BTW, DOWNLOAD part of Easy4Engine CDPSE dumps from Cloud Storage: <https://drive.google.com/open?id=1KGaU1WQShi07ESOWdga89bMBotsk5ZOE>

The Easy4Engine guarantees their customers that if they have prepared with ISACA CDPSE practice test, they can pass the ISACA CDPSE certification easily. If the applicants fail to do it, they can claim their payment back according to the terms and conditions. Many candidates have prepared from the actual ISACA CDPSE Practice Questions and rated them as the best to study for the examination and pass it in a single try with the best score.

If you can possess the certification, your competitive force in the job market will be improved, and you can also improve your salary. CDPSE exam dumps can help you pass the exam and obtain the certification successfully. With a professional team to edit and verify, CDPSE exam materials are high quality and accuracy. In addition, we offer you free demo to have a try, so that you can know what the complete version is like. We have online and offline chat service, and the service staff possess the professional knowledge for CDPSE Exam Materials, if you have any questions, you can consult us.

## Guide CDPSE Torrent - CDPSE Latest Braindumps Ppt

Some sites provide ISACA CDPSE Exam study materials on the Internet, but they do not have any reliable guarantee. Let me be clear here a core value problem of Easy4Engine. All ISACA exams are very important. In this era of rapid development of information technology, Easy4Engine just questions provided by one of them. Why do most people choose Easy4Engine? This is because the exam information provided by Easy4Engine will certainly be able to help you pass the exam. Why? Because it provides the most up-to-date information, which is the majority of candidates proved by practice.

## ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q89-Q94):

### NEW QUESTION # 89

Which of the following should an IT privacy practitioner do FIRST before an organization migrates personal data from an on-premise solution to a cloud-hosted solution?

- A. Perform a privacy impact assessment (PIA).
- B. Ensure strong encryption is used.
- C. Develop and communicate a data security plan.
- D. Conduct a security risk assessment.

**Answer: A**

Explanation:  
Explanation

The first thing that an IT privacy practitioner should do before an organization migrates personal data from an on-premise solution to a cloud-hosted solution is to perform a privacy impact assessment (PIA). A PIA is a systematic process of identifying and evaluating the potential privacy risks and impacts of a data processing activity or system. A PIA helps to ensure that privacy is considered and integrated into the design and development of data processing activities or systems, and that privacy risks are mitigated or eliminated. A PIA also helps to determine the appropriate measures to protect personal data in a cloud-hosted solution, such as encryption, pseudonymization, anonymization, access control, audit trail, breach notification, etc. A PIA also helps to comply with the applicable privacy regulations and standards that govern data processing activities in a cloud-hosted solution. #### NEW QUESTION # 90

Which of the following system architectures BEST supports anonymity for data transmission?

- A. Plug-in-based
- B. Front-end
- C. Client-server
- D. Peer-to-peer

**Answer: D**

Explanation:

A peer-to-peer (P2P) system architecture is a network model where each node (peer) can act as both a client and a server, and communicate directly with other peers without relying on a centralized authority or intermediary. A P2P system architecture best supports anonymity for data transmission, by providing the following advantages:

It can hide the identity and location of the peers, by using encryption, pseudonyms, proxies, or onion routing techniques, such as Tor1 or I2P2. These techniques can prevent eavesdropping, tracking, or censorship by third parties, such as Internet service providers, governments, or hackers.

It can distribute the data across multiple peers, by using hashing, replication, or fragmentation techniques, such as BitTorrent3 or IPFS4. These techniques can reduce the risk of data loss, corruption, or tampering by malicious peers, and increase the availability and resilience of the data.

It can enable the peers to control their own data, by using consensus, validation, or incentive mechanisms, such as blockchain5 or smart contracts. These mechanisms can ensure the integrity and authenticity of the data transactions, and enforce the privacy policies and preferences of the data owners.

#### NEW QUESTION # 91

Which of the following is the BEST control to detect potential internal breaches of personal data?

- A. Classification of data
- B. Employee background Checks
- C. Data loss prevention (DLP) systems
- D. User behavior analytics tools

**Answer: D**

Explanation:

User behavior analytics tools are the best control to detect potential internal breaches of personal data because they monitor and analyze the activities and patterns of users on the network and systems, and alert or block any anomalous or suspicious behavior that may indicate unauthorized access, misuse or exfiltration of personal data. Data loss prevention (DLP) systems, employee background checks and classification of data are useful controls to prevent or mitigate internal breaches of personal data, but they do not necessarily detect them.

#### NEW QUESTION # 92

As part of a major data discovery initiative to identify personal data across the organization, the project team has identified the proliferation of personal data held as unstructured data as a major risk. What should be done FIRST to address this situation?

- A. Identify who has access to sensitive unstructured data.
- B. Assign an owner to sensitive unstructured data.
- **C. Identify sensitive unstructured data at the point of creation.**
- D. Classify sensitive unstructured data.

**Answer: C**

#### NEW QUESTION # 93

Which of the following is the PRIMARY reason for an organization to use hash functions when hardening application systems involved in biometric data processing?

- A. To prevent possible identity theft
- B. To ensure technical security measures are effective
- C. To meet the organization's security baseline
- **D. To reduce the risk of sensitive data breaches**

**Answer: D**

Explanation:

Explanation

The primary reason for an organization to use hash functions when hardening application systems involved in biometric data processing is to reduce the risk of sensitive data breaches, because hash functions are one-way mathematical functions that transform biometric data into a unique and irreversible representation that cannot be reconstructed or reversed. This means that even if an attacker gains access to the hashed biometric data, they cannot use it to identify or impersonate the individual. Hash functions also help preserve the privacy and confidentiality of biometric data by preventing unauthorized access, modification, or disclosure.

#### NEW QUESTION # 94

.....

Only if you download our software and practice no more than 30 hours will you attend your test confidently. Because our CDPSE exam torrent can simulate limited-timed examination and online error correcting, it just takes less time and energy for you to prepare the CDPSE exam than other study materials. As is known to us, maybe you are a worker who is busy in your career. Therefore, purchasing the CDPSE Guide Torrent is the best and wisest choice for you to prepare your test. If you buy our CDPSE questions torrent, the day of regretting will not come anymore.

**Guide CDPSE Torrent:** <https://www.easy4engine.com/CDPSE-test-engine.html>

All the language used in CDPSE study materials is very simple and easy to understand, Employee evaluations take products' quality and passing rate in to consideration so that every CDPSE test engine should be high quality and high passing rate, ISACA CDPSE Latest Exam Guide Missing the chance, I am sure you must regret it, ISACA CDPSE Latest Exam Guide Come and check the free demo in our website you won't regret it.

Extend Nginx with Lua scripts, All C# examples and source code presented in this book, All the language used in CDPSE Study Materials is very simple and easy to understand.

Employee evaluations take products' quality and passing rate in to consideration so that every CDPSE test engine should be high quality and high passing rate.
