The Microsoft AZ-800 is available in three easy-to-use forms. The first one is Microsoft AZ-800 dumps PDF format. It is printable and portable. You can print Administering Windows Server Hybrid Core Infrastructure (AZ-800) questions PDF or access them via your smartphones, tablets, and laptops. The PDF format can be used anywhere and is essential for students who like to learn on the go.

Microsoft AZ-800 Certification Exam is designed to test the skills and knowledge of IT professionals who are responsible for administering and managing Windows Server Hybrid Core Infrastructure. AZ-800 exam covers a wide range of topics related to the planning, deployment, configuration, and maintenance of hybrid cloud environments that incorporate both on-premises and cloud-based resources.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q189-Q194):

NEW QUESTION # 189
You need to implement an availability solution for DHCP that meets the networking requirements.
Which two actions should you perform? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

- A. On each DHCP server, install the Failover Clustering feature and add the DHCP cluster role.
- B. DHCP2. configure a scope that contains 25 percent of the IP addresses from Scope 1 .
- C. On the router in each office, configure a DHCP relay.
- D. On DHCP1. create a scope that contains 25 percent of the IP addresses from Scope2.
- E. On each DHCP scope, configure DHCP failover.

Answer: C,E

NEW QUESTION # 190
You have a server named Server1 that runs Windows Server and contains two drives named C and D. Server1 hosts multiple file shares.
You enable Data Deduplication on drive D and select the General purpose file server workload.
You need to minimize the space consumed by files that were recently modified or deleted.
What should you do?

- A. Run the set-Dedupvoiume cmdlet and configure the InputOutputScale settings.
- B. Run the set-dedupvolume cmdlet and configure the scrubbing job.
- C. Run the Set-DedupSchedule Cmdlet and configure a GarbageCollection job.
- D. Run the Set-DedupSchedule cmdlet and configure the optimization job.

Answer: C

Explanation:
Topic 2, Contoso Ltd
Overview
This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.
To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more Information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.
At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.
To start the case study
To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements, if the case study has an All Information tab. note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.
AD DS Environment
The network contains an on-premises Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains two domains named contoso.com and canada.contoso.com. The forest contains the domain controllers shown in the following table.
All the domain controllers are global catalog servers.

Server Infrastructure
The network contains the servers shown in the following table.

A server named Server4 runs Windows Server and is in a workgroup. Windows Firewall on Servei4 uses the private profile.
Server2 hosts three virtual machines named VM1. VM2, and VM3.
VM3 is a file server that stores data in the volumes shown in the following table.

Group Policies
The contoso.com domain has the Group Policies Objects (GPOs) shown in the following table.

Existing Identities
The forest contains the users shown in the following table.

The forest contains the groups shown in the following table.

Current Problems
When an administrator signs in to the console of VM2 by using Virtual Machine Connection, and then disconnects from the session without signing out another administrator can connect to the console session as the currently signed-in user.
Requirements
Contoso identifies the following technical requirements:
* Change the replication schedule for all site links to 30 minutes.
* Promote Server1 to a domain controller in canada.contoso.com.
* Install and authorize Server3 as a DHCP server.
* Ensure that User! can manage the membership of all the groups in Contoso\OU3.
* Ensure that you can manage Server4 from Server1 by using PowerShell removing.
* Ensure that you can run virtual machines on VM1.
* Force users to provide credentials when they connect to VM2.
* On VM3, ensure that Data Deduplication on all volumes is possible.

NEW QUESTION # 191
You have a server named Server1 that runs Windows Server and has the Hyper-V server role installed.
You need 10 limit which Hyper-V module cmdlets helpdesk users can use when administering Server 1 remotely.
You configure Just Enough Administration (JEA) and successfully build the role capabilities and session configuration files.
How should you complete the PowerShell command? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

In Just Enough Administration (JEA), you restrict what remote users can do by publishing a PowerShell session endpoint that references a session configuration file and one or more role capability files. The AZ-
800 "Administering Windows Server Hybrid Core Infrastructure" materials explain that a JEA deployment follows this order: (1) create role capability files (.psrc) in a module's RoleCapabilities folder to enumerate allowed cmdlets, functions, and parameters; (2) author a session configuration file (.pssc)-typically with New-PSSessionConfigurationFile-that maps users or groups to the role capabilities; and (3) register the endpoint with Register-PSSessionConfiguration, supplying the .pssc path and a Name for the endpoint. Only after registration can helpdesk users connect to the constrained endpoint.
Critically, among the listed cmdlets, Register-PSSessionConfiguration is the one that accepts -Name and - Path to a .pssc file, which matches the prompt (-Path .\hypervJeaConfig___ -Name 'hypervJeaHelpDesk' - Force). Enter-PSSession is for connecting to an already published endpoint, and New- PSSessionConfigurationFile creates the .pssc but does not publish it. Likewise, file types .ps1 (script), .psm1 (module), and .psrc (role capability) are not valid for the -Path parameter when registering an endpoint.
Therefore, the correct completion is:
Register-PSSessionConfiguration -Path .\hypervJeaConfig.pssc -Name 'hypervJeaHelpDesk' -Force.

NEW QUESTION # 192
Your network contains an Active Directory Domain Services (AD DS) domain. The domain contains two servers named Server1 and Server2 and the users shown in the following table.
Which users can establish a PowerShell remoting session from Server1 to Server2?

- A. User1, User3. and User4 only
- B. User1 and User3 only

- C. User3 and User4 only
- D. User2 and User4 only
- E. User1, User2, User3, and User4

Answer: A

NEW QUESTION # 193

You need to sync files from an on premises server named Server1 to Azure by using Azure File Sync.

You have a cloud tiering policy that is configured for 30 percent free space and 70 days.

Volume E on Server1 is 500 GB.

A year ago, you configured E:\Data on Server1 to sync by using Azure File Sync. The files that are visible in E:\Data are shown in the following table.

Volume E does NOT contain any other files.

Where are File1 and File3 located? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Reference:

https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/azure/azure-file-sync

https://docs.microsoft.com/en-us/azure/storage/file-sync/file-sync-cloud-tiering-overview

NEW QUESTION # 194

......

Earning the Administering Windows Server Hybrid Core Infrastructure (AZ-800) exam credential is undoubtedly a big achievement. No matter how hard the Administering Windows Server Hybrid Core Infrastructure (AZ-800) test of this certification is, it serves the important purpose to validate skills in the Microsoft industry. Once you crack the Administering Windows Server Hybrid Core Infrastructure (AZ-800) exam, a whole new career scope opens up for you. Candidates for the Administering Windows Server Hybrid Core Infrastructure (AZ-800) exam dumps usually don't have enough time to study for the test. To prepare successfully in a short time, you need a trusted platform of real and updated Administering Windows Server Hybrid Core Infrastructure (AZ-800) exam dumps.
