Quiz Professional Splunk - Exam SPLK-1002 Introduction

Our SPLK-1002 free demo provides you with the free renewal in one year so that you can keep track of the latest points happening

in the world. As the questions of exams of our SPLK-1002 exam torrent are more or less involved with heated issues and customers who prepare for the exams must haven't enough time to keep trace of exams all day long, our SPLK-1002 Practice Test can serve as a conducive tool for you make up for those hot points you have ignored. Therefore, you will have more confidence in passing the exam, which will certainly increase your rate to pass the SPLK-1002 exam.

Splunk SPLK-1002 is an advanced certification exam designed for professionals who have extensive experience in using Splunk Core. SPLK-1002 exam tests the knowledge, skills, and abilities of a candidate to perform complex searches, create reports, and manage Splunk indexes. Splunk Core Certified Power User Exam certification is awarded by Splunk, a leading provider of data analytics and security software solutions.

Splunk Core Certified Power User Exam Sample Questions (Q190-Q195):

NEW QUESTION # 190
Which function should you use with the transaction command to set the maximum total time between the earliest and latest events returned?

- A. maxduration
- B. maxpause
- C. maxspan
- D. endswith

Answer: C

NEW QUESTION # 191
Given the macro definition below, what should be entered into the Name and Arguments fileds to correctly configured the macro?

- A. The macro name is sessiontracker and the arguments are $action$, $JESSIONID$.
- B. The macro name is sessiontracker and the arguments are action, JESSIONID.
- C. The macro name is sessiontracker(2) and the arguments are action, JESSIONID.
- D. The macro name is sessiontracker(2) and the Arguments are $action$, $JESSIONID$.

Answer: C

Explanation:
Reference: https://docs.splunk.com/Documentation/Splunk/8.0.3/Knowledge/Definesearchmacros The macro definition below shows a macro that tracks user sessions based on two arguments: action and JSESSIONID.
sessiontracker(2)
The macro definition does the following:
It specifies the name of the macro as sessiontracker. This is the name that will be used to execute the macro in a search string.
It specifies the number of arguments for the macro as 2. This indicates that the macro takes two arguments when it is executed.
It specifies the code for the macro as index=main sourcetype=access_combined_wcookie action=$action$ JSESSIONID=$JSESSIONID$ | stats count by JSESSIONID. This is the search string that will be run when the macro is executed. The search string can contain any part of a search, such as search terms, commands, arguments, etc. The search string can also include variables for the arguments using dollar signs around them.
In this case, action and JSESSIONID are variables for the arguments that will be replaced by their values when the macro is executed.
Therefore, to correctly configure the macro, you should enter sessiontracker as the name and action, JSESSIONID as the arguments. Alternatively, you can use sessiontracker(2) as the name and leave the arguments blank.

NEW QUESTION # 192
What does the following search do?

- A. Creates a table of the total count of mysterymeat corndogs split by user.
- B. Creates a table that groups the total number of users by vegetarian corndogs.
- C. Creates a table with the count of all types of corndogs eaten split by user.
- D. Creates a table of the total count of users and split by corndogs.

Answer: A

Explanation:
Explanation
The search string below creates a table of the total count of mysterymeat corndogs split by user.
| stats count by user | where corndog=mysterymeat
The search string does the following:
It uses the stats command to calculate the count of events for each value of the user field. The stats command creates a table with two columns: user and count.
It uses the where command to filter the results by the value of the corndog field. The where command only keeps the rows where corndog equals mysterymeat.
Therefore, the search string creates a table of the total count of mysterymeat corndogs split by user.

NEW QUESTION # 193
Which of the following statements about calculated fields in Splunk is true?

- A. Calculated fields can only be used in dashboards.
- B. Calculated fields can only be used in saved reports.
- C. Calculated fields cannot be chained together to create more complex fields
- D. Calculated fields can be chained together to create more complex fields.

Answer: D

Explanation:
The correct answer is B. Calculated fields can be chained together to create more complex fields.
Calculated fields are fields that are added to events at search time by using eval expressions. They can be used to perform calculations with the values of two or more fields already present in those events. Calculated fields can be defined with Splunk Web or in the props.conf file. They can be used in searches, reports, dashboards, and data models like any other extracted field1.
Calculated fields can also be chained together to create more complex fields. This means that you can use a calculated field as an input for another calculated field. For example, if you have a calculated field named total that sums up the values of two fields named price and tax, you can use the total field to create another calculated field named discount that applies a percentage discount to the total field. To do this, you need to define the discount field with an eval expression that references the total field, such as:
discount = total * 0.9
This will create a new field named discount that is equal to 90% of the total field value for each event2.

NEW QUESTION # 194
Which delimiters can the Field Extractor (FX) detect? (select all that apply)

- A. Pipes
- B. Commas
- C. Spaces
- D. Tabs

Answer: A,B,C

Explanation:
Reference:https://docs.splunk.com/Documentation/Splunk/8.0.3/Knowledge/FXSelectMethodstep
The Field Extractor (FX) is a tool that helps you extract fields from your data using delimiters or regular expressions. Delimiters are characters or strings that separate fields in your data. The FX can detect some common delimiters automatically, such as pipes (|), spaces ( ), commas (,), semicolons (;), etc. The FX cannot detect tabs (\t) as delimiters automatically, but you can specify them manually in the FX interface.

NEW QUESTION # 195
.....

In accordance with the actual exam, we provide the latest SPLK-1002 exam dumps for your practices. With the latest SPLK-1002

test questions, you can have a good experience in practicing the test. Moreover, you have no need to worry about the price, we provide free updating for one year and half price for further partnerships, which is really a big sale in this field. After your payment, we will send the updated SPLK-1002 Exam to you immediately and if you have any question about updating, please leave us a message.
