

Get Unparalleled New NCP-MCI-6.10 Test Test and Fantastic New NCP-MCI-6.10 Test Online

2026 Latest Pass4SureQuiz NCP-MCI-6.10 PDF Dumps and NCP-MCI-6.10 Exam Engine Free Share:
<https://drive.google.com/open?id=12woa0UtfNkmFpY7w9WmpPc2w74iC6Z6B>

It is a popular belief that only professional experts can be the leading one to do some adept job. And similarly, only high quality and high accuracy NCP-MCI-6.10 exam questions like ours can give you confidence and reliable backup to get the certificate smoothly because our experts have extracted the most frequent-tested points for your reference. Our NCP-MCI-6.10 exam questions generally raised the standard of practice materials in the market with the spreading of higher standard of knowledge in this area. So your personal effort is brilliant but insufficient to pass the Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) exam and our NCP-MCI-6.10 Test Guide can facilitate the process smoothly & successfully. Our Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) practice materials are successful by ensuring that what we delivered is valuable and in line with the syllabus of this exam.

Nutanix NCP-MCI-6.10 Exam Syllabus Topics:

Topic	Details

Topic 1	• Configure Disaster Recovery and Data Protection within a Nutanix Multicloud Environment: This section of the exam measures the skills of Disaster Recovery Specialists and Cloud Engineers and covers configuring protection policies and domains for data security and recovery. Candidates need to identify the right entities for protection, schedule backups, define retention policies, and set up replication to remote sites. Recovery plans must be configured and executed with proper scripting, network mapping, and failover strategies. Metro replication requires understanding failover methodologies, comparing solutions on different hypervisors, and preventing split-brain scenarios. Effective disaster recovery planning ensures minimal downtime and data integrity across environments.
Topic 2	• Manage VMs within a Nutanix Multicloud Environment: This section of the exam measures the skills of Cloud Administrators and Virtualization Engineers and covers managing virtual machines (VMs) within a Nutanix multicloud environment. It includes creating and updating VMs by determining hardware requirements, boot modes, sizing, and configuration based on application needs. Candidates must understand how to deploy VMs using templates, snapshots, and image configurations, ensuring the correct formats for importing and exporting VMs. Migration processes require knowledge of prerequisites, storage, network settings, and software compatibility. Additionally, configuring VM categories and attributes is essential for proper organization and management within the environment, ensuring alignment with labels, storage policies, and security settings.
Topic 3	• Manage Clusters within a Nutanix Multicloud Environment: This section of the exam measures the skills of Infrastructure Engineers and Systems Administrators and covers the administration of Nutanix clusters. Storage management includes creating, reading, updating, and deleting storage containers and volume groups. Configuring AOS and Prism Central settings involves authentication, SSL certificate management, IAM role-based access control, and configuring network segmentation. Network administration procedures focus on creating VLAN-backed subnets, virtual switches, and load-balancing policies while monitoring NIC usage. Lifecycle management includes performing hardware and software updates and maintaining firmware. Hardware maintenance involves adding or removing nodes and physical disks while ensuring proper upgrades and replacements. Intelligent operations require configuring capacity policies, discovering application relationships, and simulating scenarios to optimize performance.
Topic 4	• Troubleshoot a Nutanix Multicloud Environment: This section of the exam measures the skills of Technical Support Engineers and IT Operations Specialists and covers diagnosing and resolving common issues within a Nutanix multi-cloud environment. Troubleshooting protection policies and recovery plans requires identifying network mapping failures, vNIC issues, script execution problems, and connectivity failures. Metro replication troubleshooting involves addressing naming conventions, network limitations, and replication states. Security issues in AOS and Prism Central must be resolved by managing CVM communications, security warnings, and log analysis. LCM operations require diagnosing failures in inventory updates and version upgrades. Performance troubleshooting involves analyzing logs, reading performance charts, and adjusting VM configurations to meet performance needs.
Topic 5	• Conduct Custom Monitoring within a Nutanix Multicloud Environment: This section of the exam measures the skills of Cloud Analysts and Systems Engineers and covers custom monitoring for optimized performance management. Candidates must analyze performance charts, set retention policies, create custom service level agreements (SLAs), and manage storage based on policies. Creating reports involves identifying the required type, selecting generation frequency, determining retention properties, and customizing report formats for different monitoring needs. Effective monitoring ensures better resource utilization, system efficiency, and proactive issue resolution within the multi-cloud environment.

Place Your Order Today and Get Free Nutanix NCP-MCI-6.10 Questions Updates

Pass4SureQuiz offers you a full refund if you are not able to pass the NCP-MCI-6.10 certification exams after preparing with our products. The high quality of NCP-MCI-6.10 certification exam preparation products increases your success probability and

reduces the chances of failure. The NCP-MCI-6.10 exam preparation products contain all the features to make you ready for embracing success in a first attempt. These NCP-MCI-6.10 Exam Preparation products are updated regularly for guaranteed success. Free demo is also offered to the users for checking the NCP-MCI-6.10 exam preparation products quality.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI v6.10) Sample Questions (Q153-Q158):

NEW QUESTION # 153

An administrator needs to modify an AHV VM to support a large number of concurrent network connections.

The VM has:

- * 4 vCPUs
- * 20 GB RAM
- * OS: Microsoft Windows Server 2022

Which modification can improve network performance for network I/O-intensive applications?

- A. Add more RAM.
- B. Add more vCPUs.
- C. **Enable RSS VirtIO-Net Multi-Queue.**
- D. Enable AHV Turbo Technology.

Answer: C

Explanation:

Receive Side Scaling (RSS) VirtIO-Net Multi-Queue improves network performance by distributing network processing across multiple CPU cores.

* Option C (Enable RSS VirtIO-Net Multi-Queue) is correct:

* This setting reduces CPU bottlenecks by allowing multiple queues to handle network packets.

* It is essential for high-throughput network applications.

* Option A (Add more vCPUs) is incorrect:

* CPU resources are important, but without enabling RSS, additional vCPUs will not optimize network traffic distribution.

* Option B (Enable AHV Turbo Technology) is incorrect:

* AHV Turbo improves disk I/O, not network I/O.

* Option D (Add more RAM) is incorrect:

* RAM does not directly impact network performance.

References:

Nutanix AHV Best Practices Guide #Optimizing Network Performance with RSS Multi-Queue Nutanix KB #Enabling Multi-Queue for High-Performance Applications

NEW QUESTION # 154

Due to requirements from the network team, a Nutanix administrator must create User VMs on VLAN 10 on multiple AHV clusters.

What network configuration should the administrator consider in order to ensure consistent connectivity for User VMs on VLAN 10?

- A. Bond Type
- B. **Virtual Switch Configuration**
- C. MAC Address Prefix
- D. MTU

Answer: B

NEW QUESTION # 155

An administrator needs to create a single chart showing multiple storage bandwidth metrics a VM is consuming.

Which type of chart should the administrator create?

- A. **Entity Chart**
- B. Hypervisor Performance Chart
- C. VM Summary Chart

- D. Metric Chart

Answer: A

Explanation:

Entity Charts in Nutanix Prism Central allow multiple metrics from a single entity (e.g., VM, storage container) to be displayed on a single graph.

* Option B (Entity Chart) is correct:

* This allows the administrator to track multiple performance metrics (e.g., read/write bandwidth, IOPS) for a specific VM.

* Option A (Metric Chart) is incorrect:

* Metric Charts track a single metric across multiple entities, which does not meet the requirement of displaying multiple metrics for a single VM.

* Option C (Hypervisor Performance Chart) is incorrect:

* Hypervisor Performance Chart tracks host-level metrics, not VM-specific bandwidth metrics.

* Option D (VM Summary Chart) is incorrect:

* VM Summary Chart only provides an overview and does not support custom multi-metric tracking.

References:

Nutanix Prism Central Guide#Entity vs. Metric Charts for Performance Analysis
Nutanix KB#Creating Custom Charts in Prism Central

NEW QUESTION # 156

An administrator needs to perform an LCM upgrade on an AHV host with GPUs.

What additional step is required before upgrading the host?

- **A. Use Direct Uploads to upload appropriate driver bundles.**
- B. Update NCC to the latest version and re-run Inventory.
- C. Run LCM in dark site mode so it can update AHV independently.
- D. Create an agent VM on each host that has GPU drivers installed.

Answer: A

Explanation:

Upgrading an AHV host with GPUs requires that the correct GPU drivers be manually uploaded to LCM, as GPU firmware is not updated automatically.

* Option C (Use Direct Uploads to upload appropriate driver bundles) is correct:

* LCM does not automatically fetch GPU drivers.

* The administrator must download and manually upload the appropriate firmware bundle before upgrading.

* Option A is incorrect:

* Agent VMs are not required for GPU updates.

* Option B is incorrect:

* Running LCM in dark site mode does not impact GPU firmware updates.

* Option D is incorrect:

* Updating NCC is a best practice but does not resolve GPU driver issues.

References:

* Nutanix LCM Guide#Manually Uploading GPU Firmware Bundles

* Nutanix KB#Updating AHV Hosts with GPUs

NEW QUESTION # 157

An administrator needs to create a storage container for VM disks. The container must meet the following conditions:

* 10 GiB of the total allocated space must not be used by other containers.

* The container must have a maximum storage capacity of 500 GiB.

What settings should the administrator configure while creating the storage container?

- A. Set Advertised Capacity to 10 GiB.
- B. Set Reserved Capacity to 500 GiB.
- C. Set Advertised Capacity to 10 GiB and Reserved Capacity to 500 GiB.
- **D. Set Reserved Capacity to 10 GiB and Advertised Capacity to 500 GiB.**

Answer: D

Explanation:

Nutanix storage containers allow administrators to configure capacity reservations and advertised limits for better resource management.

* Option D (Set Reserved Capacity to 10 GiB and Advertised Capacity to 500 GiB) is correct:

* Reserved Capacity ensures that 10 GiB is always available for this container and not consumed by other containers.

* Advertised Capacity defines a logical limit of 500 GiB to prevent over-allocation.

* Option A is incorrect:

* Advertised Capacity of 10 GiB is too low and does not match the requirement of a 500 GiB storage container.

* Option B is incorrect:

* Only setting Advertised Capacity does not guarantee Reserved Capacity, meaning other containers could consume the reserved space.

* Option C is incorrect:

* Setting only Reserved Capacity does not enforce an upper limit, which could lead to overprovisioning.
