Tables, Views, Stages, etc.

Schemas organize objects within a database; tables and views do not contain objects.

#### **NEW QUESTION # 78**

What is Snowflake's primary security capability?

- A. Role-based access control (RBAC)
- B. Automated data masking
- **C. End-to-end encryption for all data, in transit and at rest**
- D. Network perimeter defense

**Answer: C**

Explanation:

Snowflake's foundational security capability is always-on end-to-end encryption, applied to all customer data both at rest and in transit. Snowflake encrypts data stored in micro-partitions using AES-256, and all network communication uses TLS encryption. Key management is automated through Snowflake's hierarchical key model, providing additional rotation, rekeying, and defense-in-depth mechanisms.

While RBAC, masking policies, and network policies are crucial components of Snowflake security, encryption is the platform's guaranteed, baseline, mandatory protection feature. It applies universally to all data, regardless of workload, role configuration, or user settings.

Option A: automated masking is optional and policy-driven, not a primary universal mechanism.

Option B: network perimeter defense exists but is not the platform's core foundation.  
Option C: RBAC controls access but does not protect data itself.  
Thus, Snowflake's primary and most universal security capability is end-to-end encryption.

#### NEW QUESTION # 79

Consider the following Snowflake warehouse definition: 'CREATE OR REPLACE WAREHOUSE MY\_WAREHOUSE WITH WAREHOUSE\_SIZE = 'MEDIUM' WAREHOUSE\_TYPE = 'STANDARD' AUTO\_SUSPEND = 300 AUTO\_RESUME = TRUE MIN\_CLUSTER\_COUNT = 1 MAX\_CLUSTER\_COUNT = 3 SCALING\_POLICY = 'ECONOMY;'. Which of the following statements are TRUE regarding this warehouse? (Select all that apply)

- A. The 'WAREHOUSE\_TYPE = 'STANDARD'' setting is invalid and will cause an error.
- B. The warehouse will always have at least one active cluster.
- C. The warehouse is optimized for minimizing costs rather than maximizing performance when scaling.
- D. The warehouse will automatically suspend after 5 minutes of inactivity.
- E. The warehouse can scale up to a maximum of three clusters to handle concurrent queries.

**Answer: B,C,D,E**

Explanation:

The warehouse will auto-suspend after 300 seconds (5 minutes) of inactivity (A). = 1 ` ensures at least one active cluster (B). = 3' allows scaling to three clusters (C). 'SCALING\_POLICY = 'ECONOMY'' prioritizes cost savings over immediate performance during scaling (D). 'WAREHOUSE\_TYPE = 'STANDARD'' is a valid setting, it defines the warehouse as using the standard model for resource management.

#### NEW QUESTION # 80

What is the highest level object in the Snowflake object hierarchy?

- A. Schema
- B. Account
- C. Database
- D. Virtual Warehouse

**Answer: B**

Explanation:

The Account is the top-level Snowflake container encompassing:

- \* All databases
- \* All schemas
- \* All compute resources (warehouses)
- \* All roles, users, and governance structures

All other objects exist within the Account context.
