Trend Micro Certified Professional for Deep Security Sample Questions (Q63-Q68):

NEW QUESTION # 63
Which of the following correctly identifies the order of the steps used by the Web Reputation Protection Module to determine if access to a web site should be allowed?

- A. Checks the cache. 2. Checks the Deny list. 3. Checks the Approved list. 4. If not found in any of the above, retrieves the credibility score from Rating Server. 5. Evaluates the credibility score against the Security Level to determine if access to the web site should be allowed.

- B. Checks the cache. 2. Checks the Approved list. 3. Checks the Deny list. 4. If not found in any of the above, retrieves the credibility score from the Rating Server. 5. Evaluates the credibility score against the Security Level to determine if access to the web site should be allowed.
- C. Checks the Approved list. 2. Checks the Deny list. 3. Checks the cache. 4. If not found in any of the above, retrieves the credibility score from the Rating Server. 5. Evaluates the credibility score against the Security Level to determine if access to the web site should be allowed.
- D. Checks the Deny list. 2. Checks the Approved list. 3. Checks the cache. 4. If not found in any of the above, retrieves the credibility score from Rating Server. 5. Evaluates the credibility score against the Security Level to determine if access to the web site should be allowed.

Answer: C

NEW QUESTION # 64
Your organization stores PDF and Microsoft Office files within the SAP Netweaver platform and requires these documents to be scanned for malware. Which Deep Security component is required to satisfy this requirement?

- A. Deep Security Scanner is required.
- B. No extra components are required, this can be done by enabling the AntiMalware Pro-tection Module on the SAP Netweaver server.
- C. The Netweaver plug-in must be installed on the Deep Security Agent.
- D. A Smart Protection Server must be installed and configured to service the SAP Netweaver platform

Answer: A

Explanation:
Deep Security Scanner provides integration with the SAP NetWeaver platform and performs an-timalware scans and reviews the information to identify potential threats in SAP systems.
Note: Deep Security Scanner is not supported on computers where the Deep Security Agent is enabled as a Relay.
Explication: Study Guide - page (26)

NEW QUESTION # 65
Which of the following statements is true regarding the Intrusion Prevention Protection Module?

- A. The Intrusion Prevention Protection Module analyzes the payload within incoming and outgoing data packets to identify content that can signal an attack.
- B. The Intrusion Prevention Protection Module can identify changes applied to protected objects, such as the Hosts file, or the Windows Registry.
- C. The Intrusion Prevention Protection Module can prevent applications from executing, allowing an organization to block unallowed software.
- D. The Intrusion Prevention Protection Module blocks or allows traffic based on header information within data packets.

Answer: A

Explanation:
deep-security-protection-modules

NEW QUESTION # 66
How does Smart Scan vary from conventional pattern-based anti-malware scanning?

- A. Smart Scan identifies files to be scanned based on the content of the file, not the exten-sion.
- B. Smart Scan improves the capture rate for malware scanning by sending features of suspicious files to an cloud-based server where the features are compared to known malware samples.
- C. Smart Scan shifts much of the malware scanning functionality to an external Smart Protection Server.
- D. Smart Scan is performed in real time, where conventional scanning must be triggered manually, or run on a schedule.

Answer: C

Explanation:

Advantages of the Smart Scan pattern over the conventional pattern protection in OfficeScan (OSCE)

NEW QUESTION # 67

The details for an event are displayed in the exhibit. Based on these details, which Protection Module generated the event?

- A. Firewall
- B. Intrusion Prevention
- C. Integrity Monitoring
- D. Log Inspection

Answer: D

Explanation:
The event details show a "Reason" referencing an Active Directory event (Success Audit), a "Description" that notes "Active directory Success Audit event," and a "Program Name" of "syslogd." This matches the operation of the Log Inspection module, which monitors logs from operating system and application sources and reports events such as authentication failures, system errors, and audit events.
The other modules do not generate events based on log entries in this manner.
