

# Valid PCCP Exam Bootcamp - 100% Excellent Questions Pool

2026 Latest Test4Engine PCCP PDF Dumps and PCCP Exam Engine Free Share: <https://drive.google.com/open?id=1TsUojgymvPQg0qaTCEgrdcmYpQ2u5fjA>

We have gained high appraisal for the high quality PCCP guide question and considerate serves. All content is well approved by experts who are arduous and hardworking to offer help. They eliminate banal knowledge and exam questions out of our PCCP real materials and add new and essential parts into them. And they also fully analyzed your needs of PCCP exam dumps all the time. Our after sales services are also considerate. If you get any questions with our PCCP guide question, all helps are available upon request. Once you place your order this time, you will enjoy and experience comfortable and convenient services immediately. Besides, we do not break promise that once you fail the PCCP Exam, we will make up to you and relieve you of any loss. Providing with related documents, and we will give your money back. We have been always trying to figure out how to provide warranty service if customers have questions with our PCCP real materials. So all operations are conducted to help you pass the exam with efficiency.

We are determined to give hand to the candidates who want to pass their PCCP exam smoothly and with ease by their first try. Our professional experts have compiled the most visual version of our PCCP practice materials: the PDF version, which owns the advantage of convenient to be printed on the paper. Besides, you can take notes on it whenever you think of something important. The PDF version of our PCCP study quiz will provide you the most flexible study experience to success.

## PCCP Prep Guide is Closely Related with the Real PCCP Exam - Test4Engine

Our PCCP real study guide materials can help you get better and better reviews. This is a very intuitive standard, but sometimes it is not enough comprehensive, therefore, we need to know the importance of getting the test PCCP certification, qualification certificate for our future job and development is an important role. Only when we have enough qualifications to prove our ability can we defeat our opponents in the harsh reality. We believe our PCCP actual question will help you pass the PCCP qualification examination and get your qualification faster and more efficiently.

## Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q161-Q166):

### NEW QUESTION # 161

Which method is used to exploit vulnerabilities, services, and applications?

- A. encryption
- B. port scanning
- C. port evasion
- D. DNS tunneling

**Answer: C**

Explanation:

Attack communication traffic is usually hidden with various techniques and tools, including:

# Encryption with SSL, SSH (Secure Shell), or some other custom or proprietary encryption

# Circumvention via proxies, remote access tools, or tunneling. In some instances, use of cellular networks enables complete circumvention of the target network for attack C2 traffic.

# Port evasion using network anonymizers or port hopping to traverse over any available open ports

# Fast Flux (or Dynamic DNS) to proxy through multiple infected endpoints or multiple, ever-changing C2 servers to reroute traffic and make determination of the true destination or attack source difficult

# DNS tunneling is used for C2 communications and data infiltration

### NEW QUESTION # 162

When signature-based antivirus software detects malware, what three things does it do to provide protection? (Choose three.)

- A. remove the infected file's extension
- B. delete the infected file
- C. quarantine the infected file
- D. alert system administrators
- E. decrypt the infected file using base64

**Answer: B,C,D**

Explanation:

Signature-based antivirus software is a type of security software that uses signatures to identify malware.

Signatures are bits of code that are unique to a specific piece of malware. When signature-based antivirus software detects a piece of malware, it compares the signature to its database of known signatures<sup>12</sup>. If a match is found, the software can do three things to provide protection:

\* Alert system administrators: The software can notify the system administrators or the users about the malware detection, and provide information such as the name, type, location, and severity of the malware. This can help the administrators or the users to take appropriate actions to prevent further damage or infection<sup>3</sup>.

\* Quarantine the infected file: The software can isolate the infected file from the rest of the system, and prevent it from accessing or modifying any other files or processes. This can help to contain the malware and limit its impact on the system<sup>4</sup>.

\* Delete the infected file: The software can remove the infected file from the system, and prevent it from running or spreading. This can help to eliminate the malware and restore the system to a clean state<sup>4</sup>.

What is a signature-based antivirus? - Info Exchange

What is a Signature and How Can I detect it? - Sophos

How Does Heuristic Analysis Antivirus Software Work?

What Is Signature-based Malware Detection? | RiskXchange

### NEW QUESTION # 163

Which two statements describe the Jasager attack? (Choose two.)

- A. # It actively responds to beacon requests.
- B. # It tries to get victims to connect at random
- C. # The victim must manually choose the attacker's access point

- D. # The attacker needs to be within close proximity of the victim.

**Answer: A,D**

Explanation:

A Jasager attack is a type of wireless man-in-the-middle attack that exploits the way mobile devices search for known wireless networks. A Jasager device will respond to any beacon request from a mobile device by saying "Yes, I'm here", pretending to be one of the preferred networks. This way, the Jasager device can trick the mobile device into connecting to it, without the user's knowledge or consent. The Jasager device can then intercept, modify, or redirect the traffic of the victim. For this attack to work, the attacker needs to be within close proximity of the victim, and the victim must have at least one known network in their preferred list. The victim does not need to manually choose the attacker's access point, nor does the attacker try to get victims to connect at random. #### **NEW QUESTION # 164**

Which technique changes protocols at random during a session?

- A. tunneling within commonly used services
- B. port hopping
- C. hiding within SSL encryption
- D. use of non-standard ports

**Answer: B**

Explanation:

Port hopping is a technique that changes protocols at random during a session to evade detection and analysis by security devices. Port hopping can be used by malware or attackers to communicate with command and control servers or to exfiltrate data. Port hopping makes it difficult to identify and block malicious traffic based on port numbers or signatures. #### **NEW QUESTION # 165**

What differentiates SOAR from SIEM?

- A. SOAR platforms filter alerts with their broader coverage of security incidents.
- B. SOAR platforms focus on analyzing network traffic.
- C. SOAR platforms integrate automated response into the investigation process.
- D. SOAR platforms collect data and send alerts.

**Answer: C**

Explanation:

SOAR (Security Orchestration, Automation, and Response) differs from SIEM by adding automated incident response and workflow orchestration to the detection and alerting capabilities found in SIEM. This enables faster and more efficient handling of security incidents.
