Free PDF Quiz Juniper - JN0-336 - Security, Specialist (JNCIS-SEC) Authoritative Training Materials

We have three packages of the JN0-336 study materials: the PDF, Software and APP online and each one of them has its respect and different advantages. So you can choose as you like accoding to your study interest and hobbies. We strongly advise you to purchase all three packages of the JN0-336 Exam Questions. And the prices of our JN0-336 learning guide are quite favourable so that you absolutely can afford for them.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q11-Q16):

NEW QUESTION # 11
Click the Exhibit button.

Which two statements about the log output shown in the exhibit are correct? (Choose two)

- A. AppTrack is enabled on the untrust zone.

- B. Traffic destined to the HTTP server is placed in an IPsec tunnel
- C. Source NAT is performed
- D. AppTrack is enabled on the trast zone.

Answer: A,D

NEW QUESTION # 12

Click the Exhibit button.

Referring to the exhibit, what will the SRX Series device do in this configuration?

- A. Packets from the infected hosts with a threat level of 8 will be dropped and no log message will be generated.
- B. Packets from the infected hosts with a threat level of 8 will be dropped and a log message will be generated.
- C. Packets from the infected hosts with a threat level of 8 or above will be dropped and a log message will be generated.
- D. Packets from the infected hosts with a threat level of 8 or above will be dropped and no log message will be generated.

Answer: D

Explanation:

The exhibit shows a configuration snippet for security intelligence on an SRX Series device. Security intelligence is a feature that allows you to block or monitor traffic from malicious sources based on threat intelligence feeds from Juniper ATP Cloud or other providers. The configuration defines a profile for ATP Infected-Hosts, which is a feed that contains IP addresses of hosts that are infected with malware and communicate with command-and-control servers. The configuration also defines a rule for threat level 8, which is a parameter that indicates the severity of the threat.

Based on this configuration, the SRX Series device will do the following:

Packets from the infected hosts with a threat level of 8 or above will be dropped: The action block-and- drop under the rule means that the device will block any traffic from the infected hosts that have a threat level equal to or higher than 8. This will prevent the hosts from sending or receiving malicious commands or data.

No log message will be generated: The absence of any log option under the rule means that the device will not generate any log message for the blocked traffic. This may reduce the load on the device and the logging server, but it may also limit the visibility and analysis of the security events. NEW QUESTION # 13

While working on an SRX firewall, you execute the show security policies policy-name <name> detail command.

Which function does this command accomplish?

- A. It displays details about the default security policy.
- B. It shows the system log files for the local SRX Series device.
- C. It shows policy counters for a configured policy.
- D. It identifies the different custom policies enabled.

Answer: C

Explanation:

The function that the show security policies policy-name <name> detail command accomplishes is showing policy counters for a configured policy. Policy counters are statistics that indicate how many times a policy has been matched by traffic and what actions have been taken by the policy. Policy counters can help you monitor and troubleshoot the performance and effectiveness of your security policies. The show security policies policy-name <name> detail command displays detailed information about a specific policy, such as its source zone, destination zone, description, state, hit count, byte count, packet count, action count, and session count.

NEW QUESTION # 14

Click the Exhibit button.

Which two statements about the log output shown in the exhibit are correct? (Choose two?

- A. Traffic destined to the HTTP server is placed in an IPsec tunnel

- B. Source NAT is performed
- C. AppTrack is enabled on the untrust zone
- D. AppTrack is enabled on the trost zone:

Answer: B,D

NEW QUESTION # 15
Exhibit

You are asked to ensure that servers running the Ubuntu OS will not be able to update automatically by blocking their access at the SRX firewall. You have configured a unified security policy named Blockuburrtu, but it is not blocking the updates to the OS. Referring to the exhibit which statement will block the Ubuntu OS updates?

- A. Move the Blockubuntu policy after the Allowweb policy.
- B. Change the default policy to permit-all.
- C. Configure the Blockubuntu policy with the junos-https application parameter.
- D. Configure the Allowweb policy to have a dynamic application of any.

Answer: C

NEW QUESTION # 16
......

To be the best global supplier of electronic JN0-336 study materials for our customers through innovation and enhancement of our customers' satisfaction has always been our common pursuit. The advantages of our JN0-336 study guide are more than you can count. As the most important factor that our worthy customers will consider-the pass rate, we are proud to tell you that we have a pass rate high as 98% to 100% on our JN0-336 training engine, which is also unique in the market. And our price of the JN0-336 practice guide is also reasonable.
