CompTIA A+ Certification Exam: Core 2 Sample Questions (Q210-Q215):

NEW QUESTION # 210

A systems administrator is configuring a new Windows Server-based storage array. The administrator needs to select a filesystem that provides maximum data integrity, protection against data degradation (bit rot), and the ability to handle very large volumes and files beyond the typical limits of NTFS. Which of the following is the MOST appropriate choice for this requirement?

- A. XFS
- B. APFS
- C. ReFS
- D. exFAT

Answer: C

Explanation:

Within the Windows ecosystem, Microsoft introduced ReFS (Resilient File System) as the next-generation filesystem concept designed to improve integrity and resilience, particularly for large storage and fault-tolerant configurations. Among the options, XFS is a Linux filesystem, APFS is Apple's modern filesystem, and exFAT is primarily intended for removable media compatibility-not as

an NTFS successor.

In the provided CompTIA A+ practice material set, ReFS is explicitly identified as "Resilient File System (ReFS)" and discussed as a Windows storage/filesystem technology. This aligns with the exam framing that ReFS is the Windows-side "successor" concept compared with NTFS in capability and design goals for modern storage scenarios. Therefore, the correct answer is ReFS (A).

NEW QUESTION # 211

Which of the following script types requires that the system mode is set to Unrestricted to run unsigned scripts?

- A. .py
- B. .js
- C. .bat
- D. .ps1

Answer: D

Explanation:

PowerShell scripts (.ps1) require the execution policy to be set to Unrestricted (or another permissive level) to run unsigned scripts.

NEW QUESTION # 212

A customer is upgrading their workstation from Windows 10 to Windows 11. They perform a clean installation from a USB drive. After the system restarts, the installer loads again. Which of the following should the user do to complete the installation?

- A. Run chkdsk from the USB.
- B. Turn off TPM.
- C. Change MBR to UEFI.
- D. Remove the USB drive.

Answer: D

Explanation:

Removing the USB drive allows the system to boot from the newly installed Windows 11 operating system, rather than restarting the installation process.

NEW QUESTION # 213

Which of the following Linux commands is used to read another command's documentation?

- A. chmod
- B. man
- C. sudo
- D. cat

Answer: B

Explanation:

The correct answer is C. man, which stands for manual. The man command is used in Linux and UNIX- based operating systems to display the official documentation for commands, configuration files, and system calls. This documentation includes descriptions, syntax, available options, and usage examples.

The Quentin Docter - CompTIA A+ Complete Study Guide explains that Linux relies heavily on built-in documentation accessible from the command line. The man pages are considered the authoritative reference for how a command works and what options it supports. For example, running man cp displays documentation for the file copy command.

The Travis Everett & Andrew Hutz - All-in-One Exam Guide emphasizes that learning to use man is essential for Linux administration and troubleshooting. Unlike graphical help systems, man pages are always available locally and do not require internet access.

The Mike Meyers / Mark Soper Lab Manual clarifies that chmod changes file permissions, cat displays file contents, and sudo allows commands to be run with elevated privileges. None of these commands provide documentation about other commands.

Because the question specifically asks about reading another command's documentation, the Linux command designed for that exact purpose is man, making C the correct answer.

NEW QUESTION # 214

A customer wants to format an external hard drive to work on both Windows and macOS. Which of the following filesystems is the best to use?

- A. NTFS
- B. XFS
- C. APFS
- **D. exFAT**

Answer: D

Explanation:

The correct answer is B. exFAT, because exFAT (Extended File Allocation Table) is designed to provide cross-platform compatibility between Windows and macOS while supporting large files and large storage devices. When an external hard drive must be readable and writable by both operating systems without additional drivers or configuration, exFAT is the preferred choice. According to the Quentin Docter - CompTIA A+ Complete Study Guide, exFAT was developed to overcome the limitations of FAT32, such as file size and volume size restrictions, while maintaining broad operating system support. Both Windows and macOS include native support for exFAT, making it ideal for removable storage devices.

The Travis Everett & Andrew Hutz - CompTIA A+ All-in-One Exam Guide explains that NTFS is fully supported on Windows but only has limited or read-only support on macOS by default. APFS is Apple's proprietary filesystem and is not natively supported by Windows. XFS is a Linux filesystem and is incompatible with both Windows and macOS without third-party tools.

The Mike Meyers / Mark Soper Lab Manual reinforces that for external drives shared across platforms, exFAT offers the best balance of compatibility, performance, and simplicity.

Therefore, exFAT is the best filesystem choice, making B the correct answer.
