Free Sample C_CPI_2506 Questions - Exam C_CPI_2506 Passing Score

To keep pace with the times, we believe science and technology can enhance the way people study. Especially in such a fast-paced living tempo, we attach great importance to high-efficient learning. Therefore, our C_CPI_2506 study materials base on the past exam papers and the current exam tendency, and design such an effective simulation function to place you in the real exam environment. We promise to provide a high-quality simulation system with advanced C_CPI_2506 Study Materials. With the simulation function, our C_CPI_2506 training guide is easier to understand and pass the C_CPI_2506 exam.

SAP C_CPI_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.

Topic 2	<ul style="list-style-type: none"> • SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.
Topic 3	<ul style="list-style-type: none"> • Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 4	<ul style="list-style-type: none"> • SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.

SAP Certified Associate - Integration Developer Sample Questions (Q40-Q45):

NEW QUESTION # 40

What does the messaging model of the Apache Camel Data Model consist of?

- A. Header, Exchange ID, in-message
- B. Header, properties, attachment
- C. Header, body, properties
- D. Header, body, attachment

Answer: C

Explanation:

The Apache Camel Data Model, which underpins SAP Cloud Integration's message processing model, consists of Header # Metadata about the message (e.g., content type, correlation IDs).

Body # Main payload of the message.

Properties # Exchange-level metadata, persisted throughout processing but not transferred with the message.

Other options mix in elements like attachments or exchange IDs, but the standard messaging model is header, body, properties.

NEW QUESTION # 41

What is the most crucial factor for ensuring robust security in the integration of this SAP landscape, while maintaining optimal performance and scalability?

- A. Implementing a well-defined security architecture that encompasses authentication, authorization, and data encryption.
- B. Employing a highly skilled security team with extensive SAP experience.
- C. Centralizing all SAP system administration to a single, highly secure data center.
- D. Prioritizing the latest SAP security patches above all other considerations.

Answer: A

Explanation:

For robust security in SAP integration landscapes:

A security architecture must cover:

Authentication # Verifying the identity of users/systems (OAuth 2.0, SAML, certificates).

Authorization # Role-based access control.

Encryption # TLS/SSL for data in transit, strong encryption for data at rest.

This ensures end-to-end security without sacrificing performance or scalability.

Other options:

Skilled teams and security patches are important but are operational measures, not the foundation of integration security.

Centralizing system administration is organizational, not architectural.

Thus, the key is a well-defined security architecture.

NEW QUESTION # 42

From which of the following can you create an API proxy directly? Note: There are 2 correct answers to this question.

- A. Open Connectors
- B. Source URL
- C. S/4HANA API
- D. API provider

Answer: B,D

Explanation:

In SAP API Management (part of Integration Suite), an API Proxy acts as a facade for a backend service. You can create an API proxy directly from:

API Provider # An API provider represents the backend system (e.g., SAP S/4HANA, SAP Gateway, third-party services). Proxies can be generated from these providers.

Source URL # You can directly specify the backend system's endpoint URL, and an API proxy will be generated from it.

Other options:

Open Connectors # Provides harmonized APIs to third-party apps (e.g., Salesforce, HubSpot), but you don't create proxies directly from them.

S/4HANA API # While S/4HANA APIs can be exposed, they are typically accessed via an API Provider or URL, not directly listed as a creation source.

NEW QUESTION # 43

What is Representational State Transfer (REST)?

- A. An application protocol
- B. A description language for APIs
- C. A message protocol
- D. An architectural style

Answer: D

Explanation:

Representational State Transfer (REST) is an architectural style for designing web services that are based on the stateless exchange of resources. REST uses uniform and predefined methods, such as GET, POST, PUT, and DELETE, to manipulate resources identified by URIs. REST also supports different formats for data representation, such as XML, JSON, or plain text. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 44

For which of the following scenarios can you use scripting in an integration flow?

- A. Add information to the message log.
- B. Configure an OData adapter.
- C. Create XSLT mapping artifacts.

Answer: A

Explanation:

In SAP Cloud Integration (part of Integration Suite), scripting (Groovy, JavaScript) is supported in integration flows to handle custom logic that cannot be achieved by standard adapters or mappings. Example use cases:

Enriching messages with dynamic values.

Adding custom log entries into the Message Processing Log.

Custom validation, conversions, or calculations.

Other options:

A). Create XSLT mapping artifacts # Achieved via XSLT, not scripting.

C). Configure an OData adapter # Done via adapter configuration, not scripting.

Thus, scripting is used for runtime logic enhancements like adding information to the message log.

NEW QUESTION # 45

.....

Now you do not need to worry about the relevancy and top standard of PassCollection SAP Certified Associate - Integration Developer (C_CPI_2506) exam questions. These SAP C_CPI_2506 dumps are designed and verified by qualified C_CPI_2506 exam trainers. Now you can trust PassCollection SAP C_CPI_2506 Practice Questions and start preparation without wasting further time. With the C_CPI_2506 exam questions you will get everything that you need to learn, prepare and pass the challenging C_CPI_2506 exam with good scores.
