

C-CPI-2506최신버전시험대비자료덤프자료는SAP Certified Associate - Integration Developer최고의시험대비자료

그 외, Pass4Test C-CPI-2506 시험 문제집 일부가 지금은 무료입니다: <https://drive.google.com/open?id=1jRWZwzIH2mYTepxkkHJXC9LmkDqjArIP>

Pass4Test는 SAP C-CPI-2506 시험을 패스할 수 있는 아주 좋은 사이트입니다. Pass4Test은 아주 알맞게 최고의 SAP C-CPI-2506 시험문제와 답 내용을 만들어 냅니다. 덤프는 기존의 시험문제와 답과 시험문제분석 등입니다. Pass4Test에서 제공하는 SAP C-CPI-2506 시험자료의 문제와 답은 실제 시험의 문제와 답과 아주 비슷합니다.

SAP인증 C-CPI-2506 시험을 가장 빠른 시일내에 가장 쉬운 방법으로 패스하는 방법을 고심초사한 끝에 Pass4Test에서 연구해 내었습니다. 그건 바로 Pass4Test의 SAP인증 C-CPI-2506 덤프로 SAP인증 C-CPI-2506 시험에 대비하는 것입니다. Pass4Test의 SAP인증 C-CPI-2506 덤프 품질을 검증하려면 구매사이트의 무료샘플을 체험해보시면 됩니다. 자격증을 많이 취득하여 멋진 IT전문가로 되세요.

인기자격증 C-CPI-2506최신버전 시험대비자료 덤프문제

SAP인증 C-CPI-2506 시험은 최근 제일 인기있는 인증시험입니다. IT업계에 종사하시는 분들은 자격증취득으로 자신의 가치를 업그레이드할 수 있습니다. SAP인증 C-CPI-2506 시험은 유용한 IT자격증을 취득할 수 있는 시험중의 한 과목입니다. Pass4Test에서 제공해 드리는 SAP인증 C-CPI-2506 덤프는 여러분들이 한 방에 시험에서 통과하도록 도와드립니다. 덤프를 공부하는 과정은 IT지식을 더 많이 배워가는 과정입니다. 시험대비뿐만 아니라 많은 지식을 배워드릴 수 있는 덤프를 Pass4Test에서 제공해드립니다. Pass4Test 덤프는 선택하시면 성공을 선택한 것입니다.

SAP C-CPI-2506 시험요강:

주제	소개
주제 1	Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
주제 2	SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.

주제 3	• SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
주제 4	• Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.

최신 SAP Certified Associate C-CPI-2506 무료 샘플문제 (Q27-Q32):

질문 # 27

How do you configure a SOAP adapter for asynchronous processing?

- A. Message Exchange Pattern: Request-Reply. Process Settings: WS Standard
- B. Message Exchange Pattern: One-Way. Process Settings: Robust
- C. Message Exchange Pattern: Request-Reply. Process Settings: Robust
- D. Message Exchange Pattern: One-Way. Process Settings: WS Standard

정답: B

설명:

For asynchronous processing in a SOAP adapter (SAP Cloud Integration):

Use Message Exchange Pattern = One-Way # Indicates no response is expected.

Choose Process Settings = Robust # Ensures message reliability and error handling in async flows.

Other combinations:

Request-Reply # Used for synchronous scenarios, not async.

WS Standard # Not the correct configuration for async reliability in CPI SOAP adapter.

Thus, correct async configuration is: One-Way + Robust.

질문 # 28

Which of the following are markup languages that you can use to describe APIs? Note: There are 2 correct answers to this question.

- A. OpenAPI
- B. HTML
- C. RAML
- D. CXML

정답: A,C

설명:

RAML and OpenAPI are markup languages that you can use to describe APIs. RAML stands for RESTful API Modeling Language and is based on YAML. OpenAPI is a specification for describing RESTful APIs and is based on JSON or YAML. Both languages allow you to define the structure, parameters, responses, and documentation of your APIs. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

질문 # 29

What does an API consumer do?

- A. It provides an interface.
- B. It invokes an interface.
- C. It provides the server-side implementation of an interface.

정답: B

설명:

An API consumer is an application or system that invokes an interface provided by an API provider. An API consumer uses the interface to access or manipulate data or functionality exposed by the API provider. An API consumer can be a web browser, a mobile app, a cloud service, or any other client that can send requests and receive responses from an API provider. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

질문 # 30

Which combination of SAP BTP role collections allows a user to manage queues and topic subscriptions in SAP Event Mesh, and monitor its usage and resources?

- A. SecurityAdmin and SecurityDevelop
- **B. EventMeshAdmin and EventMeshDevelop**
- C. ApplicationAdmin and ApplicationDevelop
- D. IntegrationAdmin and IntegrationDevelop

정답: B

설명:

In SAP BTP, SAP Event Mesh provides messaging capabilities (queues, topics, and subscriptions) that require specific role collections to enable developers and administrators to perform tasks. SAP delivers two dedicated role collections for Event Mesh: EventMeshDeveloper:

Manages queues and topic subscriptions

Monitors Event Mesh and its queues

Performs testing of queues and message flows

EventMeshAdmin:

Includes all developer capabilities

Provides additional administration rights for lifecycle management of Event Mesh instances and configurations When a user is assigned these role collections, they gain the ability to:

Create and manage queues and topic subscriptions.

Monitor usage and resources such as queue depth, consumers, connections, and spool size within Event Mesh.

Other provided options are incorrect:

ApplicationAdmin/ApplicationDevelop # These are not SAP Event Mesh role collections, they do not provide queue or topic subscription access.

SecurityAdmin/SecurityDevelop # These roles are tied to security configurations and do not allow Event Mesh operations.

IntegrationAdmin/IntegrationDevelop # These roles belong to SAP Integration Suite (Cloud Integration) capability, not Event Mesh. Therefore, the correct and verified answer according to SAP Integration Developer documentation is:

B). EventMeshAdmin and EventMeshDevelop

질문 # 31

What do you use in an integration flow to handle unexpected errors?

- **A. Exception-handling subprocesses**
- B. Status code checks
- C. Exception handler integration flow elements
- D. Try-catch subprocesses

정답: A

설명:

In SAP Cloud Integration (part of Integration Suite), error handling within integration flows is implemented using:

Exception Subprocesses # Dedicated subprocesses triggered by an Error Start Event to handle unexpected runtime exceptions. These allow logging, error notifications, or compensating logic.

Other options:

Try-Catch subprocesses # Not a modeling construct in SAP CPI.

Exception handler integration flow elements # Not a standard artifact; error handling is done with exception subprocesses.

Status code checks # Useful for response validation but not full error handling.

Thus, the correct answer is Exception-handling subprocesses.
