Topic 5	<ul style="list-style-type: none"> <li>Advanced Topics: Troubleshooting configuration issues, diagnosing system integration problems, and resolving deployment obstacles.</li> </ul>

## Salesforce Order Management Administrator Accredited Professional Sample Questions (Q30-Q35):

### NEW QUESTION # 30

A user wants to review credit card payment data for a specific Order. Which object should the employee navigate to?

- A. Payment
- B. Order Payment Summary**
- C. Payment Method
- D. Order

**Answer: B**

Explanation:

The object that the user should navigate to to review credit card payment data for a specific Order is Order Payment Summary. An Order Payment Summary is a record that represents a payment made for an order or part of an order. An Order Payment Summary has a lookup relationship to both Order Summary and Invoice objects, and it contains information such as the payment amount, method, status, etc. Verified Reference: [https://help.salesforce.com/s/articleView?id=sf.order\\_management\\_order\\_payment\\_summary.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.order_management_order_payment_summary.htm&type=5)

### NEW QUESTION # 31

What can an administrator use to control what inventory is exposed on specific selling channels?

- A. Selling Channel Flag
- B. Selling Channel Status
- C. Product Filter Status
- D. Product Eligibility Flag**

**Answer: D**

Explanation:

The Product Eligibility Flag is a custom field on the Product object that indicates whether a product is eligible for a specific selling channel. An administrator can use this field to control what inventory is exposed on different channels, such as web, mobile, or store. For example, if a product has the Product Eligibility Flag set to Web Only, it will not be available for other channels. Reference: Order Management Objects, [Product Eligibility Flag]

### NEW QUESTION # 32

A developer is creating a flow to generate Fulfillment Orders for Order Summaries. What object is used to generate the Fulfillment Groups?

- A. Products
- B. Fulfillment Summaries
- C. Order Fulfillment Summaries
- D. Order Product Summaries**

**Answer: D**

### NEW QUESTION # 33

What are two ways an administrator can query Order Summaries using APIs in Workbench?

- A. Platform API
- B. Composite API
- C. Invocable API
- D. Apex API
- E. Connect API

**Answer: A,B**

Explanation:

Two ways that an administrator can query Order Summaries using APIs in Workbench are:

Platform API. The Platform API is a set of REST and SOAP APIs that allow developers to access data and functionality in Salesforce from external systems. The Platform API includes various resources and operations for querying, creating, updating, or deleting records in Salesforce, such as Order Summaries. The administrator can use the Platform API in Workbench by selecting the REST Explorer or SOAP Explorer tabs, and entering the appropriate request URL and parameters.

Composite API. The Composite API is a type of REST API that allows developers to execute multiple subrequests in a single HTTP request. The Composite API includes various resources and operations for batching, tree, sObject collections, or transactions in Salesforce, such as Order Summaries. The administrator can use the Composite API in Workbench by selecting the REST Explorer tab, and entering the appropriate request URL and JSON body.

[https://developer.salesforce.com/docs/atlas.en-us.api\\_rest.meta/api\\_rest/resources\\_composite.htm](https://developer.salesforce.com/docs/atlas.en-us.api_rest.meta/api_rest/resources_composite.htm)

### NEW QUESTION # 34

What type of relationship exists between FulfillmentOrder and Location?

- A. Many-to-One Lookup(Location) FulfilledFrom Location Id
- B. One-to-One Lookup (Location) FulfilledFrom Location
- C. Junction (Many to Many)
- D. One-to-Many Lookup (Location) FulfilledFrom Location Id

**Answer: A**

Explanation:

The type of relationship that exists between FulfillmentOrder and Location is Many-to-One Lookup (Location) FulfilledFrom Location Id. A Lookupfield is a type of custom field that creates a relationship between two objects, but does not support rollup summary fields. A Many-to-One relationship means that many child records can be related to one parent record, but not vice versa. In this case, a FulfillmentOrder has a Lookup field named FulfilledFrom Location Id that references a Location record. A Location is a record that represents a physical location from which order product items are fulfilled, such as warehouses and retail stores. A Location can have many FulfillmentOrders associated with it, but a FulfillmentOrder can only have one Location.
